# Listings Items API Issues Troubleshooting

Context and troubleshooting for common issues during Listings Items integration.

The Listings Items API provides programmatic access to selling partner listings on Amazon. You can create, edit, delete, and retrieve details about Amazon listings (SKUs) for a selling partner. This includes product facts, such as item titles, and sales terms, such as price and inventory.

Listings data submitted to the Listings Items API abide by the [JSON Schema](#) format provided by the [Selling Partner API for Product Type Definitions](#).

The following troubleshooting tips help you resolve issues reported for a listing either on submission, during the process, or independent of the submission process.

## How are Listings Issues received?

### Synchronous vs Asynchronous

Within the listing experience, you can access issues during different parts of the process. You can receive issues synchronously when submitting to the Listings API that prevent acceptance and further processing of the submission. You can also receive asynchronous notifications for issues reported after making the submission. Issues can also be retrieved when reading listings data.

A **synchronous issue** occurs when the server rejects the request during the initial validation. This typically occurs due to incorrect attributes or mishandled parameters attached to the request.

An **asynchronous issue** occurs when a request passes the initial validation but returns an error after processing the data received. The issue returned is in the form of a message that can be used to resolve the problem.

### Post submission processing

Amazon performs multiple validations on submissions made by selling partners. Some of these validations return synchronously in response to the submissions. These cover data validations on the input itself, such as missing required attributes and invalid attributes.

If the submission passes the preceding synchronous validations, the submission is accepted and is sent downstream to create or update the SKU. There are multiple downstream processes that are then performed to successfully create an item in the Amazon catalog. Any of these downstream processes can generate issues that return asynchronously.

A client must handle issues reported both synchronously and asynchronously.

## Error code troubleshooting

| Issue Code | Listing Issues | Description |
|------------|----------------|-------------|
|------------|----------------|-------------|

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Use the Edit Item Costs feature in Vendor/Seller Central.                                                                                                                           | Cost increases are not allowed. Use the Edit Item Costs feature in Vendor/Seller Central. If necessary you can use the <code>Skip Cost Price</code> attribute to remove the requirement for providing a Cost Price using the API.                                                                                                                                                                                                                                                                                                                                         |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 90225   | Value for <code>attribute_name</code> is longer than the allowed maximum (limit unit).                                                                                                                                      | Some attributes have a maximum limit on the length of the value that can be submitted. Trim down the length of the attribute value and try submitting again.<br>Common attributes with the maximum number of characters permitted include: <ul style="list-style-type: none"> <li><code>item_name</code> : 200 characters</li> <li><code>generic_keyword</code> : 500 bytes</li> <li><code>included_components</code> : 80 characters</li> <li><code>externally_assigned_product_identifier</code> : 12 characters expected for UPC, 13 for EANs, 14 for GTINs</li> </ul> |  |

Items cannot be duplicated in your catalog.                                    | This issue is returned when an item is submitted and matches an existing ASIN that is already added to the account, or when a vendor wants to edit a SKU on an existing ASIN. A SKU is an un-editable attribute; after the item is created, it cannot be changed. The vendor needs to use the original SKU they used to create the item before editing any other attributes.                                                                                                                                                                                              |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 90180   | The value <code>Boolean   [false, true]</code> in the field value for the attribute <code>attribute_name</code> has the wrong type. The provided type is <code>STRING</code> while the expected type is <code>BOOL</code> . | A solution would be resubmitting with the expected type referenced in the issue message.<br><br>Example: The value <code>number</code> in the field <code>weight#1.value</code> for the attribute <code>battery</code> has the wrong type. The provided type is <code>STRING</code> while the expected type is <code>DECIMAL</code> .                                                                                                                                                                                                                                     |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 4005007 | A match for the value of <code>attribute_name</code>                                                                                                                                                                        | This issue is returned when the item submitted has an external ID that is not registered for use with the provided brand. | CUSTOMER FEEDBACK API                             |   | <b>99016</b> A maximum of max_count occurrence(s) is/are allowed for the attribute attribute_name but it currently occurs actual_count times.     | This occurs when there are too many entries for a certain attribute name. A solution would be to remove any additional entries and resubmit. If the issue persists, contact <a href="#">Developer Support</a> to request that they delete the duplicate attributes.<br><br>Example: A maximum of two occurrence are allowed for the attribute sport_type but it currently occurs four times. To fix this, the vendor should remove two of the entries: |

**4000003**

The Amazon Product Type specified is invalid or not supported.

The Amazon Product Type specified is invalid or not supported.

The Product Type Definitions [searchDefinitionsProductTypes](#) operation should be used to verify that the Product Type is valid.

**Note:** the Product Type Definitions [getDefinitionsProductType](#) operation "roll up" to parent product types and return a 200 response for unlaunched PTs. If this happens the Product Type Definitions Get API response has the `productType` attribute set to the parent PT, usually `PRODUCT`.

**4005035**

The provided vendor code is not eligible to sell this brand. Contact your vendor manager for approval.

The vendor's vendor code is not authorized to sell this brand. To solve this, contact your Amazon point of contact.

**4005012**

The provided value for `attribute_name` and vendor code are assigned to a different ASIN.

The SKU is already assigned to a different ASIN. A single vendor code + SKU can be assigned to only one ASIN. Raise a [Contact Us](#) case to Amazon to support with resolution.

Value of `attribute_name` does not contain a percentage (for example, Cotton instead of 100% Cotton).

This issue occurs when the selling partner has not provided a `fabric_type` in the expected format or when there is already a bad `fabric_type` value in the Contribution Catalog.

The value, that you entered for the attribute Product Category, is not one of the valid values. To fix this error, refer to the [Product Type Definitions API](#) for a list of valid values and ensure that they are reflected in your system to prevent failed submissions.

This issue occurs when the submitted value for the Product Category ( recommended\_browse\_nodes ) attribute is not a recognized or valid enumerated value. The value must match one of the accepted browse node IDs for the marketplace and product type.

**100980**

Your barcode is already associated with another product ASIN, which appears to be different from the product you are trying to list. If your barcode is correct, contact Amazon Vendor Central Support for assistance or delete this contribution and create a new contribution with correct barcode.

This issue occurs when the external product identifier (UPC/EAN/GTIN) submitted is already linked to a different ASIN in the Amazon catalog, and the product details do not match. This typically indicates a barcode conflict — either the barcode was reused, incorrectly assigned, or there is a catalog data discrepancy.

**101165**

Your item with SKU , external product ID, and ASIN

This issue occurs when the combination of SKU, external product identifier, and ASIN resolves to multiple products in the Amazon catalog. The identifiers are ambiguous and cannot be matched to a single catalog item. This is

Your cost was not updated to `{cost_value}` `{currency}` .

Go to Item > Edit Costs to update your product's cost.

If you are an Advantage vendor, payments are calculated based on the list price, not the cost.

This error returns when you submit an increased cost price through the Listings API. You cannot increase the cost price when you update a contribution. For Advantage vendors, the system calculates payment by applying the purchase discount to the list price, so cost updates don't apply.

Your `SKU` is associated with multiple External Product IDs, but each ASIN and each External ID requires its own unique SKU. Contact Amazon Vendor Central Support to update your catalog with unique SKUs for each external product ID.

This issue occurs when a single SKU is linked to more than one external product identifier (UPC/EAN/GTIN). Amazon requires a one-to-one mapping between SKUs and external product IDs. Each unique ASIN and external ID combination must have its own distinct SKU.
