# Get orders with filtering criteria

Learn how to use the Orders API to get orders with filtering criteria.

Learn how to use the [Orders API](#) to retrieve a list of orders that match the criteria you specify.

## Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- At least one of the following roles assigned to your developer profile and selected in the app registration page:
  - The [Amazon Fulfillment](#) role.
  - The [Buyer Communication](#) role.
  - The [Buyer Solicitation](#) role.
  - The [Finance and Accounting](#) role.
  - The [Inventory and Order Tracking](#) role.
  - The [Pricing](#) role.
  - The [Product Listing](#) role.
  - The [Professional Services \(Restricted\)](#) role.
  - The [Selling Partner Insights](#) role.
  - The [Direct to Consumer Shipping \(Restricted\)](#) role.
  - The [Tax Invoicing \(Restricted\)](#) role.
  - The [Tax Remittance \(Restricted\)](#) role.

To access Personally Identifiable Information (PII), you must have approval for the following roles:

- [Direct-to-Consumer Delivery \(Restricted\)](#) role is required to access shipping address

- information.
- The [Tax Remittance \(Restricted\)](#) role is required to access buyer information.
  - The [Tax Invoicing \(Restricted\)](#) role is required to access buyer information.

You do not need a Restricted Data Token to access PII with the Orders API v2026-01-01.

Search for orders with basic information

Call the `searchOrders` operation. If you do not include `includedData` , the response will include only basic information about the orders, such as `orderId` , `createdTime` , `salesChannel` , `programs` , `orderItemId` , `product` , and other relevant details.

Search for orders with custom data sets

Call the `searchOrders` operation and include the `includedData` parameter with the information you want the response to include.

| Supported values | Description                                                                              | Corresponding attribute in the Order Schema       |
|------------------|------------------------------------------------------------------------------------------|---------------------------------------------------|
| BUYER            | The information of the buyer who purchased the order.                                    | Order.buyer                                       |
| RECIPIENT        | The information of the recipient to whom the order is delivered.                         | Order.recipient                                   |
| FULFILLMENT      | The information about how this order is being processed and shipped applied to the order | Order.fulfillment<br>Order.orderItems.fulfillment |

SELLING PARTNER APPSTORE

- What is the Selling Partner Appstore?
- List Your App on the Selling Partner Appstore

| Supported values | Description         | Corresponding attribute in the Order Schema |
|------------------|---------------------|---------------------------------------------|
| TAX              | Tax information     | Order.tax<br>Order.orderItems.tax           |
| PAYMENT          | Payment information | Order.payment                               |

Note

The `searchOrders` operation uses pagination when there are too many results to include in a single response. When this happens, the response includes a `pagination` object, which includes a `nextToken` value. To get the next page of results, make the same API call and use the `nextToken` value as the value for the `paginationToken` query parameter. All values in the subsequent request must remain the same as in the first request, with the exception of `maxResultsPerPage` and `includedData`, which may be modified between requests.

The `nextToken` returned by `searchOrders` expires after 24 hours.
