What is the Selling Partner API?

Selling Partner API Onboarding Overview

Terminology

Frequently Asked Questions

Analytics Reports

Analytics Reports for the Selling Partner Reports API.

Brand Analytics reports

Search Catalog Performance Report

reportType value:
GET_BRAND_ANALYTICS
_SEARCH_CATALOG_PER
FORMANCE_REPORT

Schema:
[sellingPartnerSearchCatalogPerformanceReport.json](#)

Role: [Brand Analytics](#)

Availability: Sellers who have the Brand Analytics Selling Partner API role and are registered in [Amazon Brand Registry](#).

Marketplace availability: NA (all marketplaces), EU (Spain, United

Kingdom, France, Netherlands, Germany, Italy, Sweden, Turkey, Saudi Arabia, United Arab Emirates, India), FE (all marketplaces).

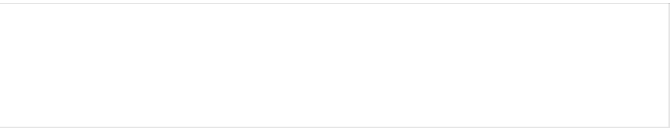

Requested/scheduled:
This report can only be requested.

Report output type:
JSON

Provides search engagement metrics such as impressions, clicks, cart adds, and purchases for a specified date range. Data is available at different reporting periods: WEEK , MONTH , and QUARTER . Requests cannot span multiple periods. For example, a request at WEEK level could not start on 2025-01-05 and end on 2025-01-18 as this would span two weeks.

This report accepts the following `reportOptions` values:

- `asins` (Optional)
- A space-separated list of Amazon Standard Identification Numbers (ASINs) for which you can request the report.
- `reportPeriod` (Required) -

Reports API FAQ

SALES API

Sales API >

SELLER WALLET API

Seller Wallet API >

The marketplace data for the Vendor Retail Analytics reports follows PST irrespective of the vendor's location or the marketplace's local time zone.

Contains inventory data at an ASIN level, aggregated to an hourly granularity. Requests can span multiple date range periods, including the current day.

ASINs are included if the number of units available for purchase by customers has changed. In addition to orders and cancellations, other activities which could impact the number of units available for purchase include add-to-cart actions, processed Subscribe-and-Save orders, and new quantities being made available.

The lowest granularity of rapid retail analytics is hourly. Reports can be requested minutes after the close of an

hour, with specific thresholds based on the dataset. For inventory, information can be requested five minutes after the close of each hour. For example, you can request 8:00 AM - 9:00 AM at 9:05 AM.

Rapid retail analytics represents cancellations based on the time of the cancellation.

The lookback window for this report is 30 days and the maximum date span is 7 days. For example, if you wanted to query February 2024, you would request four report date ranges:

- Feb 1 - Feb 7
- Feb 8 - Feb 14
- Feb 15 - Feb 21
- Feb 22 - Feb 28

Available to sellers and vendors as the ITEM_INVENTORY_EVENT_CHANGE notification.

**Note**

The Glance Views count in the

GET_VENDOR
_REAL_TIME
_TRAFFIC_R
EPORT

is not the same as the Glance Views count in the [Vendor Central](#) dashboard.

They use different count systems based on their different time requirements . The

GET_VENDOR
_REAL_TIME
_TRAFFIC_R
EPORT

outputs data as close to real-time as possible, but is less accurate than the [Vendor Central](#) dashboard for concluded days.

Contains data on the customer traffic to the

VENDOR RETAIL PROCUREMENT TRANSACTION STATUS API

Vendor Retail Procurement Transaction Status API >

detail pages of the vendor's items with an hourly granularity. Requests can span multiple date range periods. For example, if the customer specified that `dataStartTime` and `dataEndTime` span three hours, the report would contain data for each complete hour within the time span.

The report payload includes ASINs whose product detail page received glance views during that period where a given merchant is the featured offer, including when multiple offers for the same merchant are shown (for example, Subscribe and Save, used products, buy on Fresh). Glance Views (GVs) are calculated at the ASIN-level, and only when retail is the featured merchant.

The lowest granularity of rapid retail analytics is hourly. Traffic data is available approximately 65 to 115 minutes after the close of an hour. For example, you can request 8:00 AM – 9:00 AM traffic data at 10:05 AM.

