Listings Items API Rate Limits

Learn the rate limits for the Listings Items API.

This document lists the throttle error messages and the default rate limits for the Selling Partner API for Listings Items (Listings Items API)

Rate limits depend on multiple factors. An individual operation can have multiple rate limits. For example, a rate limit might depend on the selling partner account and also on the application that calls the Selling Partner API on behalf of the selling partner account. Requests are rate-limited by whichever threshold you reach first.

Throttle error messages

Error code	Error message	Additional details and preventive actions
429	The frequency of requests was greater than what is allowed for the application.	Ensure the number of updates from the application does not exceed the rate limit per application.
429	The frequency of requests was greater than what is allowed for relationships.	Ensure updates containing relationship updating attributes (<code>child_parent_sku_relationship</code> , <code>package_contains_sku</code>) do not exceed the application's rate limit for relationship updates.
429	The frequency of requests was greater than what is allowed for product data.	Ensure updates containing product data attributes (for example, <code>item_name</code>) do not exceed the application's rate limit for product data updates .

The corresponding rate limit based on the operation used and the attributes contained in the updates can be found in the [rate limit table](#).

Note

The `x-amzn-RateLimit-Limit` response header, if available, specifies the operation's rate limits per account-application pair. The

https://developer-docs.amazon/sp-api/docs/listings-items-api-rate-limits

1/15

`x-amzn-RateLimit-Limit` doesn't include other usage plan rate limits. For details, refer to [How to find your usage plan](#).

For information about the rate-limiting algorithm, factors that determine rate limits, and how to find your rate limits, refer to [Usage Plans and Rate Limits](#). For information about how to optimize your application for rate limits, refer to [Optimize Rate Limits for Application Workloads](#).

 Product data attribute

Attributes that are not [inventory attributes](#), [pricing attributes](#) and relationship updating attributes categorize as product data attributes.

In the following tables, rates are in requests per second unless otherwise specified.

Listings Items API v2021-08-01

Operation	Rate limit per account-application pair	Rate limit per application	Burst (requests)	Additional details
deleteListingsItem	5	100	5	None
getListItems	5	100	5	None
patchListingsItem	5	500	5	Limits for specific cases: • Updates that contain relationship updating attributes (<code>child_parent_sku_relationship</code>, <code>package_contents_sku</code>): Limit of 100 requests per application per second. • Updates that
