Get the transaction status

Learn how to use the Vendor Direct Fulfillment Transaction Status API to get the transaction status.

Vendors can use the `getTransactionStatus` operation to check the status of a POST transaction. When a request is posted to Amazon using certain POST operations in the vendor APIs, such as `submitAcknowledgement` or `submitShipmentConfirmations` or `submitShipmentConfirmations` , for example, a successful response contains a transaction ID that uniquely identifies the transaction. Amazon will process the transaction asynchronously, and the final response will be available via the `getTransactionStatus` operation.

Amazon offers the final processed status for POST transactions such as `submitAcknowledgement` and `submitShipmentConfirmations` via this API. We highly recommend that vendors check the status using this API to ensure that transactions were processed successfully. If an error occurred you will receive the error details so you can correct the transaction and resubmit it.

Transaction status	Definition
Processing	The API transaction was received by Amazon is being processed. The processing is not completed yet. Check the SLA for each API operation for the expected time to complete processing.
Success	The API transaction was successfully processed by Amazon.
Failure	The API transaction failed during processing. The error details will be provided in the <code>getTransactionStatus</code> response body.

The transaction status is supported for the following Direct Fulfillment APIs:

Description	API section	Operation
Acknowledge Order	Direct Fulfillment Orders	<code>submitAcknowledgement</code>

About Facial Data

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

Description	API section	Operation
Submit Shipment Confirmations	Direct Fulfillment Shipping	submitShipmentConfirmations
Shipping Label Request	Direct Fulfillment Shipping	submitShippingLabelRequest
Shipping Status Updates	Direct Fulfillment Shipping	submitShipmentStatusUpdates
Inventory Update	Direct Fulfillment Inventory	submitInventoryUpdate
Invoice	Direct Fulfillment Payments	submitInvoice

If the transaction status is `Processing` and not updated to `Failure` or `Success` after 15 minutes, then the transaction has not successfully completed. The `Success` status will appear if the transaction is successful and an error code will be provided for `Failure`.

You cannot use this API for invoice messages as they are not supported and the status will be always be `Processing`. For any payment related queries, go to Vendor Central, select **Contact Us**, and select the relevant queue if the status is not updated in the vendor central portal within a day. Please ensure the data submitted is correctly formatted before opening the case.

For shipping label requests, if the transaction is failed with a terminal error reason code such as `Internal server error`, go to Vendor Central and select **Contact Us** to get the cause investigated. This generally happens due to operational constraints. For data related failures, you can correct the data and resubmit the payload to get the order fulfilled.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role assigned to your developer profile.
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role selected in the app registration page for your application.

Get the transaction status

To return the transaction status, call the `getTransactionStatus` operation.

List of errors

The following table contains a list of all possible error codes for each message type. You should configure these error codes in your system and design a failure handling mechanism. Each error code has a

Special Authorization Types

>

message that explains the error and details that suggest how to resolve the error before retrying the transaction.