The lookback window for this report is 30

days and the maximum date span is 14 days. For example, if you wanted to query February 2024 you would request two report date ranges:

- Feb 1 - Feb 14
- Feb 15 - Feb 28

Available to sellers and vendors as the

[DETAIL](#) [PAGE](#) [TRAFFIC](#)

Rapid Retail Analytics Sales Report

reportType Value:

GET_VENDOR_REAL_TIME_SALES_REPORT

Schema:

[vendorRealTimeSalesReport](#)

Role: [Brand Analytics](#)

Availability: Vendors

Requested/scheduled:

This report can only be requested.

Report output type:

JSON

Note

The universal default time zone for the

marketplace data in the Vendor Retail Analytics reports is Pacific Standard Time (PST). The marketplace data for the Vendor Retail Analytics reports follows PST irrespective of the vendor's location or the marketplace's local time zone.

Contains sales data at an ASIN level, aggregated to an hourly granularity. Requests can span multiple date range periods. For example, if the customer specified that `dataStartTime` and `dataEndTime` span three hours, the report would contain data for each complete hour within the time span.

ASINs are included when they have orders or cancellations during a given hour.

The lowest granularity of rapid retail analytics

is hourly. Reports can be requested five minutes after the close of each hour. For example, you can request 8:00 AM - 9:00 AM at 9:05 AM.

Rapid retail analytics represents cancellations based on the time of the cancellation. To represent cancellations, ordered units may be negative for a given hour and ASIN combination.

The lookback window for this report is 30 days and the maximum date span is 14 days. For example, if you wanted to query February 2024 you would request two report date ranges:

- Feb 1 - Feb 14
- Feb 15 - Feb 28

Available to sellers and vendors as the

ITEM SALES_EVENT_CH
ANGE notification.

★ Tip

To calculate conversion, use the following equation:

- Conversion =
ordered

units /
glance
views

attributes.](#)

Vendor Sales Report

reportType Value:

GET_VENDOR_SALES_RE
PORT

Schema:

[vendorSalesReport](#)

Role: [Brand Analytics](#)

Availability: Vendors

Requested/scheduled:

This report can only be requested.

Report output type:

JSON

Note

The universal default time zone for the marketplace data in the Vendor Retail Analytics reports is Pacific Standard Time (PST). The marketplace data for the Vendor Retail Analytics

reports
follows PST
irrespective
of the
vendor's
location or
the
marketplace'
s local time
zone.

Contains key retail sales metrics such as ordered/shipped revenue and units. Data is reported at the aggregate level across a vendor's catalog of items and at the ASIN level across `DAY` , `WEEK` , `MONTH` , `QUARTER` , and `YEAR` reporting periods.

★ Tip

To calculate average sale price, use the following equation:

- Average sale price = shipped revenue / shipped units

This report accepts the following `reportOptions` value:

- `reportPeriod` - Specifies the reporting period

for the report.

Values include

DAY , WEEK ,
MONTH , QUARTER ,
and YEAR .

Example:

```
"reportOptions"
:
{"reportPeriod":
"WEEK"}
```

- distributorView - Specifies the distributor view requested. Values include

MANUFACTURING
and SOURCING .

Example:

```
"reportOptions"
:
{"distributorView": "SOURCING"}
```

- sellingProgram - Specifies the Amazon selling program for the report. Values include RETAIL , BUSINESS , and FRESH . Example:

```
"reportOptions"
:
{"sellingProgram": "RETAIL"} .
```

Requests must include the reportPeriod , distributorView , and sellingProgram properties. Use the dataStartTime and dataEndTime parameters to specify the date boundaries for the report. The dataStartTime and

`dataEndTime` values must correspond to valid first and last days in the specified `reportPeriod` . For example, `dataStartTime` must be a Sunday and `dataEndTime` must be a Saturday when `reportPeriod=WEEK` .

Note

`distributo
rView:
MANUFACTUR
ING`

provides data for ASINs of items manufactured by you, regardless of who sourced the products to Amazon.

`distributo
rView:
SOURCING`

provides data for ASINs of items sourced directly from your vendor group.

