Mapping product attributes to the Listings Items API and JSON-based feeds

Map product attributes from category XSDs and flat file feed types to the Listings Items API and JSON-based feeds.

! Important

Starting **July 31, 2025**, the Feeds API no longer supports legacy XML and flat file listing feeds, including pricing, inventory, relationships, and images. Developers will receive fatal `processingStatus` in the `getFeed` API response for these feeds. For more information, refer to the [deprecation announcement](#).

Product attributes mappings from category XSDs (XML) and flat file feed types

Data elements in the `Listings Items API` and `JSON_LISTINGS_FEED` are structured and, in some cases, named differently from how those data elements are structured and named in XML and flat file feed types. The updated data elements are a more direct representation of the data modeling of Amazon’s catalog, expanding support for features not previously available with legacy feed types and enabling consistency with the latest requirements of the Amazon catalog.

The mapping of data elements for inventory, pricing, images, shipping, and variation relationships are outlined in this guide in the

following sections. However, for product data (for example: item names, bullet points, and other relevant attributes), there are thousands of mappings from legacy XML and flat file feed types. To aid in migration of product attributes, the following files provide mappings from the product data elements from legacy XML and flat file feed types to the corresponding data elements in the Listings Items API and `JSON_LISTINGS_FEED`.

- [Product XML \(Category XSD\) Mappings](#)
- [Product Flat File Mappings](#)

Updates for Legacy Flat Feed Users

The following changes apply to legacy flat feed users:

- `merchant_shipping_group_name` (`merchant_shipping_group`) attribute requires the enumeration key instead of name in the `JSON` path/attributes/merchant_shipping_group/0/value - **also applies to legacy XML feed users.**
- Unit of measure requires full names instead of abbreviations (use "pounds" instead of "lb" for weight).
- Variation theme format changes from **CamelCase** in flat files (`SizeName`) to **Underscore** format in the JSON schema (`Size_Name`).

These format and naming changes can cause enum values and attribute names to differ between flat file and `JSON_LISTINGS_FEED`, requiring updates to your data mappings during migration.

The mappings in these files are limited to product-related attributes (that is, they do not include inventory or pricing) and do not include the product type or marketplace-specific relevancy of each. The [Product Type Definitions API](#) provides JSON Schemas that represent the applicable attributes and constraints per product type and marketplace. Using the

> mapping files in conjunction with the JSON Schemas lets you update your data mappings, identify which mappings are relevant for each product type and marketplace, identify data elements no longer relevant, and identify new relevant data elements.

Inventory Feed mappings

The following table provides a mapping of XML element by XPath to JSON element by JSON Pointer for inventory data.

>

XML Element	JSON Element	Description
/AmazonEnvelope/Message/Inventory/FulfillmentCenterID	/attributes/fulfillment_availability/0/fulfillment_channel_code	Represents the name of the fulfillment channel. Examples: DEFAULT (MFN), AMAZON_NA (FBA), AMAZON_EU (FBA), and AMAZON_JP (FBA).
/AmazonEnvelope/Message/Inventory/Available	/attributes/fulfillment_availability/0/is_inventory_available	Indicates MFN inventory is always available instead of providing a quantity value.
/AmazonEnvelope/Message/Inventory/Quantity	/attributes/fulfillment_availability/0/quantity	Indicates MFN quantity available for fulfillment.
/AmazonEnvelope/Message/Inventory/RestockDate	/attributes/fulfillment_availability/0/restock_date	Indicates the date MFN quantity is available for fulfillment.

SELLING PARTNER APPSTORE

- What is the Selling Partner Appstore?
- List Your App on the Selling Partner Appstore

XML Element	JSON Element	Description
/AmazonEnvelope/Message/Inventory/FulfillmentLatency	/attributes/fulfillment_availability/lead_time_to_shipping_max_days	Indicates the handling time for MFN fulfillment.
/AmazonEnvelope/Message/Inventory/SwitchFulfillmentTo	-	Indicates the provided fulfillment type (MFN or AFN) should replace the existing fulfillment type. This feature is replaced by explicitly adding and deleting fulfillment channels. More details outlined in the SwitchFulfillmentTo section.

Pricing Feed mappings

The following table provides a mapping of XML element by XPath to JSON element by JSON Pointer for pricing data. Data elements no longer relevant have been excluded.

 **Note**

For more details on how to granularly update and delete individual `purchasable_offer` sub-attributes using the Listings Items API, refer to [Manage purchasable offer](#).

XML Element	JSON Element	Description
/AmazonEnvelope/Message/StandardPrice	/attributes/purchasable_offer/our_price/schedule/value	Standard price, when no discounted price scheduled
