What is the Selling Partner API?

Selling Partner API Onboarding Overview >

Get authorization to access PII for bulk orders

Learn how to use the Tokens API to access PII for bulk orders.

Learn how to use the Tokens API to access PII for bulk orders. The `dataElements` values that you specify (using the [restrictedResource](#) parameter of the `createRestrictedDataToken` operation) determine the type of restricted data that the RDT authorizes your application to access. In this tutorial we request an RDT that authorizes access to both buyer information and shipping address information.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner

Selling Partner API Roles >

for whom you are making calls. Refer to [Authorizing Selling Partner API applications](#) for more information.

- Approval for the following roles:
 - **Direct-to-consumer shipping.** Required to access shipping address information.
 - **Tax remittance.** Required to access buyer information.
 - **Tax invoicing.** Required to access buyer information.

To request access to these roles, refer to [Registering as a developer](#) and update your developer profile.

Step 1. Get an RDT

1. Call the `createRestrictedDataToken` operation.
2. Save the `restrictedDataToken` value (the RDT) to use in [Step](#)

[Policies and Agreements](#)[About Facial Data](#)**AUTHORIZATION**[Authorize Applications](#)[Renew Authorizations](#)[Revoke Authorizations](#)[Authorization Limits](#)[Special Authorization Types](#)**INTEGRATION**[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#)

[2. Include the RDT
with a call to the
getOrders
operation](#)

>

Step 2. Include the RDT with a call to the getOrders operation

**Note**

This is a restricted operation and requires a Restricted Data Token (RDT) for authorization. Some operations require restrictions because they contain customer PII data. These operations require passing an additional security review. For more information on RDT, refer to the [Tokens API](#) guide.

appropriate parameters to filter for the orders that you want. Be sure to include the RDT from [Step 1. Get an RDT](#) in the `x-amz-access-token` header of your call to `getOrders`. Because you specified both `buyerInfo` and `shippingAddress` in [Step 1. Get an RDT](#), your call to `getOrders` is authorized to return both buyer information and shipping address information for each order. Had you specified only `buyerInfo` in Step 1, `getOrders` would be authorized to return only buyer information for each order. Had you specified only `shippingAddress` in Step 1, `getOrders` would be authorized to return only shipping address information for each order.
