CHANGELOG

Manage Amazon Haul, Advanced Multiple-Offer, and Multiple-Fulfillment Use Cases

Implement Amazon Haul, Multiple-Offer, and Multiple-Fulfillment listings workflows.

Listings on Amazon typically contain offer (pricing) details for:

- A single buyer segment (for example, Amazon.com buyers)
- Fulfillment configuration (inventory) for a single fulfillment channel, MFN or FBA
 - MFN: Merchant-fulfilled (DEFAULT)
 - FBA: Amazon-fulfilled (for example, AMAZON_NA)

However, there are advanced selling partner use cases that support Amazon Haul, multiple offers or multiple fulfillment channels for an individual listing. Follow the guidance in this document to support these use cases with:

- [Listings Items API](#)
- JSON_LISTINGS_FEED feed type with the [Feeds API](#)

 Note

While the [Listings Items API](#) and JSON_LISTINGS_FEED feed type (Feeds API) support multiple offers and multiple fulfillment records, not all Selling Partner tools support these features. These are advanced use cases primarily available through APIs with limited (or no) support on Seller Central or other listings tools.

The use cases in this guide are:

- [Amazon Haul](#)
- [Multiple offers with Amazon Business \(B2B\)](#)
- [Multiple Fulfillment Channels with Default MFN and FBA](#)
- [Multiple Fulfillment Channels with MFN Supply Sources](#)
- [Multiple offers with B2B Industry Vertical Pricing \(IVP\)](#)

Purchasable offer attributes and audiences

The relationship between a listing and the one-to-many offers on a listing are described by the `purchasable_offer` attribute for the listing. The `purchasable_offer` attribute is an array that accepts one or more distinct offers, each keyed by the `audience`, `currency`, and `marketplace_id` to which the offer is applicable.

Note

To granularly update or delete individual sub-attributes of `purchasable_offer` (such as prices, dates, and pricing plans) without recreating the entire offer, refer to [Manage purchasable offer](#).

The following example describes a standard Sell on Amazon offer with a regular price and a sale price in the US marketplace:

JSON

```
{
  "purchasable_offer": [
    {
      "audience": "ALL",
      "currency": "USD",
      "marketplace_id": "ATVPDKIKX0DER",
      "our_price": [
        {
          "schedule": [
            {
              "value_with_tax": 123.00
            }
          ]
        }
      ],
      "discounted_price": [
        {
          "schedule": [
            {
              "value_with_tax": 110.00,

SP-API SDKs

>

The available `audience` values differ by selling partner and marketplace, based on the programs that a selling partner is enrolled in. To retrieve the list of available values for a given selling partner, use the [Product Type Definitions API](#). Include the `sellerId` parameter to retrieve JSON schemas that contain the selling partner-specific `audience` values and the pricing information that is supported for each `audience` value. For example, `quantity_discount_plan` information is supported for Amazon Business offers, but is not supported for other offer types.

Common audience values

		Audience	Name	Description
		ALL	Sell on Amazon	Standard offers for buyers on Amazon websites.
		B2B	Amazon Business	Offers that target Amazon Business (B2B) buyers.
		BZR	Low-Cost Store	Offers that target Low-Cost Store buyers, such as Amazon Bazaar in India.
		B2B_EDUCATION	Amazon Business (B2B) Education	Offers that target Amazon Business Education buyers enrolled in the Industry Vertical Pricing (IVP) program.
		B2B_REAL_ESTATE	Amazon Business (B2B) Real Estate	Offers that target Amazon Business Real Estate buyers enrolled in the Industry Vertical Pricing (IVP) program.

Fulfillment availability attributes and fulfillment channel codes

The relationship between a listing and the one-to-many fulfillment channels on a listing are described by the `fulfillment_availability` attribute for the listing. The `fulfillment_availability` attribute is an array that accepts one or more distinct fulfillment records, each keyed by the `fulfillment_channel_code` to which the fulfillment record is applicable.

The following example describes a standard MFN fulfillment record with a `quantity`, `restock_date`, and `lead_time_to_ship_max_days`:

JSON

