FBA Inventory API

Learn how to programmatically retrieve information about inventory in Amazon's fulfillment network.

You use the [Fulfillment by Amazon \(FBA\) Inventory API](#) to retrieve information and track the real-time availability of your inventory in Amazon's fulfillment network at the marketplace level. You can get details such as listing condition and inventory quantities such as:

- **Fulfillable:** Inventory that can be picked, packed, and shipped.
- **Inbound:** Inventory that is on its way to Amazon's fulfillment network.
- **Reserved:** Inventory in Amazon's fulfillment network that is being picked, packed, and shipped; or is sidelined for measurement, sampling, or other internal processes.
- **Unfulfillable:** Inventory that cannot be sold.
- **Researching:** Inventory that is misplaced or warehouse damaged units that are actively being confirmed at an Amazon fulfillment center.

This API is available in all marketplaces.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Dynamic
