What is the Selling Partner API?

Selling Partner API Onboarding Overview >

Terminology

Frequently Asked Questions >

Renew Authorizations

Renew your SP-API application authorization.

[Authorization](#) allows your Selling Partner API (SP-API) application to call the SP-API on the selling partner's behalf. For security reasons, the selling partner must re-authorize your public application every 365 days, or anytime you add a role to your application.

This topic explains:

- How selling partners reauthorize your application.
- How to test your reauthorization workflow.

Selling Partner API Roles >

To reauthorize your application, selling partners take the following steps:

1. Sign in to [Seller Central](#).
2. Navigate to **Manage Your Apps**.
3. Find the application (or use the link from Amazon's reauthorization notice).
4. Choose **Re-Authorize**.
5. Review and accept the data access requested.
6. Complete the sign-in process on the developer's website (if required).

Prepare for reauthorization

Your application must:

- Handle the reauthorization process using OAuth, just like the initial authorization process. This process mirrors the [Selling Partner Appstore authorization workflow](#).

INTEGRATION

[Building Robust Amazon SP-API Applications](#)[SP-API SDKs](#) >

Renew Authorizations

- Process the authorization code and exchange it for new tokens.
- Update the stored refresh token for the selling partner.

Test your reauthorization workflow

It is important to test the reauthorization workflow to ensure that your application can exchange parameters with Amazon and receive authorization information. If this workflow is not set up correctly, existing sellers and vendors might lose access to your application when they try to reauthorize annually.

While your application is in **Draft** status, test the reauthorization workflows in the following scenarios:

- The selling partner enters the [reauthorization flow](#) when they are already logged into your website.
- The selling partner enters the [reauthorization flow](#) when they aren't logged into your website.

Delete an Application From Your Developer Account

To test the reauthorization flow:

roles,
you
must
include
version=beta
in the
authorization
URI.

2. Visit the **Manage Your Apps** page within Seller Central or the Solution Provider Portal and choose the **Re-authorize** button to start the reauthorization workflow.

If you're testing your workflow with a trusted selling partner, make sure that they log in to their selling partner account on Seller Central and navigate to the **Manage Your Apps** page to initiate the workflow.

Amazon loads your log-in URI with similar parameters as in the [Selling Partner Appstore authorization workflow](#). Your website should detect that this selling partner has an existing account and proceed with

Renew Authorizations

the authorization sequence (handle the authorization code and refresh the stored token).

 Note

If your application is in **Draft** state, Amazon includes the **version=beta** parameter in authorization requests. This parameter is not included for published applications.