Maximum lookback windows: The maximum lookback windows (from the current date) that are available for each `reportPeriod` type. Specify a

`dataStartTime`

parameter that falls within the maximum lookback window for the reporting period that you want:

- **DAY:** 1,460 days
- **WEEK:** 7 weeks
- **MONTH:** 36 months
- **QUARTER:** 8 quarters
- **YEAR:** 3 years

Maximum reporting periods: The maximum reporting periods that you can specify using the `dataStartTime` and `dataEndTime` parameters, by `reportPeriod` type:

- **DAY:** 15 days
- **WEEK:** 7 weeks
- **MONTH:** 15 months
- **QUARTER:** 4 quarters
- **YEAR:** 2 years

Data availability: The Service Level Agreement (SLA) for weekly reporting periods (for example, Saturday datasets) is the end of the day Monday, 48 hours after the close of the period. The SLA for non-Saturday daily reporting periods is 72 hours after the close of

the period. If you request a report for a reporting period that is not yet available, the report will not be generated and `processingStatus` for the report will be FATAL. You can get the processing status of the report by polling the `getReport` operation of the Reports API. For more information, refer to the [Reports API Use Case Guide](#).

Data availability: The SLA for the weekly reporting periods (for example, Saturday datasets) is the end of the day Monday, 48 hours after the close of the period. The SLA for non-Saturday daily reporting periods is 72 hours after the close of the period. If you request a report for a reporting period that is not yet available, the report will not be generated and `processingStatus` for the report will be *FATAL*. You can get the processing status of the report by polling the `getReport` operation of the Reports API. For more information, see the [Reports API Use Case Guide](#).

Vendor Forecasting Report

reportType Value:

GET_VENDOR_FORECAST
ING_REPORT

Schema:

[vendorForecastingReport](#)

Role: [Brand Analytics](#)

Availability: Vendors

Requested/scheduled:

This report can only be requested.

Report output type:

JSON

Note

The universal default time zone for the marketplace data in the Vendor Retail Analytics reports is Pacific Standard Time (PST). The marketplace data for the Vendor Retail Analytics reports follows PST irrespective of the vendor's location or the marketplace'

s local time zone.

Contains forward looking mean, Prior 70, Prior 80, and Prior 90 weekly customer demand forecasts. Data is reported at the ASIN level for the most recent weekly forecast generation date.

Note

Only the most recent forecast data is available. Historical forecast data cannot be requested.

Note

The forecasting system produces forecasts for an ASIN at various P-levels, also known as confidence levels. If you are setting a forecasting P-level of .80 (P80), it means that there is an 80% probability

customer demand will not exceed the weekly forecasted units.

Note

You can only request the Vendor Forecasting Report one marketplace at a time. If you request this report for more than one marketplace, Amazon generates an error. For example, if you request this report for nine marketplaces , Amazon generates the following

```
error:
  "errorDetails" :
    "Error in
    report
    request:
    There were
    9
    marketplaces in the
    request,
    but only 1
    is
    supported.
    "
```

This report accepts the following

`reportOptions` value:

- `sellingProgram`
- Specifies the Amazon selling program for the report. Values include `RETAIL` and `FRESH`.

Example:

```
"reportOptions"
:
{"sellingProgram
": "RETAIL"}
```

Data availability:

Refreshed forecasting data is available within a 72-hour time frame after the week end.

Vendor Inventory Report

reportType Value:

GET_VENDOR_INVENTOR
Y_REPORT

Schema:

[vendorInventoryReport](#)

Role: [Brand Analytics](#)

Availability: Vendors

Requested/scheduled:

This report can only be requested.

Report output type:

JSON

**Note**

The universal default time zone for the marketplace data in the Vendor Retail Analytics reports is Pacific Standard Time (PST). The marketplace data for the Vendor Retail Analytics reports follows PST irrespective of the vendor's location or the marketplace's local time zone.

Contains inventory and operational health metrics such as sellable on hand units and vendor confirmation rate.

Data is reported at the aggregate level across a vendor's catalog of items and at the ASIN level across `DAY`, `WEEK`, `MONTH`, `QUARTER`, and `YEAR` reporting periods.

This report accepts the following

`reportOptions` values:

- `reportPeriod` (Required) - Specifies the reporting period for the report. Values include `DAY`, `WEEK`, `MONTH`, `QUARTER`, and `YEAR`. Example:

```
"reportOptions":
{
  "reportPeriod": "WEEK"
}
```
- `distributorView` (Required) - Specifies the distributor view requested. Values include `MANUFACTURING` and `SOURCING`. Example:

```
"reportOptions":
{
  "distributorView": "SOURCING"
}
```

- `sellingProgram`
(Required) -
Specifies the
Amazon selling
program for the
report. Values
include `RETAIL`
and `FRESH` .
Example:

```
"reportOptions":  
:  
{"sellingProgram": "RETAIL"}
```

Use the

`dataStartTime` and
`dataEndTime`

parameters to specify
the date boundaries for
the report. The

`dataStartTime` and
`dataEndTime` values

must correspond to
valid first and last days
in the specified

`reportPeriod` . For

example,

`dataStartTime` must
be a Sunday and
`dataEndTime` must be
a Saturday when
`reportPeriod=WEEK` .

