Connect to the Selling Partner API Using a Generated C# SDK

Connect to the SP-API using a generated C# SDK.

This tutorial describes how to use a generated C# Software Developer Kit (SDK) to make API calls. The SDK exposes classes for configuring your Login with Amazon (LWA) credentials and uses them to generate LWA tokens and sign requests for you. For more information, refer to [Tutorial: Automate your SP-API Calls Using a C# SDK](#).

Before your application can connect to the Selling Partner API (SP-API), you must register it and a selling partner must authorize it. Refer to [Registering your application](#) and [Authorizing Selling Partner API applications](#).

You must also install the following dependencies using NuGet in [Visual Studio](#):

- JsonSubTypes 1.2.0 or newer
- Newtonsoft.json 12.0.3 or newer
- RestSharp 106.12.0
- RateLimiter 2.2.0 or newer (this will also install ComposableAsync.Core)

Step 1. Configure your LWA credentials

Create an instance of `LWAAuthorizationCredentials` using these parameters:

Name	Description	Required
ClientId	Your LWA client identifier. For more information, refer to Viewing your application information and credentials .	Yes
ClientSecret	Your LWA client secret. For more information, refer to Viewing your application information and credentials .	Yes

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

Name	Description	Required
RefreshToken	The LWA refresh token. Get this value when the selling partner authorizes your application. For more information, refer to Authorizing Selling Partner API applications .	No. Include RefreshToken if the operation that you call in the following step requires selling partner authorization. All operations that are not grantless operations require selling partner authorization. If you include RefreshToken, do not include Scopes.
Scopes	The scope of the LWA authorization grant. Takes the value ScopeNotificationsAPI for the Notifications API .	No. Include Scopes if the operation that you call in the following step is a grantless operation . If you include Scopes, do not include the RefreshToken.
Endpoint	The LWA authentication server URI.	Yes

Example of an operation call that requires selling partner authorization:

C#

```
using Amazon.SellingPartnerAPIAA;
LWAAuthorizationCredentials lwaAuthorizationCredentials =
new LWAAuthorizationCredentials
{
    ClientId = "myClientId",
    ClientSecret = "myClientSecret",
    RefreshToken = "Aztr|...",
    Endpoint = new
Uri("https://api.amazon.com/auth/o2/token")
};
```

Example of a grantless operation call:

C#

```
using Amazon.SellingPartnerAPIAA;
LWAAuthorizationCredentials lwaAuthorizationCredentials =
new LWAAuthorizationCredentials
{
    ClientId = "myClientId",
    ClientSecret = "myClientSecret",
    Scopes = new List<string>() {
ScopeConstants.ScopeNotificationsAPI,
ScopeConstants.ScopeMigrationAPI
    },
    Endpoint = new
Uri("https://api.amazon.com/auth/o2/token")
};
```

Step 2. Create an instance of the Sellers API and call an operation

After you configure your `LWAAuthorizationCredentials`, you can create an instance of `SellersApi` and call an operation.

CALLING THE SP-API

Configuration Details >

Call Structure >

Development Tools >

Performance Management >

Example:

C#

```
SellersApi sellersApi = new SellersApi.Builder()
    .SetLWAAuthorizationCredentials(lwaAuthorizationCredentials)
    .Build();
```

Troubleshoot a C# SDK

Restsharp errors: " IRestRequest is defined in an assembly that is not referenced. You must add a reference to assembly RestSharp Version=105.0.0.0. Culture=neutral. PublicKeyToken=598062e77f915f75 "

▶ [Select to expand the answer.](#)

"The type or namespace name 'Newtonsoft' could not be found (are you missing a using directive or an assembly reference?)"

▶ [Select to expand the answer.](#)

"Message : Could not load type of field SellingPartnerAPI.servicesApi.Client.ApiClient:rateLimiter (3) due to : Could not load file or assembly ComposableAsync.Core, Version=1.1.1.0, Culture=neutral, PublicKeyToken=null or one of its dependencies."
