## GET STARTED

Welcome to SP-API Documentation

What is the Selling Partner API?

Selling Partner API Onboarding Overview &gt;

# Create a return for an MCF order

Learn how to create a return for an MCF order.

MCF order returns are comprised of three steps:

1. Getting the return reason codes
2. Submitting the return using one of the codes
3. Returning the object

Currently, MCF expects the end customer to pay for the postage charges as the return labels shared are not prepaid.

## Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. Refer to [Authorizing](#)

Terminology

Frequently Asked Questions &gt;

[Selling Partner API Applications](#) for more information.

- The [Amazon Fulfillment role](#) assigned to your developer profile.
- The [Amazon Fulfillment role](#) selected in the App registration page for your application.

## Step 1. Get a list of return reason codes for a given product

Call the `listReturnReasonCodes` operation.

## Step 2. Create a fulfillment return for an order

Using one of the reasons retrieved in the previous step, call the `createFulfillmentReturn` operation to submit the return request and retrieve the return shipping label needed to ship the item to Amazon.

### Note

This label is not prepaid.

## AUTHORIZATION

[Authorize Applications](#)[Renew Authorizations](#)[Revoke Authorizations](#)[Authorization Limits](#)[Special Authorization Types](#)

## INTEGRATION

[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#)

It must be  
paid by the  
shipper.

### > **Step 3. Ship the returning item**

From the previous response, the

`rmaPageURL` provides the return label which needs to be printed and pasted on the package and the postage charges need to be paid by the returning shopper.

### > **Step 4. Get the fulfillment order to validate the order return**

After the package is received by the Amazon warehouse, the item is marked returned for that order. Call the [getFulfillmentOrder](#) operation to validate that the return authorization is populated on the original order. `returnItems` and `returnAuthorizations` should populate the same details as the `createFulfillmentReturn` response along with the status/condition of the item returned.
