Feeds API FAQ

Frequently asked questions about the Feeds API.

▼ What type of feeds are available within the Feeds API?

The API provides feeds for a variety of use cases, including listing management, invoicing, and order management. For more details about Feeds API operations, associated data types, and schemas, refer to the [Feeds API Reference](#).

For details about available feed types, refer to [Feed Type Values](#).

▼ What format do I use when I submit

feeds?

You can submit feed documents in XML format or as flat files. The feed type name indicates the format. If the feed type contains `FLAT_FILE`, the document uses a flat file. Otherwise, the document uses XML for feed submission. Some reports, such as [UPLOAD_VAT_INV_OICE](#), neither use XML nor a flat file.

▼ Where can I find the schema for a feed?

The documentation for each specific feed type includes a link to its schema. The schemas are available only for XML feeds, not for flat files. For flat files, refer to the list of attributes that the documentation provides for each feed type.

▼ Where can I find the meaning of each XSD element for the XML feed?

You can find a detailed description for each element in the [XML element dictionary](#) on Seller Central.

▼ [Can I reduce feed processing time?](#)

Feed processing cannot be prioritized. Feeds are queued in the backend and processed sequentially based on their order in the queue.

However, you can optimize feed performance and processing by following [Feeds API Best Practices](#).

▼ [Why does feed processing sometimes take longer than one hour?](#)

Feed processing times depend on several factors and can take up to eight hours. To optimize feed processing, follow the [Feeds API Best Practices](#).

GET STARTED

[Welcome to SP-API Documentation](#)[What is the Selling Partner API?](#)[Selling Partner API Onboarding Overview](#)

▼ [Where can I find the definition of an error code in a Feeds API response?](#)

You can find a detailed explanation for an error code on [Seller Central](#).

▼ [How can I use the Feeds API to manually upload invoices?](#)

For details about how to manually upload invoices using the Feeds API, refer to [Manually Upload Invoices](#) or Seller Central.

▼ [Should I use the Listings API or the Listings Feed to manage listings?](#)

You can use the same data when you submit the feeds individually to the [Listings API](#) or in bulk with the [JSON LISTINGS FEED](#). Generally, it is recommended to use the feed for operations that involve more than 1,500 items (up to 25,000 per feed). Due to rate limits

DIRECTORIES

[SP-API Models](#)[SP-API Seller Use Cases](#)[SP-API Vendor Use Cases](#)[Seller Central URLs](#)[Vendor Central URLs](#)**REGISTRATION**[SP-API Registration Overview](#) >[Developer Registration Request Status](#)[Third-Party Provider Registration](#) >[Service Provider Registration and Role Approval Process Overview](#)[Website Guidelines for Public Developers and Service Providers](#)[User Permissions for Service Providers](#)[Register your Application](#)[Update your Application Information](#)[Rotate your Application's LWA Credentials](#) >[View your Application Information and Credentials](#)[Learn How Sellers Authorize Service Providers](#)[Selling Partner API Roles](#) >[Policies and Agreements](#)[About Facial Data](#)**AUTHORIZATION**[Authorize Applications](#) >

on the Listings API, feed processing is faster in such cases. For more information, refer to the [Listings management workflows guide](#).

▼ [Why doesn't Seller Central reflect my updates after I receive a FEED_PROCESSING_FINISHED notification for a JSON_LISTINGS_FEED ?](#)

You get the [FEED_PROCESSING_FINISHED](#) notification for [JSON_LISTINGS_FEED](#) when the items in the feed complete processing. However, error can occur during processing. If you specify the [includedData](#) in the feed header, you can retrieve details (for example, processing issues) about the listings items.

▼ [Why do I get an error when I try to submit a feed as a vendor?](#)

[Renew Authorizations](#)[Revoke Authorizations](#)[Authorization Limits](#)[Special Authorization Types](#) >**INTEGRATION**[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#) >

Currently, vendors can only use [JSON LISTINGS FEED](#) . All other feeds are for sellers only. You can check the availability of each feed in the table on [Feed Type Values](#).

▼ [What does Access to the resource is forbidden mean?](#)
Feeds require specific roles, depending on their content. You get this error when you do not have the appropriate roles to submit a feed. You can find the necessary roles for each report in the documentation. You can find further information on roles in the SP-API at [Roles in the Selling Partner API](#).

[Delete an Application From Your Developer Account](#)**CALLING THE SP-API**[Configuration Details](#) >[Call Structure](#) >

▼ [Why do I get a "403 Unauthorized" error when I create a new Feeds type?](#)
When you receive a "403 Unauthorized" error, your role

does not have the required permissions. To successfully use the Feed type, verify that your role includes the necessary endpoints in the [role mappings](#). If you have the right role assigned, refer to the other scenarios for [unauthorized errors](#).

▼ What does `feed messages list` beyond allowed size mean?

The allowed size for a single feed document is currently 10 MB. If your file exceeds this size, divide it into smaller submissions. For more information, refer to [Feeds API Best Practices](#).

`JSON_LISTINGS_FEED` has a limit of 25,000 items.

▼ How can a seller submit feeds through the API?

Sellers can submit feeds through the SP-API after they [register as a developer](#) to build
