Manage automated pricing rules with SP-API

Learn how to manage automated pricing rules programmatically.

This tutorial explains how to manage the [Automate Pricing](#) tool using the [Product Type Definitions API](#) and the [Listings Items API](#). Selling partners can use automated pricing rules to dynamically adjust the product prices based on various market conditions and strategies. This workflow helps you implement automated pricing capabilities for your selling partners.

By using the API to manage automated pricing, you eliminate the need for manual SKU-to-rule association in Seller Central. After you associate the SKU to a rule by using the Listings API, Amazon executes the selected pricing strategy 24 hours a day (featured offers, lowest prices, external prices, sales-based rules, or custom rules).

 **Note**

The Amazon automate pricing feature available through SP-API does not support B2B rules.

Prerequisites

To complete this tutorial, you must have:

- Access to the [Product Listing role](#)

Workflow

The following diagram provides an overview of the pricing rules workflow steps.

SP-API SDKs

Step 1. Retrieve available pricing rules

Note

To create custom pricing rules in Seller Central, refer to [Create a Pricing Rule](#).

To retrieve the available pricing rules for the seller, call the `getDefinitionsProductType` operation from the [Product Type Definitions API](#).

HTTP

```
GET https://sellingpartnerapi-na.amazon.com/definitions/2020-09-01/productTypes/:productType?sellerId={{SellerID}}&productTypeVersion=LATEST&requirements=LISTING&requirementsEnforce={{marketplaceId}}
```

The response includes the `schema` parameter, which contains a link to the JSON schema for the product type definition where the `automated_pricing_merchandising_rule_plan` attribute displays the available pricing rules.

JSON

```
{
  "metaSchema": {
    "link": {
      "resource": "https://selling-partner-definitions-prod-iad.s3.amazonaws.com/schema/amazon-product-type-definition-meta-schema-v1.json/.....",
      "verb": "GET"
    },
    "checksum": "rZ/2Yep0np022S38ZdEiNQ=="
  },
  "schema": {
    "link": {
      "resource": "https://selling-partner-definitions-prod-iad.s3.amazonaws.com/schema/amazon-product-type-definition-meta-schema-v1.json/....."
    }
  }
}
```

```
iad.s3.amazonaws.com/schema/PRODUCT.json/.....",
  "verb": "GET"
},
"checksum": "Hi42HJF0EDK0SFY09SSje+Ibq5Xg=="
}
}
```

You can retrieve the full schema containing attributes for the requested product type from the schema resource URL. Review the `automated_pricing_merchandising_rule_plan` array properties to fetch the `enum` and `enumNames` values available in the Seller Central dashboard.

The `automated_pricing_merchandising_rule_plan` attribute contains the following values:

- `enum` : The pricing rule keys.
- `enumNames` : The Seller Central pricing rule values.

Index	enum	enumNames
0	328182282407-COMPETITIVE_BUYBOX	Competitive price rule by Amazon
1	328230445807-CROSSBORDER_PRICING	Global selling price rule by Amazon
2	7287d6de-4230-4106-bfd4-fe315b2af89a	Custom test rule

```
JSON
{
  "automated_pricing_merchandising_rule_plan": {
    "type": "array",
    "minItems": 1,
    "items": {
      "type": "object",
      "required": [],
      "properties": {
        "merchandising_rule": {
          "type": "object",
          "required": [
            "rule_id"
          ],
          "properties": {
            "rule_id": {
              "title": "Pricing Rule",
              "description": "The pricing rule that will automate price on this offer",

Amazon Selling Partner API Guard Implementation Guide [>](#)

Manage automated pricing rules with SP-API

```
},
"additionalProperties": false
}
}.....
```

Step 2. Assign pricing rule and set minimum/maximum price guardrails

To safely associate a SKU with a pricing rule, you must set price guardrails by using the [PATCH operation](#). You can set thresholds for the pricing rule on that SKU with the `minimum_seller_allowed_price` and `maximum_seller_allowed_price` attributes. You can only associate each SKU with one pricing rule at a time. You can assign the rules retrieved from previous step using the `automated_pricing_merchandising_rule_plan`. You can enroll SKU into rules and set maximum and minimum prices using the same `PATCH` operation.

HTTP

PATCH <https://sellingpartnerapi-na.amazon.com/listings/2021-08-01/items/:sellerId/:sku?marketplaceIds={{marketplace}}>

JSON

```
{
  "productType": "PRODUCT",
  "patches": [
    {
      "op": "replace",
      "path": "/attributes/purchasable_offer",
      "value": [
        {
          "currency": "USD",
          "audience": "ALL",
          "marketplace_id": "ATVPDKIKX0DER",
          "minimum_seller_allowed_price": [
            {
              "schedule": [
                {
                  "value_with_tax": 70
                }
              ]
            },
            {
              "schedule": [
                {
                  "value_with_tax": 130
                }
              ]
            }
          ],
          "automated_pricing_merchandising_rule_plan": [
            {
              "merchandising_rule": {
                "rule_id": "328182282407-
COMPETITIVE_BUYBOX"
              }
            }
          ]
        }
      ]
    }
  ]
}
```

A successful response looks like:

APP INTEGRATIONS API

App Integrations API

JSON

```
{
  "sku": "{sku}",
  "status": "ACCEPTED",
  "submissionId": "{submissionId}",
  "issues": []
}
```

Step 3. Verify rule changes

After any rule changes (enrollment, removal, or switching), verify the current state using the `getListingsItem` operation. Rule changes are asynchronous after a successful API response.

HTTP

GET <https://sellingpartnerapi-na.amazon.com/listings/2021-08-01/items/:sellerId/:sku?marketplaceIds={{marketplace}}&includedData=attributes,offers>

The following example response shows active rule association:

JSON

```
{
  "sku": "{sku}",
  "attributes": {
    "purchasable_offer": [
      {
        "currency": "USD",
        "audience": "ALL",
        "our_price": [
          {
            "schedule": [
              {
                "value_with_tax": 100
              }
            ]
          }
        ]
      }
    ],
    "maximum_seller_allowed_price": [
      {
        "schedule": [
          {
            "value_with_tax": 80
          }
        ]
      }
    ],
    "automated_pricing_merchandising_rule_plan": [
      {
        "merchandising_rule": {
          "rule_id": "328182282407-COMPETITIVE_BUYBOX"
        }
      }
    ],
    "marketplace_id": "ATVPDKIKX0DER"
  }
}
```

Step 4. Switch between pricing rules

Note

When switching rules, there is no need to remove the previous rule first.

 Note

You cannot verify the SKU enrollments when you use the `getListingsItem` operation in Seller Central.

Step 5. Disassociate a pricing rule

>

Use the patch [merge](#) operation to disassociate a SKU from an automated pricing rule by setting explicit `null` values for the `automated_pricing_merchandising_rule_plan` within the `purchasable_offer` :

HTTP

PATCH <https://sellingpartnerapi-na.amazon.com/listings/2021-08-01/items/:sellerId/:sku?marketplaceIds={{marketplace}}>

JSON

```
{
  "productType": "PRODUCT",
  "patches": [
    {
      "op": "merge",
      "path": "/attributes/purchasable_offer",
      "value": [
        {
          // Merge operation must provide non empty values for selector
          "audience": "ALL",
          // The user wants to disassociate SKU from automated pricing
        }
      ]
    }
  ]
}
```
