Merge a listing

Learn how to merge an Amazon listing for a given selling partner and Amazon marketplace using the Listings Items API.

Learn how to merge an Amazon listing for a given selling partner and Amazon marketplace using the Listings Items API.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. Refer to [Authorizing Selling Partner API Applications](#) for more information.
- Approval for the Product Listing role in your developer profile.
- The Product Listing role selected in the App registration page for your application.

Patch Merge operation

You can use the Patch `merge` operation to update the `quantity` field within the `fulfillment_availability` without specifying other optional fields such as `restock_date` and `lead_time_to_ship_max_days`. You must provide non-empty values for the selector field such as `fulfillment_channel_code`. There are no changes to other optional fields if not included, such as, `restock_date`, `lead_time_to_ship_max_days`.

Python

```
{
  "patches": [
    {
      # The new merge operation
      introduced into the Patch API.
      "op": "merge",
```

Merge a listing

```

# The merge operation
operates on fulfillment_availability
target property.
    "path":
"/attributes/fulfillment_availability",

    "value": [
        {
            # Merge operation
            must provide non empty values for
            selector fields.

            "fulfillment_channel_code": "DEFAULT",

            # Updates the
            current value of the optional quantity
            field with the new value.
            "quantity": 20,

            # no change to
            other optional fields such as
            restock_date,
            lead_time_to_ship_max_days if not
            included
        }
    ]
}

```

You can use the PATCH `merge` operation to delete previously set values for `quantity_discount_plan` within the `purchasable_offer` by setting explicit `null` values . You must provide non-empty values for the selector field such as `audience` . For more details on how to granularly update and delete all sub-attributes of `purchasable_offer` , refer to the [Manage purchasable offer](#).

Python

```

{
    "patches": [
        {
            # The new merge operation
            introduced into the Patch API.
            "op": "merge",

            # The merge operation
            operates on the purchasable_offer
            attribute.
            "path":
"/attributes/purchasable_offer",

            "value": [
                {
                    # Merge operation
                    must provide non empty values for