```
{
  "fulfillment_availability": [
    {
      "fulfillment_channel_code": "DEFAULT",
      "quantity": 10,
      "restock_date": "2025-01-01",
      "lead_time_to_ship_max_days": 5
    }
  ]
}
```

The available `fulfillment_channel_code` values differ by selling partner and marketplace, based on the programs that a selling partner is enrolled in. To retrieve the list of available values for a given selling partner, use the [Product Type Definitions API](#). Include the `sellerId` parameter to retrieve JSON schemas that contain the selling partner-specific `fulfillment_channel_code` values and the fulfillment information that is supported for each `fulfillment_channel_code` value. For example, `quantity` information is supported for MFN fulfillment, but not for Fulfillment by Amazon (FBA) fulfillment.

You can use the [Supply Sources API](#) to retrieve selling partner-specific `fulfillment_channel_codes` for location-specific inventory. For more information, refer to the [Multi-Location Inventory Integration Guide](#).

Common fulfillment channel code values

Fulfillment Channel Code	Name	Description
DEFAULT	MFN	Provide quantity for standard fulfillment by a selling partner.
AMAZON_NA	FBA (NA Region)	Enable FBA fulfillment in the NA region.

Fulfillment Channel Code	Name	Description
AMAZON_EU	FBA (EU Region)	Enable FBA fulfillment in the EU region.
AMAZON_JP	FBA (JP Region)	Enable FBA fulfillment in the JP region.

Amazon Haul

Amazon Haul is a dedicated shopping experience for the Amazon US marketplace that allows customers to shop low-priced, generic fashion, home, and lifestyle products. You can sell your low-priced selection in the product types listed in [selection allowed on the Amazon Haul](#).

To create an Amazon Haul listing, refer to [Listing Items on Amazon](#).

While creating Amazon Haul listings, call the `getDefinitionsProductType` operation to retrieve the JSON Schema describing the attributes and constraints for the product type. You must include the `sellerId` parameter to retrieve the JSON schema. The schema contains the selling partner-specific `is_value_stores_item` attribute and the Value Store (BZR) offer `audience` for the Haul-enabled stores. If you are creating listings for the first time, ensure that you set the attribute `is_value_store_item` to `true` and `audience` attribute to `BZR`. This ensures that the ASIN is created for the Haul program and offer details are handled correctly.

Note

The following parameters are not supported for Haul listings:

- `fulfillment_availability`
- `externally_assigned_product_identifier`
- `merchant_suggested_asin`

For an example, refer to the following sample code.

```
JSON
{
  "purchasable_offer": [
    {
      "audience": "BZR",
      "currency": "USD",
      "marketplace_id": "ATVPDKIKX0DER",
      "our_price": [
        {
```

Multiple offers with B2B

Selling partners enrolled in the Amazon Business (B2B) program can create multiple offers on a listing, which creates differential pricing between regular buyers on Amazon websites (such as Amazon.com) and business buyers on Amazon Business websites.

The following example describes a standard offer and a business offer with percent-based quantity discounts for the US marketplace:

},
],
"quantity_discount_plan": [
  {
    "schedule": [
      {
        "discount_type": "fixed",
        "levels": [
          {
            "lower_bound": 5,
            "value": 25.0
          },
          {
            "lower_bound": 10,
            "value": 20.0
          }
        ]
      }
    ]
  }
]
}
}
```

 Note

Using the `patchListingsItem` operation to update an Amazon Business (B2B) offer doesn't affect existing Sell on Amazon offers. When you `PATCH` a listing, only the offer record that matches the specified `audience`, `currency`, and `marketplace_id` is updated.

Multiple offers with B2B Industry Vertical Pricing (IVP)

Selling partners with Amazon Business (B2B) access can create offers that target specific B2B buyer segments, such as education institutions. IVP audience values are available to all sellers with the `SellingToBusinesses` subscription. Use the [Product Type Definitions API](#) with the `sellerId` parameter to check which IVP audiences are available for a given selling partner. IVP offers extend the existing B2B offer model by allowing sellers to set differentiated pricing for specific industry verticals.

 Important

If you have automated pricing rules configured for IVP in the Custom Pricing section of the Seller Central, those rules take priority over IVP offers submitted through the Listings API. To avoid pricing conflicts, delete any automated IVP

pricing rules from the Custom Pricing page before you submit IVP offers through the API.

