Guard and Security

Security considerations for Amazon Selling Partner API Guard

When you build systems on AWS infrastructure, security responsibilities are shared between you and AWS. This [shared model](#) reduces your operational burden because AWS operates, manages, and controls the components including the host operating system, the virtualization layer, and the physical security of the facilities in which the services operate. For more information about AWS security, visit [AWS Cloud Security](#).

Principle of least privilege

Selling Partner API Guard follows the principle of least privilege by only

CHANGELOG[SP-API Release Notes](#)[SP-API Deprecation Schedule](#)[SP-API Product Metadata Updates](#)**DIRECTORIES**[SP-API Models](#)[SP-API Seller Use Cases](#)[SP-API Vendor Use Cases](#)[Seller Central URLs](#)[Vendor Central URLs](#)**REGISTRATION**[SP-API Registration Overview](#) >[Developer Registration Request Status](#)[Third-Party Provider Registration](#) >[Service Provider Registration and Role Approval Process Overview](#)[Website Guidelines for Public Developers and Service Providers](#)[User Permissions for Service Providers](#)[Register your Application](#)[Update your Application Information](#)[Rotate your Application's LWA Credentials](#) >[View your Application Information and Credentials](#)[Learn How Sellers Authorize Service Providers](#)[Selling Partner API Roles](#) >

collecting data that is necessary to set up the tool, including account information and IAM roles to grant a trust relationship. Selling Partner API Guard findings reports contain information about type and severity of security risk, policy reference, and remediation recommendations. Selling Partner API Guard will also collect operational information necessary to improve its scan rules such as error rates. However, it does not collect data about the specific tools within your environment or proprietary information itself, nor does it share that information with Amazon.

AWS Identity and Access Management (IAM) roles

- AWS IAM roles allow customers to assign granular access policies and permissions to services and users on the AWS Cloud. Selling Partner API Guard creates IAM roles that grant AWS Lambda functions access to create Regional

resources. Selling Partner API Guard creates the following roles:

- **AWS Lambda Execution Role:** This role gives Lambda handlers permissions to perform the following operations:
 - Allow the support infrastructure to send email notifications
 - Add/modify/delete Amazon EventBridge subscriptions
 - Start/stop the security services scan
 - Create/terminate the Amazon EC2 instance process
- **Amazon EC2 instance role:** This role is created and attached to the EC2 instance to allow sufficient permissions to make API calls to respective AWS services. It has permissions to make the S3 calls to download the required artifacts

Delete an Application From Your Developer Account

for running CLI commands.

CALLING THE SP-API

Configuration Details >

- **Amazon S3 access policy:** This policy is restricted to the necessary IAM roles that limit artifact retrieval.

Call Structure >

Security groups

Development Tools >

Selling Partner API Guard's security groups are designed to control and isolate network traffic on your Amazon EC2 instances. We recommend that you review the security groups and further restrict access on a quarterly basis. As part of creation of Amazon EC2 instances, Selling Partner API Guard creates a new Security Group with the GuardCLI tag, which restricts the network access to two ip ranges for SSH protocol with following requirements.
