Frequently Asked Questions >

Get transaction status

Learn how to get the transaction status of an order

Amazon processes the transaction asynchronously and the final response is available using the `getTransaction` operation.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API Applications](#).
- The [Vendor Retail Procurement Orders role](#) assigned to your developer profile.

Get transaction status

Transaction status only supports the `Processing` and `Failure` status values. If transaction status is `Processing`, and not updated to `Failure` after 15 minutes, that indicates the transaction has successfully processed in our systems.

A transaction is considered successfully delivered on our end when the status is `Processing` . If for any reason, the [Vendor Central](#) status is not updated within 30 minutes of sending the message, open a support case using the [Vendor Central](#) by providing the `transactionID` returned in the POST call. Ensure data submitted is in the correct format before opening the case.

Transaction status	Definition
<code>Processing</code>	The API transaction was received by Amazon and is being processed. The processing has not completed yet. Check the SLA for each API operation for the expected time to complete processing.
<code>Success</code>	This status is supported only for Submit Shipment Confirmations and Submit Shipment in NA and EU only. Success is not supported for the submitAcknowledgement and submitInvoices operations.

AUTHORIZATION

Authorize Applications >

https://developer-docs.amazon/sp-api/docs/get-transaction-status

2/17

Transaction status	Definition
Failure	The API transaction failed during processing. The error details are provided in the transaction status response body.

- Renew Authorizations
- Revoke Authorizations
- Authorization Limits
- Special Authorization Types

>

INTEGRATION

- Building Robust Amazon SP-API Applications
- SP-API SDKs

>

Note

Transaction status is supported for the following API operations:

- submitAcknowledgement
- submitInvoices
- SubmitShipmentConfirmations
- SubmitShipments

Transaction is in processing state

JSON

```
{
  "payload": {
    "transactionStatus": {
      "transactionId":
        "20190905193800-
        0c6b76cb-9662-4f3a-be03-
        1686c1e21477",
      "status":
        "Processing"
    }
  }
}
```