 Note

IVP audiences are currently available in the US marketplace only.

IVP audience values

Audience	Name	Description
B2B_EDUCATION	Amazon Business (B2B) Education	Offers for Amazon Business Education buyers.
B2B_REAL_ESTATE	Amazon Business (B2B) Real Estate	Offers for Amazon Business Real Estate buyers.
B2B_INDUSTRIAL	Amazon Business (B2B) Industrial	Offers for Amazon Business Industrial buyers.
B2B_HEALTHCARE	Amazon Business (B2B) Healthcare	Offers for Amazon Business Healthcare buyers.
B2B_FOODSERVICE_HOSPITALITY	Amazon Business (B2B) Foodservice & Hospitality	Offers for Amazon Business Foodservice & Hospitality buyers.
B2B_AUTOMOTIVE	Amazon Business (B2B) Automotive	Offers for Amazon Business Automotive buyers.
B2B_GOVERNMENT	Amazon Business (B2B) Government	Offers for Amazon Business Government buyers.
B2B_STARTUP	Amazon Business (B2B) Startups	Offers for Amazon Business Startups buyers.
B2B_FEDERAL_GOVERNMENT	Amazon Business (B2B) Federal Government	Offers for Amazon Business Federal Government buyers.

Create an IVP offer using PATCH

Use the `patchListingsItem` operation to publish an IVP offer for an existing listing. PATCH is the recommended operation for publishing or updating IVP offer prices.

The following example creates offers for three audiences — standard (ALL), business (B2B) with quantity discounts, and education (B2B_EDUCATION) with quantity discounts in a single PATCH request:

JSON

```
{
  "productType": "PRODUCT",
  "patches": [
    {
      "op": "replace",
      "path":
"/attributes/purchasable_offer",
      "value": [
        {
          "currency": "USD",
          "audience": "ALL",
          "our_price": [
            {
              "schedule": [
                {
                  "value_with_tax":200.00
                }
              ]
            }
          ],
          "marketplace_id":
"ATVPDKIKX0DER"
        },
        {
          "currency": "USD",
          "audience": "B2B",
          "our_price": [
            {
              "schedule": [
                {
                  "value_with_tax":190.00
                }
              ]
            }
          ],
          "quantity_discount_plan": [
            {
              "schedule": [
                {
                  "discount_type": "percent",
                  "levels": [
                    {
                      "lower_bound": 4,
                      "value": 1.1
                    }
                  ]
                }
              ]
            }
          ]
        }
      ]
    }
  ]
}
```

Reports API FAQ

SALES API

Sales API

Multiple fulfillment channels with default MFN and FBA

Selling partners who are enrolled in FBA typically create listings that are MFN or FBA-enabled. Through the SP-API, you can configure both options on a listing. When FBA

SELLER WALLET API

Seller Wallet API

inventory is available, it is used first. MFN inventory is used after the FBA inventory is depleted.

! Important

When updating the inventory through the [Listings Items v2021-08-01 API](#) or `JSON_LISTING_FEED`, you no longer need to include the `lead_time_to_ship_max_days` value to maintain the handling time defined at the SKU-level. You can now use a JSON patch `merge` operation with the [Listings Items v2021-08-01 API](#) and `JSON_LISTING_FEED` to update the `quantity` field without specifying other optional fields such as `restock_date` and `lead_time_to_ship_max_days`. For more information, refer to the [announcement](#).

The following example describes fulfillment records that enable MFN and FBA on a listing:

JSON

```
{
  "fulfillment_availability": [
    {
      "fulfillment_channel_code": "DEFAULT",
      "quantity": 10,
      "restock_date": "2025-01-01",
      "lead_time_to_ship_max_days": 5
    },
    {
      "fulfillment_channel_code": "AMAZON_NA"
    }
  ]
}
```

Multiple fulfillment channels with MFN supply sources

Selling partners who are enrolled in multi-location inventory management with the [Supply Sources API](#) can submit location-specific inventory information using the Supply Source identifier as the `fulfillment_channel_code`.

The following example describes fulfillment records for two supply sources:

JSON

```
{
  "fulfillment_availability": [
    {
      "fulfillment_channel_code": "0cfcbed2-
```
