Process a Shipment

Learn how to process a shipment

Learn how to process a shipment.

🚧 Important

Before you process the shipment, you must retrieve the shipment using the `getShipments` or `getShipment` operation.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The shipment ID of the shipment you want to process.
- Approval for the [Direct-to-Consumer Shipping \(Restricted\) role](#) in your developer profile.
- The Direct-to-Consumer Shipping (Restricted) role selected in the App registration page for your application.

Overview

The workflow for processing a shipment is as follows:

Process a Shipment

invoice. Not applicable to Easy Ship, except in the India marketplace

Step 5. Call `generateShipLabels` to generate shipping labels

Step 6. Call `updatePackageStatus` to mark the shipment as `SHIPPED` (skip for Seller Flex and Easy Ship; Amazon automatically updates package status.), `OUT_FOR_DELIVERY`, or `DELIVERED` (for the Self Delivery program)

Process a Shipment - Step 1

Optional: call `retrieveInvoice`Optional: call `updatePackage` ↩ Step 3

Step 1. Acknowledge the shipment

Call the `processShipment` operation with the `shipmentId` of the shipment you want to process. Set the `operation` query parameter to `CONFIRM` to confirm the shipment.

Step 2. Create packages for the shipment

Call the `createPackages` operation with the `shipmentId` of the shipment you want to process and the list of packages in the shipment.

Step 3. Get shipping options for the shipment

Call the `retrieveShippingOptions` operation with the `shipmentId` of the shipment and `packageId` of the package to receive a list of shipping options for the package for the seller to choose. The response to this operation is null for the Seller Flex channel.

Step 4. Generate the shipment's invoice

Call the `generateInvoice` operation to generate the invoice for the shipment. This operation returns as encoded Base64 text that you can decode and convert to PDF to print.

This operation is not supported for the Easy Ship channel, except in the India marketplace.

Step 5. Generate shipping labels

Call the `generateShipLabels` operation with the `operation` query parameter set to `GENERATE` to generate shipping labels for the shipment. To retrieve the same shipping labels again, call `generateShipLabels` again and set `operation` to `GENERATE`.

The following are the supported label formats:

- **Seller Flex:** Either PNG/ZPL (Single Piece Shipments) or Only ZPL (Multi Piece Shipments)
- **Easy Ship:** PNG, ZPL, and PDF
- **Self Ship:** Only PNG

 **Note**

Ensure that you URL-encode `shippingOptionsId` before you pass it to the `generateShipLabels` operation.

Optionally, call `retrieveInvoice` . This optional step is not applicable to Easy Ship, except in the India marketplace.

Update the package [optional]

If you need to update package information after you call `createPackages` , call the `updatePackage` operation with the `shipmentId` and `packageId` of the package, and supply updated package information in the body of the request.

Step 6. Update the package status (not required for Seller Flex and Easy Ship programs World Wide)

Call the `updatePackageStatus` operation and set the `status` , `subStatus` , and `reason` values to the appropriate value in the following table. You may only update the status between 6 AM and 11:59 PM local time.

S. No.	status	subStatus	reason	State
1	SHIPPED	OUT_FOR_DELIVERY	OutForDelivery	Non terminal
2	DELIVERED	DELIVERED	DeliveredToCustomer	Terminal
3	DELIVERED	DELIVERED	DeliveredToHouseholdMember	Terminal
4	DELIVERED	DELIVERED	DeliveredToReception	Terminal
5	DELIVERED	DELIVERED	DeliveredToSecurityGuard	Terminal
6	SHIPPED	NOT_DELIVERED	Customer NotAvail	Non terminal

[Policies and Agreements](#)

Process a Shipment

S. No.	status	subStatus	reason	State
	D	RED	able	
7	SHIPPED	NOT_DELIVERED	MissedDelivery	Non terminal
8	SHIPPED	NOT_DELIVERED	CustomerContactIssue	Non terminal
9	SHIPPED	UNDELIVERABLE	RejectedByCustomer	Terminal
10	SHIPPED	UNDELIVERABLE	RejectedOrderDamaged	Terminal

 Note

This step is not required for the Seller Flex and Easy Ship programs worldwide. Amazon automatically updates the status to `SHIPPED` and `DELIVERED` based on the logistics updates during pickup and delivery. If the selling partner also marks the order as shipped, they receive a duplicate request exception if the order was already scanned by the delivery associate.

For the Self Delivery Program, you must mark the order as `OUT_FOR_DELIVERY` and `DELIVERED` on the same calendar day. If the delivery is attempted on any other day, mark it as `OUT_FOR_DELIVERY` again.
