What is the Selling Partner API?

Selling Partner API Onboarding Overview

Terminology

Frequently Asked Questions

Get tax information

Learn how to use the Orders API to get tax information.

Learn how to use the [Orders API](#) to get tax-related information for orders.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- At least one of the following roles assigned to your developer profile and selected in the app registration page:
 - The [Amazon Fulfillment](#) role.

Selling Partner API Roles >

Get tax information

- The [Buyer Communication](#) role.
- The [Buyer Solicitation](#) role.
- The [Finance and Accounting](#) role.
- The [Inventory and Order Tracking](#) role.
- The [Pricing](#) role.
- The [Product Listing](#) role.
- The [Professional Services \(Restricted\)](#) role.
- The [Selling Partner Insights](#) role.
- The [Direct to Consumer Shipping \(Restricted\)](#) role.
- The [Tax Invoicing \(Restricted\)](#) role.
- The [Tax Remittance \(Restricted\)](#) role.

Step 1. Get the tax information

[Policies and Agreements](#)[About Facial Data](#)**AUTHORIZATION**[Authorize Applications](#)

INTEGRATION[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#)

>

To get the

`Order.tax.taxRegistrations[]`

information, you must have approval for at least one of the following roles:

- Tax Remittance (Restricted)
- Tax Invoicing (Restricted)

Call the [getOrder](#) or [searchOrders](#)

operation and include `TAX` in the `includedData`

parameter to get the following tax-related information:

- `Order.tax.taxRegistrations[]` — buyer, merchant, and marketplace tax registrations
- `Order.tax.taxInvoicing` — electronic invoice status and buyer invoice preference
- `Order.orderItems[].tax.taxCollections[]` — marketplace facilitator status per item
- `Order.orderItems[].tax.taxCalculationBreakdowns[]` — deemed reseller reporting scheme

TUTORIALS

Tutorial: Subscribe to the ORDER_CHANGE Notification

Tutorial: Test Selling Partner API Endpoints

Tutorial: Automate your SP-API Calls Using a C# SDK

Tutorial: Automate your SP-API Calls Using a Java SDK

Tutorial: Automate your SP-API Calls Using a JavaScript SDK for Node.js

Tutorial: Automate your SP-API Calls Using a Python SDK

Step 2. Get buyer tax registrations

To get the buyer tax registration information, you must have approval for at least one of the following roles:

- Tax Remittance (Restricted)
- Tax Invoicing (Restricted)

Extract tax registrations information from Step 1 response using the `Order.tax.taxRegistrations[]`. Then, filter by `Order.tax.taxRegistrations[].entityType == "BUYER"` to get the buyer's tax registrations.

Each buyer registration can return the following fields:

- `legalName` — buyer's legal company name
- `taxRegistrationType` — registration type (such as VAT, CST, or CPF)
- `taxRegistrationNumber` — the registration number
- `taxRegistrationAddress` —

SECURITY AND COMPLIANCE

SP-API Security and Compliance Overview

Amazon Selling Partner API Guard Implementation Guide 

Get tax information

buyer's business address (Türkiye only)

- `taxRegistration`
`Attributes[]` — additional attributes such as `TAX_OFFICE` (Türkiye only)

Note

You can get buyer tax registration information for orders in the United Kingdom, France, Germany, Spain, Italy, and the United Arab Emirates.

You can get buyer tax registration information for Türkiye orders where the buyer's invoice preference is `BUSINESS`.

You can get the VAT and CST buyer tax registration numbers for Amazon Business FBM orders.

You can also get the buyer CPF tax registration number for Brazil orders.

Step 3. Get merchant tax registrations

To get the merchant tax registration information, you must have approval for at least one of the following roles:

- Tax Remittance (Restricted)
- Tax Invoicing (Restricted)

Extract the tax registrations information from Step 1 response using the `Order.tax.taxRegistrations[]`. Then, filter by `Order.tax.taxRegistrations[].entityType == "MERCHANT"` to get the merchant's tax registrations.

Currently, only `Order.tax.taxRegistrations[].legalName` is returned for merchant tax registrations. You can get merchant tax registration information only for Brazil orders that are

either pending or unshipped.

Step 4. Get marketplace tax registrations

To get the marketplace tax registration information, you must have approval for at least one of the following roles:

- Tax Remittance (Restricted)
- Tax Invoicing (Restricted)

Extract the tax registrations information from Step 1 response using the `Order.tax.taxRegistrations[]`. Then, filter by `Order.tax.taxRegistrations[].entityType == "MARKETPLACE"` to get the marketplace's tax registrations.

Currently, only `Order.tax.taxRegistrations[].taxRegistrationType` and `Order.tax.taxRegistrations[].taxRegistrationNumber` are returned for marketplace tax registrations. You can get marketplace tax registration information only for

Brazil orders that are either pending or unshipped.

Step 5. Get the electronic invoice status

Extract the tax invoicing information from Step 1 response using the

```
Order.tax.taxInvoicing . The
```

```
Order.tax.taxInvoicing.invoiceStatus
```

field indicates the electronic invoice lifecycle state.

Use `invoiceStatus`

to control Brazil

EasyShip pickup

scheduling. Only

schedule pickup when

the status is

```
ACCEPTED .
```

Note

This attribute applies only to Brazil EasyShip orders.

Step 6. Get the buyer invoice preference

Extract the tax invoicing information from Step 1 response using the

```
Order.tax.taxInvoicing
```

ing . The

`Order.tax.taxInvoice`
`ing.buyerInvoicePre`
`ference` field indicates
 whether to issue an
 individual or business
 invoice.

Use

`buyerInvoicePrefere`
`nce` in Türkiye to route
 between e-Fatura
 (`BUSINESS`) and e-
 Arsiv (`INDIVIDUAL`)
 invoice generation.

When

`Order.tax.taxInvoic`
`ing.buyerInvoicePre`
`ference` is set to
`BUSINESS` , the seller
 must issue a business
 invoice to the buyer. To
 get the buyer's tax
 registration numbers
 (`Order.tax.taxRegis`
`trations[].taxRegis`
`trationNumber`), filter
`Order.tax.taxRegist`
`rations[].taxRegist`
`rationType` for either
`BUSINESS` or `VAT` .

**Note**

This attribute
 applies only
 to Türkiye
 orders.

Step 7. Get tax collection information

Extract the tax
 collection information

`Order.orderItems[]` .

Fulfillment Inbound API Rate Limits

FULFILLMENT OUTBOUND API

Fulfillment Outbound Dynamic Sandbox Guide

Fulfillment Outbound API

>

`tax.taxCollections[ ]` from Step 1 response. This array returns who is responsible for collecting tax on each item.

Each entry includes:

- `model` — the tax collection model (such as `MARKETPLACE_FACILITATOR`)
- `responsibleParty` — the legal entity collecting tax (such as Amazon Services, Inc.)

Use this to determine whether Amazon remitted the tax on your behalf under a marketplace facilitator law, or whether you as the seller remain responsible for remittance.

Step 8. Get deemed reseller reporting information

Extract the tax collection information `Order.orderItems[ ].tax.taxCalculationBreakdowns[ ]` from Step 1 response. The `Order.orderItems[ ].tax.taxCalculationBreakdowns[ ].reporti`

ngScheme field returns the reporting scheme applied when Amazon acts as the deemed reseller, with values including IOSS and UOSS .

Use this for EU VAT compliance reporting, particularly for orders where Amazon collected import VAT at checkout.