Note

`distributo
rView:
MANUFACTUR
ING`

provides data
for ASINs of
items
manufacture
d by you,
regardless of
who sourced
the products

to Amazon.
distributo
rView:
SOURCING
provides data
for ASINs of
items
sourced
directly from
your vendor
group.

Maximum lookback

windows: The maximum lookback windows (from the current date) that are available for each `reportPeriod` type. Specify a

`dataStartTime` parameter that falls within the maximum lookback window for the reporting period that you want:

- **DAY:** 1,460
- **WEEK:** 7 weeks
- **MONTH:** 36 months
- **QUARTER:** 8 quarters
- **YEAR:** 3 years

Maximum reporting

periods: The maximum reporting periods that you can specify using the `dataStartTime` and `dataEndTime` parameters, by `reportPeriod` type:

- **DAY:** 15

- **WEEK:** 7 weeks
- **MONTH:** 15 months
- **QUARTER:** 4 quarters
- **YEAR:** 2 years

Data availability:

Refreshed data is available 72 hours after the close of the period. For example, weekly data (Sunday through Saturday dataset) is available by the end of the day Tuesday.

Seller retail analytics reports

Sales and Traffic Business Report

reportType Value:

GET_SALES_AND_TRAFF

IC_REPORT

Schema:

[sellerSalesAndTrafficReport](#)

Role: [Brand Analytics](#)

Availability: Sellers

Requested/scheduled:

This report can be requested or scheduled.

Note

You can request this report up to three times every five minutes. To avoid an HTTP 429 response:

- Wait one minute before retrying your request. Double your wait time for every subsequent retry.
- Cache results locally rather than re-requesting the same date ranges.
- Use date ranges between 7 and 30 days to reduce processing time.
- Schedule reports outside peak hours.

For more information, refer to [HTTP 429 Too Many Requests.](#)

Report output type:
JSON

Contains key sales performance metrics such as ordered product sales, revenue, units ordered, and claim amount, as well as page traffic metrics such as page views and buy box percentage of the seller's entire catalog of items aggregated by date and ASIN. The `GET_SALES_AND_TRAFFIC_REPORT` also includes comprehensive B2B-specific metrics to help analyze business buyer engagement separately from consumer traffic.

Note

The `dataStartTime` value provided when requesting this report must not be more than two years before the date of the

request. If you fail this condition, the request will be cancelled.

This report accepts the following

`reportOptions`

values:

- `dateGranularity` - Data is available at different date range aggregation levels: `DAY`, `WEEK`, `MONTH`. Default: `DAY`.
- `asinGranularity` - Data is available at different ASIN aggregation levels: `PARENT`, `CHILD`, `SKU`. Default: `PARENT`.

Example:

```
"reportOptions":
{"dateGranularity":
"MONTH",
"asinGranularity":
"CHILD"}
```

When

`dateGranularity` is `WEEK` or `MONTH` the `dataStartTime` and `dataEndTime` values are expanded to that level of granularity. For `WEEK` the beginning is Sunday and the end is Saturday, and for

`MONTH` the beginning is the first day of the month and the end is the last day of the month.

For example, if the `dateGranularity` value is `WEEK` and the provided `dataStartTime` value is on a Tuesday, that `dataStartTime` value will automatically be changed to the Sunday before that Tuesday. Likewise, if a `dataStartTime` value of 3/16/2021 and a `dataEndTime` of 4/16/2021 are provided with a `dateGranularity` of `MONTH`, the `dataStartTime` will become 3/1/2021 and the `dataEndTime` will become 4/30/2021.

If the expanded `dataStartTime` value is more than two years before the date of the request, then it will be corrected to be within two years of the request date provided the original `dataStartTime` is with two years of the request date. If the expanded `dataEndTime` value is in the future, then the report will contain partial data for the

most recent report
period.
