Check the status of an Easy Ship package

Learn how to use the Easy Ship API to check the status of an Easy Ship package.

Learn how to use the Easy Ship API to check the status of an Easy Ship package. This operation allows a seller to view the specified weight, dimensions, time slot, and other details of an Easy Ship package.

The status of a package is updated as events occur for the package. Examples of a few such events include:

- A package is provided to an Amazon carrier.
- A package has been delivered to a buyer.
- A package has been cancelled.
- A package was lost in transit.

Selling Partner API Roles

It is useful to check the current status of a package before rescheduling because packages cannot be rescheduled after they have been given to an Amazon carrier. If you run a rescheduling operation on an Easy Ship package that is in an invalid state, the operation will fail and return an

`InvalidOrderState`

code. For all the different states of a package, refer to [packageStatus](#).

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role assigned to your developer profile.
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role selected in the app registration page
