SP-API Release Notes

SP-API Deprecation Schedule

SP-API Models

Directory for SP-API models and release notes

The following sections show all Selling Partner APIs (SP-APIs) and indicate whether the API is available for seller or vendor accounts. To identify the APIs, notifications, and reports that you need for specific use cases, refer to [SP-API Seller Use Cases](#) and [SP-API Vendor Use Cases](#).

For a complete summary of API updates, refer to [SP-API Release Notes](#). For releases prior to January 19, 2022, refer to [Announcements](#) in the [Selling Partner API GitHub repository](#).

For information about API deprecations, refer to the [SP-API Deprecation Schedule](#).

A+ Content Management API

You use the [A+ Content Management API](#) to create and edit [A+ Content](#).

Current version	Legacy versions	Availability	Sandbox
2020-11-01 (Reference Model)	None	Sellers and Vendors	Static

[Release notes](#)

Amazon Warehousing and Distribution API

You can use the Amazon Warehousing and Distribution (AWD) API to create and update inbound orders to ship inventory to AWD distribution centers, track inventory inside AWD distribution centers, and track shipments on the way to AWD distribution centers. For information about AWD API operations, data types,

SELLING PARTNER APPSTORE

- What is the Selling Partner Appstore?
- List Your App on the Selling Partner Appstore

► [Release notes](#)

! Important

The Delivery by Amazon API is in Restricted Availability (RA) status and is only available in the Brazil (BR) marketplace.

Easy Ship API

You use the [Easy Ship API](#) to build applications that help you manage and ship [Amazon Easy Ship](#) orders. You can schedule or reschedule Easy Ship packages. You can also get invoices, shipping labels, and warranties for scheduled Easy Ship orders.

Current version	Legacy versions	Availability	Sandbox
v2022-03-23 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

External Fulfillment Inventory

Use the External Fulfillment Inventory API to update and manage inventory on multiple Amazon fulfillment channels, including the following:

- Seller Flex / FBA Onsite
- Multi Seller Flex
- Easy ship
- Self ship
- MFN Self Delivery
- Amazon Pharmacy

Sellers who sell across multiple channels can use this API to publish absolute location-level inventory from their own inventory management systems, including POS, ERP, and WMS.

Current version	Legacy versions	Availability	Sandbox
v2024-09-11 (Reference Model)	None	Sellers only	Static

External Fulfillment Returns

Use the External Fulfillment Returns API to retrieve return information for Amazon External Fulfillment.

Current version	Legacy versions	Availability	Sandbox
v2024-09-11 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

External Fulfillment Shipping

Use the External Fulfillment Shipping API to retrieve and process customer orders.

Current version	Legacy versions	Availability	Sandbox
v2024-09-11 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

FBA Inbound Eligibility API

You use the [FBA Inbound Eligibility API](#) to get eligibility previews for items before you ship the items to Amazon's fulfillment centers.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

FBA Inventory API

You use the [Fulfillment by Amazon \(FBA\) Inventory API](#) to retrieve information and track the real-time availability of your inventory in Amazon's fulfillment network at the marketplace level. You can get details such as listing condition and inventory quantities such as:

A+ CONTENT API

A+ Content API >

A+ Content Examples

AMAZON WAREHOUSING AND DISTRIBUTION API

Amazon Warehousing and Distribution API >

Amazon Warehousing and Distribution API v2024-05-09 Reference

APP INTEGRATIONS API

App Integrations API >

- **Fulfillable:** Inventory that can be picked, packed, and shipped.
- **Inbound:** Inventory that is on its way to Amazon's fulfillment network.
- **Reserved:** Inventory in Amazon's fulfillment network that is being picked, packed, and shipped; or is sidelined for measurement, sampling, or other internal processes.
- **Unfulfillable:** Inventory that cannot be sold.
- **Researching:** Inventory that is misplaced or warehouse damaged units that are actively being confirmed at an Amazon fulfillment center.

This API is available in all marketplaces.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Dynamic

► [Release notes](#)

Feeds API

You use the [Feeds API](#) to upload data to Amazon to manage your selling business. There are feeds for a wide variety of use cases, such as creating listings, managing inventory and prices, acknowledging orders, and more. Refer to [Feed Type Values](#) for a list of available feed types.

