What is the Selling Partner API?

Selling Partner API Onboarding Overview >

Authorization with the Restricted Data Token

Learn how to authorize SP-API operations that access restricted data.

Some Selling Partner API (SP-API) operations access sensitive information, such as personally identifiable information (PII). These operations are classified as *restricted operations* and require enhanced security through Restricted Data Tokens (RDTs).

Prerequisites for Using RDTs

Before you can request an RDT:

- Obtain the required restricted role access. For details about roles, refer to [Selling Partner API Roles](#).

Terminology

Frequently Asked Questions >

CHANGELOG[SP-API Release Notes](#)[SP-API Deprecation Schedule](#)[SP-API Product Metadata Updates](#)**DIRECTORIES**[SP-API Models](#)[SP-API Seller Use Cases](#)[SP-API Vendor Use Cases](#)[Seller Central URLs](#)[Vendor Central URLs](#)**REGISTRATION**[SP-API Registration Overview](#)

- Ensure that your application needs to perform functions that require PII access, such as shipping, tax invoicing, and so on. To determine whether your application needs restricted operations, browse [Role Mappings for SP-API Operations](#) and [Role Mappings for SP-API Types](#) to see if the required roles are marked as restricted.

How to get an RDT

There are two ways to get an RDT:

- For most applications: Call the [createRestrictedDataToken](#) operation of the Tokens API with a Login with Amazon (LWA) access token.
- For delegatee applications: Receive an RDT from the delegator application that your application is integrated with.

For more details on these methods, including delegation,

INTEGRATION

[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#)

>

refer to the [Tokens API Use Case Guide](#).

How to use an RDT

To use an RDT:

1. Instead of using an LWA access token, pass the RDT in the `x-amz-access-token` header when you call a restricted SP-API operation.
2. Follow the standard process to [add headers to the URI](#), but substitute the RDT for the usual access token.

Important considerations

When you use RDTs, keep the following considerations in mind:

- RDTs are specific to restricted operations and cannot be used for standard SP-API calls.
- Ensure that your application handles RDTs securely due to their access to sensitive data.
