Amazon Seller Data Access

Seller and third-party access to Amazon Seller (business user) data.

Sellers that have a professional selling account and authorized third parties that are registered as Selling Partner API (SP-API) developers can use the SP-API to programmatically access Amazon's Seller data (also referred to as business user data), including customers' data. Through SP-API, sellers and authorized third parties have access to various tools and downloadable reports that include listings, returns, inventory, orders, product recommendations, payments, feedback, and analytics. Sellers can also access the data directly on [Seller Central](#).

Selling Partner API Roles >

Amazon also provides sellers and authorized third parties access to an [End User Data Report](#), which offers access to data that is generated by end users (customers) through their use of our stores.

Note

The [End User Data Report](#) is available for the following [stores](#):
Ireland,
Spain,
France,
Belgium,
Netherlands,
Germany,
Italy,
Sweden, and
Poland.

Connect to SP-API

For programmatic access to business user data (including the [End User Data Report](#)), you must complete the following SP-API onboarding steps.

Tip

If you are a Seller that wants to use SP-API for your

[Policies and Agreements](#)[About Facial Data](#)

AUTHORIZATION

business, but do not want to self-manage, you can have an authorized SP-API developer operate on your behalf. You must authorize the developer using [Login with Amazon](#), which is Amazon's implementation of OAuth 2.0. For more information, refer to steps 3 through 5 below.

Step 1. Register as an SP-API developer

If you want to integrate with the SP-API, you must first register as a private developer.

You only need to register as a developer once, in any [region and store](#), to have continuous access to the SP-API. As part of registration, you must complete a Developer Profile. The Developer Profile collects the following:

Step 2. Register your Selling Partner application

After you register as a private SPI-API developer, you can register a private application. Private applications are only available to your organization. For more information, refer to [Register your application](#).

Step 3. Authorize your application

After you register a private application, you can self-authorize your application. For more information, refer to [Self Authorization](#).

SECURITY AND COMPLIANCE

SP-API Security and Compliance Overview

Amazon Selling Partner API Guard Implementation Guide 

If you are a Seller who chooses to work with an authorized SP-API third party developer, you can use the workflows described in [How is my application authorized?](#) to authorize their public application. The authorization model for SP-API is based on [Login with Amazon](#).

Step 4. Access the SP-API

If you have a private application, you can connect to SP-API using the [Login with Amazon](#) refresh token that you obtained during your self-authorization.

If you have an authorized third party public application, the authorized SP-API third party developer can make calls to SP-API on your behalf.

Step 5. Call the SP-API

The SP-API provides [two sandbox environments](#) that you can use to test your applications without affecting your production data or triggering real-world events:

- **Static sandbox:**
Uses pattern matching to return

static, mocked responses.

- **Dynamic sandbox:**
Routes requests to a sandbox backend that can return realistic responses based on the request parameters. The dynamic sandbox is supported for select APIs.

To learn how to call SP-API endpoints, refer to the [Test Selling Partner API Endpoints](#) tutorial.

To access business user data, you have three options:

- Programmatically access business user data with the SP-API.

If you are a Seller with a private application or an authorized SP-API third party, you have access to [data and functionalities](#) through the SP-API, which includes inventory management, order handling, pricing, payments, and reporting.

- Access business user data on Seller Central.

If you are an authorized third party, you can access business user data subject to applicable EU law via Seller Central, including the End User Report, using Seller-managed authorized access free of charge. Business user data is available for the

following stores:

Ireland, Spain, France, Belgium, Netherlands, Germany, Italy, Sweden, and Poland. Access to business user data is subject to permissions to specific features and data categories that Sellers grant to access on Seller Central.

- Request the [End User Data Report](#).

The [End User Data Report](#) provides access to end user (customer) data, including contact information, page view (glance view), and order data for customers who have elected to share this data with specific sellers. This data is accessible across various reporting periods, including DAY , WEEK , and MONTH . You can define start and end dates, along with the desired reporting period for data retrieval and aggregation.

If no customers elect to share their data, the [End User Data Report](#) is empty.

To programmatically access [End User Data Report](#) data, use the [Reports API](#) and specify `END_USER_DATA_REPORT` for the `reportType` parameter. Use the pre-signed URL in the `getReportDocument` operation response to download your requested data.

For more information about requesting, scheduling, and retrieving a report, refer to the [Reports API Use Case Guide](#).

Additional support

If you need help with your request, or if you have questions related to data access, contact [Developer Support](#).
