Authorize Applications

Learn how to authorize SP-API applications.

Authorization is the process by which a selling partner grants your application permission to call the Selling Partner API (SP-API) on the selling partner's behalf. For example, when a selling partner authorizes your order management application, they give your application permission to retrieve their order data through the SP-API.

After the authorization process is complete, your application can obtain the credentials that the SP-API requires for each API call.

This topic provides an overview of the available authorization methods and refers you to the relevant documentation based

on the method that you choose.

Authorization methods

Your authorization method choices depend on whether your application is public or private. The following section summarizes the authorization methods. For details, refer to the specified documentation.

Public applications

Public applications are available to multiple selling partners through the selling partner's website or through the [Selling Partner Appstore](#). The following information summarizes the available authorization methods for public applications:

- **Authorization method:** [OAuth 2.0](#) through [Login with Amazon](#) (LWA).
- **Who authorizes the application:** The selling partner.
- **Initial authorization flow:** The selling partner starts either from [your website](#) or from the [Selling Partner Appstore](#). Through

browser redirects, the selling partner interacts with both Amazon and your website to complete the authorization process.

- **Authorization renewal:** Renewal is required annually or if you want existing users (sellers or vendors) to authorize new roles for your application. To [renew authorization](#), the selling partner starts at the **Manage Your Apps** page in Seller Central.
- **Developer implementation needed?** Yes. You must implement an authorization and a reauthorization flow. The implementation involves setting up an OAuth login URI, an OAuth redirect URI, and so on.
- **Documentation:**

Private applications

Private applications are for exclusive use by a single organization. The following information summarizes the available authorization methods for private applications:

- **Authorization method:** Self-authorization.
- **Who authorizes the application:** You.
- **Initial authorization flow:** You perform a [self-authorization](#) process through Seller Central, Vendor Central, or the Solution Provider Portal.
- **Authorization renewal:** Renewal is required when you add new roles. You perform the [self-authorization](#)

process through Seller Central, Vendor Central, or the Solution Provider Portal.

- **Developer implementation needed?** No. You can perform authorization through one of the tools mentioned previously.

• Documentation:

- [Authorize Private Applications](#)
- [Revoke Self-Authorizations](#)
- [Authorization Limits](#)

Note

If you encounter issues while authorizing a Selling Partner API (SP-API) application, refer to [Authorization error codes](#) for troubleshooting steps and common error explanations.

Special cases

The following documentation applies to special cases:

- **Grantless operations:** You can call some operations without explicit authorization from a selling partner. These operations are called *grantless operations*. For details, refer to [Grantless Operations](#).

VAT Calculation Service

>

- **Vendor groups:** For vendor applications, authorization applies to the group of vendor codes that are associated with the sign-in credentials for your Vendor Central account. For details about how to handle this case, refer to [Authorize your Application to Access Vendor Groups](#).
