Retrieve purchase order

Learn how to retrieve complete purchase order details.

The `getPurchaseOrder` operation uses the purchase order number to return information you specify about the purchase order. The response includes complete purchase order information, including line item details, quantity, and cost.

The following diagram shows the integration workflow when retrieving purchase orders:

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API Applications](#).
- The [Vendor Retail Procurement Orders role](#) assigned to your developer profile.

You must also meet the following business requirements for `getPurchaseOrder` :

- [General business requirements](#).
- [Country-specific business requirements](#).

General business requirements

- **Weight-based ordering**

For weight-based orders, the `unitOfMeasure` field (under `listPrice` and `netCost`) reflects the actual weight unit of measurement. The weight unit of measurement values includes `POUNDS` , `OUNCES` , `GRAMS` , and `KILOGRAMS` .

Special Authorization Types >

- **Ship window and delivery window usage**

Vendor-paid freights require that you specify delivery window information. Dates are represented in date time interval format in accordance with [ISO 8601](#). The format is the start and end date separated by a hyphen (-). The start date field represents the earliest date that Amazon expects the freight to be delivered to the Amazon fulfillment center listed on the purchase order. The end date field represents the latest date that Amazon expects the freight to be delivered to the Amazon fulfillment center listed on the purchase order.

Use the ship window information for Amazon-paid freights. The date is represented in date/time interval format according to [ISO 8601](#). The format is start and end date separated by a hyphen (-). The start date field represents the earliest date that Amazon expects to pick up the freight. The end date represents the latest date that Amazon expects to pick up the freight. If the same date is listed in the start date and end date fields, then read that date as the date that Amazon expects to pick up the freight.

- **Backorders**

The backorder policy is determined by your Amazon business representative. Read the value in the `isBackOrderAllowed` field in the `getPurchaseOrders` API response to determine whether a backorder is allowed. When `true`, the order can be processed as a backorder. When `false`, backorders are not accepted.

You must provide the price data for items on backorder. Amazon can then update the status of the order correctly. If the price is omitted, the acknowledgment is rejected.

Delete an Application From Your Developer Account

CALLING THE SP-API

Configuration Details >

- **Partial shipments**

Partial shipments are allowed if the purchase order allows backorders (when `isBackOrderAllowed` is `true`). You can indicate one acknowledgment loop using the code `accepted` with the corresponding date and another acknowledgment loop using the code `backordered` and the corresponding date.

Call Structure >

- Use `accepted` for the items that can be fulfilled immediately.

Development Tools >

- Use `backordered` for the remaining quantity that cannot be fulfilled immediately. The remaining quantity (ordered quantity minus all confirmed quantity) is delivered later (backordered).

Performance Management >

For more information, refer to the [Confirm partial item quantity and backorder the rest of the quantity](#) and [SubmitShipmentConfirmations](#).

- **Deal codes**

SELLING PARTNER APPSTORE

What is the Selling Partner Appstore?

List Your App on the Selling Partner Appstore

Deal codes are promotional codes reported in the `dealCode` field of the order. Any information related to promo codes, special discounts, or pricing is present in this field.

Note

Backorder cancellation dates may not be submitted in the order.

- **Use the API to change an order**

Submitting a change to an order using the API is not possible. After an order is placed, changing it is a manual process through Vendor Central.

Country-specific business requirements

Functionality	India	Europe	North America
Net cost	Conditional, either net cost or list price.	Conditional, either net cost or list price.	Conditional, either net cost or list price.
List price	Conditional, either net cost or list price.	Conditional, either net cost or list price.	Conditional, either net cost or list price.
Backorder	Not applicable.	Supported.	Supported.
Buying party	The address of the Amazon buying entity	The assigned party ID for the buying party.	Not applicable.
Selling party	The Amazon Vendor Code assigned to the vendor.	The Amazon Vendor Code assigned to the vendor.	The Amazon Vendor Code assigned to the vendor.
