Register as a Public SP-API Developer

Learn how to register as a public developer for the SP-API.

This topic explains how to register as a public developer for the Selling Partner API (SP-API).

Public developers:

- Build applications that serve sellers, vendors, or both.
- Obtain explicit authorization from each seller or vendor through [OAuth](#).
- Must list their application in the Amazon Selling Partner Appstore, in accordance with the [Solution Provider Agreement](#).

If you develop applications solely for

internal use by your organization, you can register as a private developer. For details, refer to [Register as a Private SP-API Developer](#).

Note

For information about SP-API fees, refer to [An Update on SP-API Fees](#) and [Understanding SP-API Metered and Unmetered Calls](#).

Prerequisites

Before you begin registration, complete the following tasks:

- **Review registration guidelines:** Familiarize yourself with the [registration recommendations](#).
- **Have your website URL:** When you register as a public developer, you must share a website URL that is publicly available and provides details about the services that your application offers

to Amazon sellers.

Websites that are not accessible, are under construction, have a security warning, or are log-in only are not accepted.

- **Choose your roles:**

Developer profile registration requires you to select an initial set of roles, which determine which API operations and data that your application can access. To determine which API operations and data (and therefore which roles) your application needs, review the [roles overview](#) and [role mappings documentation](#).

If you plan to request restricted roles (roles that provide access to personally identifiable information (PII)), you must also:

- **Prepare for an architecture review:** You will need to go through an architecture review with the SP-API Solutions Architecture team. The review includes a detailed explanation of

data flows and protection controls for PII. This process can involve a demo through screen sharing.

- **Prepare detailed use case information:** Be prepared to answer questions related to PII with as much detail as possible to support your use case.

Understand the review process

Amazon evaluates developer applications through a comprehensive review process. There are two distinct review paths: a standard review for most applications, and a more rigorous review for applications that request access to restricted roles. To help you prepare a strong application, familiarize yourself with the following processes.

Standard review process

The standard review involves the following steps:

1. Amazon evaluates your developer profile and focuses on:

Tutorial: Automate your SP-API Calls using a prebuilt C# SDK

Tutorial: Automate your SP-API Calls using prebuilt Java SDK

Tutorial: Automate your SP-API Calls using a prebuilt JavaScript SDK

Tutorial: Automate your SP-API Calls using prebuilt PHP SDK

Tutorial: Automate your SP-API calls using a prebuilt Python SDK

SECURITY AND COMPLIANCE

SP-API Security and Compliance Overview

Amazon Selling Partner API Guard Implementation Guide 

1. Application functionality.

2. Compliance with the [Acceptable Use Policy](#).

3. Compliance with the [Data Protection Policy](#).

4. Data security measures.

2. If Amazon needs additional information:

1. You receive questions through your case.

2. You must respond within five days.

3. Cases without responses within five days are closed.

4. Closed cases result in unchanged SP-API access.

Review process for restricted roles

If you apply for restricted roles as part of your developer profile, your developer profile review goes through the following phases.

Phase 1: Business verification review and developer profile assessment

In the initial phase, Amazon reviews your website for compliance with Amazon's acceptable use policies and guidelines. Your website must be publicly accessible and provide a clear description of your business and the services that you offer.

Amazon expects to see professional design and content standards maintained throughout the site, along with complete business contact information readily available to visitors. Your website must implement appropriate security measures, including the HTTPS protocol, and display a comprehensive privacy policy and terms of service documentation.

During this phase, Amazon also evaluates your developer profile to verify alignment with Amazon's data protection policies. Your profile submission should include detailed information about your intended use of the SP-API and explicitly explain how you plan to handle seller data. You must specify which

Register as a public developer

The first step in registration is to complete the developer profile form. This form collects essential information about:

- Your organization's contact details.
- The API data access that you need.
- Your security controls and use cases.
- Your compliance with Amazon's [policies and agreements](#).

Complete all fields accurately and thoroughly. Amazon evaluates this information to create your case and determine next steps. You might be asked to provide additional information or documentation during the review process.

Take the following steps to complete your developer profile:

1. Log in to one of the following tools:

FULFILLMENT BY AMAZON (FBA)
