Create an order in hold status and then move it to shipped

Learn how an order can move from a fulfillment status of **HOLD** to **SHIP**.

Learn how an order can move from a fulfillment status of **HOLD** to **SHIP**. Orders in **HOLD** status do not proceed to further fulfillment actions until the status is updated to **SHIP**.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. Refer to [Authorizing Selling Partner API Applications](#) for more information.
- The [Amazon Fulfillment role](#) assigned to your developer profile.
- The [Amazon Fulfillment role](#) selected in the App registration page for your application.

Step 1. Get the fulfillment preview

Call the `getFulfillmentPreview` operation on the order to ensure the SKUs are eligible and fulfillable for the requested ship options (Standard, Expedited, Priority).

An unsuccessful response has a non-2xx code and includes the following objects. A 404 response provides the ineligibility errors, if any.

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Create an order in hold status and then move it to shipped

Step 2. Create a fulfillment order on hold

Call the `createFulfillmentOrder` operation with one or more line items with `fulfillmentAction` set equal to `Hold`. Doing so keeps the order in `Hold` status and further fulfillment actions don't run on that order.

Important

The `Hold` state overrides the `FillAll` fulfillment policy. `Hold` orders are automatically canceled after 14 days. If you use the `FillAll` policy with the `Ship` state, and there are unshipped items, then the order becomes `Unfulfillable` or `CompletePartialled` after 24 hours.

Step 3. Update the order fulfillment action to ship

Call the `updateFulfillmentOrder` operation to update the order with `fulfillmentAction` equal to `Ship` to move the order from `Hold` to `Ship`.

Request example

JSON

```
PUT "https://sellingpartnerapi-na.amazon.com/fba/outbound/2020-07-01/fulfillmentOrders/CONSUMER-2022921-145045"
{
  "fulfillmentAction": "Ship"
}
```

Step 4. Get the fulfillment order to validate the changes

On the successful update of the order, call the `getFulfillmentOrder` operation to validate that `fulfillmentAction` is updated to `Ship`. After the order moves to the `Ship` action, the next fulfillment steps start running on the order.
