Notifications API

Learn how to subscribe to notifications that are relevant to a selling partner's business.

You use the [Notifications API](#) to subscribe to notifications that are relevant to your selling business. You can create a destination to receive notifications, subscribe to notifications, delete notification subscriptions, and more. Instead of polling for information, your application can receive information directly from Amazon when an event generates a notification to which you are subscribed.

You can subscribe to notifications on behalf of sellers or vendors. To determine whether you can subscribe to a notification type on behalf of sellers only, vendors only, or both, go to [notificationType](#) . We allow multiple subscriptions with different payload versions per application, notification type and party (seller/vendor). For supported payload versions of different notification types, refer to [notificationType](#) .

Build a backup mechanism

As a best practice, we recommend that you have a means to retrieve needed information in the event of an unexpected outage or delay in notification delivery.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers and Vendors	Static
