# Role Mappings for SP-API Types

Learn which roles enable you to access SP-API feed types, notification types, and report types.

[Roles](#) control access to all API operations, reports, feeds, and notifications in the Selling Partner API (SP-API). When you create a developer account, you must request and qualify for the specific roles that align with your intended use of the SP-API. Amazon reviews all role requests, with additional scrutiny for restricted roles.

This document helps you determine which role you need to access specific SP-API types. The following points explain how roles work:

- Each type requires at least one role from its list of possible roles

Role Mappings for SP-API Operations

Role Mappings for SP-API Types

(unless the operation is marked as [grantless](#))

- For a given type, you don't need all listed roles; any one of them grants you access
- Vendors have access to the following roles: [Amazon](#) [Fulfillment](#), [Amazon](#) [Warehousing and Distribution](#), [Brand Analytics](#), [Direct to Consumer Shipping \(Restricted\)](#), and [Product Listing](#).

## Note

In the following sections, when a type's table lists multiple roles, you must be authorized for at least one of the roles to use the type. However, types that access restricted data (PII) typically require both a general
