# Connecting to the Selling Partner API Using a Generated Java SDK

How to connect to the SP-API using a generated Java SDK.

Before your application can connect to the Selling Partner API (SP-API), you must register it, and it must be authorized by a selling partner. Refer to [Registering your application](#) and [Authorizing Selling Partner API applications](#).

These instructions show you how to use a generated Java SDK to make calls. The SDK exposes classes for configuring your Login with Amazon (LWA) credentials and uses them to generate LWA tokens and sign requests for you. For more information, refer to [Generate a Java SDK](#).

## Step 1. Configure your LWA credentials

Create an instance of `LWAAuthorizationCredentials` , using the following parameters:

| Name                      | Description                                                                                                                                                                               | Required                                                                                                                                                                                                                                                                                                                       |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>clientId</code>     | Your LWA client identifier. For more information, refer to <a href="#">Viewing your developer information</a> .                                                                           | Yes                                                                                                                                                                                                                                                                                                                            |
| <code>clientSecret</code> | Your LWA client secret. For more information, refer to <a href="#">Viewing your developer information</a> .                                                                               | Yes                                                                                                                                                                                                                                                                                                                            |
| <code>refreshToken</code> | The LWA refresh token. Get this value when the selling partner authorizes your application. For more information, refer to <a href="#">Authorizing Selling Partner API applications</a> . | No. Include <code>refreshToken</code> if the operation that you call in the following step requires selling partner authorization. All operations that are not <a href="#">grantless operations</a> require selling partner authorization. If you include <code>refreshToken</code> , do not include <code>withScopes</code> . |
| <code>withScopes</code>   | The scope of the LWA authorization grant. Takes the value <code>ScopeNotificat</code>                                                                                                     | No. Include <code>withScopes</code> if the operation that you call in the following step is a <a href="#">grantless</a>                                                                                                                                                                                                        |

| Name     | Description                                         | Required                                                                                                        |
|----------|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
|          | ionsAPI for the <a href="#">Notifications API</a> . | <a href="#">operation</a> . If you include <code>withScopes</code> , do not include <code>refreshToken</code> . |
| endpoint | The LWA authentication server URI.                  | Yes                                                                                                             |

Example for calling operations that require selling partner authorization:

Java

```
import
com.amazon.SellingPartnerAPIAA.LWAAuthorizationCredentials;

LWAAuthorizationCredentials lwaAuthorizationCredentials =
LWAAuthorizationCredentials.builder()
    .clientId("myClientId")
    .clientSecret("myClientSecret")
    .refreshToken("Aztr|...")
    .endpoint("https://api.amazon.com/auth/o2/token")
    .build();
```

Example for calling grantless operations:

Java

```
import
com.amazon.SellingPartnerAPIAA.LWAAuthorizationCredentials;
import static
com.amazon.SellingPartnerAPIAA.ScopeConstants.SCOPE_NOTIFICATIONS_API;
import static
com.amazon.SellingPartnerAPIAA.ScopeConstants.SCOPE_MIGRATION_API;

LWAAuthorizationCredentials lwaAuthorizationCredentials =
LWAAuthorizationCredentials.builder()
    .clientId("myClientId")
    .clientSecret("myClientSecret")
    .withScopes(SCOPE_NOTIFICATIONS_API, SCOPE_MIGRATION_API)
    .endpoint("https://api.amazon.com/auth/o2/token")
    .build();
```

## Step 2. Create an instance of the Sellers API and call an operation

With your `LWAAuthorizationCredentials` instances configured you can create an instance of `SellersApi` and call an operation.

Example:

Java

```
SellersApi sellersApi = new SellersApi.Builder()
    .lwaAuthorizationCredentials(lwaAuthorizationCredentials)
    .endpoint("https://sellingpartnerapi-na.amazon.com")
    .build();
```