Current version	Legacy versions	Availability	Sandbox
v2021-06-30 (Reference Model)	None	Sellers and Vendors	Static

► [Release notes](#)

Finances API

You use the [Finances API](#) to get financial information that is relevant to a seller's business. You can obtain financial events for a specified order or date range without having to wait until a statement period closes. Refer to the [Finances API Reference](#) for details about the operations and associated data types in the Finances API.

Current version	Legacy versions	Availability	Sandbox
v2024-06-19 (Reference Model)	v0	Sellers only	Static

► [Release notes](#)

Fulfillment Inbound API

You use the [Fulfillment Inbound API](#) to create and update inbound inventory to Amazon's fulfillment network, where Amazon can fulfill your customer's orders. You can also request lists of inbound shipments or inbound shipment items based on criteria you specify. After your inventory has been received in the fulfillment network, Amazon can fulfill your orders regardless of whether you are selling on Amazon's retail website or through other retail channels.

For details about API operations and associated data types and schemas, refer to the [Fulfillment Inbound API reference](#).

Current version	Legacy versions	Availability	Sandbox
v2024-03-20 (Reference Model)	v0	Sellers only	Static

► [Release notes](#)

Fulfillment Outbound API

You use the [Fulfillment Outbound API](#) to retrieve information about Multi-Channel Fulfillment (MCF) orders in Amazon's fulfillment network. You can create applications that help a seller fulfill Multi-Channel Fulfillment orders using their inventory in Amazon's fulfillment network. You can also get information on both potential and existing fulfillment orders.

> [Release notes](#)

Invoices API

You use the [Invoices API](#) to retrieve and manage invoices and help selling partners manage their bookkeeping.

!

Important
This API is only able to retrieve **Brazilian FBA invoices**. You cannot use this API for any other invoice types.

Current version	Legacy versions	Availability	Sandbox
v2024-06-19 (Reference Model)	None	Sellers only	Static

> [Release notes](#)

Listings Items API

Current version	Legacy versions	Availability	Sandbox
v2021-08-01 (Reference Model)	v2020-09-01	Sellers and Vendors	Static

> [Release notes](#)

Listings Restrictions API

You use the [Listings Restrictions API](#) to check if there are any restrictions that prevent the creation of a listing for an item in the Amazon catalog. This API supports checking multiple marketplaces for listings restrictions in a single call, and you can optionally filter the restrictions based on condition type. If an item is restricted, you might be able to take additional steps to request approval to create a listing. When approval is required, the API returns next step links so you can pursue approval to create the listing. Refer to the [Listings Restrictions API Reference](#) for details about API operations and associated data types and schemas.

You can use the Listings Restrictions API in conjunction with the [Listings Items API](#) . For example, you can first determine whether listings restrictions exist using the Listings Restrictions API. If no restrictions exist, you can then call the Listings Items API to create offer-only listings. Refer to the [Listings Items API Reference](#) for more information about the Listings Items API.

Current version	Legacy versions	Availability	Sandbox
v2021-08-01 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

Merchant Fulfillment API

You use the Merchant Fulfillment API to build applications for sellers to use Amazon Buy Shipping services to purchase shipping for non-Prime and Prime orders.

 **Note**
For new integrations, use the [Shipping API v2](#) instead.

Current version	Legacy versions	Availability	Sandbox
v0 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

Messaging API

You use the [Messaging API](#) to send messages to buyers.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Static

INVOICING

Invoices API

Invoices API FAQ

LISTINGS

Listings Items API

Notifications API

You use the [Notifications API](#) to subscribe to notifications that are relevant to your selling business. You can create a destination to receive notifications, subscribe to notifications, delete notification subscriptions, and more. Instead of polling for information, your application can receive information directly from Amazon when an event generates a notification to which you are subscribed.

You can subscribe to notifications on behalf of sellers or vendors. To determine whether you can subscribe to a notification type on behalf of sellers only, vendors only, or both, go to [notificationType](#) . We allow multiple subscriptions with different payload versions per application, notification type and party (seller/vendor). For supported payload versions of different notification types, refer to [notificationType](#) .

Build a backup mechanism

As a best practice, we recommend that you have a means to retrieve needed information in the event of an unexpected outage or delay in notification delivery.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers and Vendors	Static

► [Release notes](#)

Orders API

You use the Orders API to retrieve order information. You can develop custom applications that facilitate order synchronization and order research.

Current version	Legacy versions	Availability	Sandbox
v2026-01-01 (Reference Model)	v0	Sellers only	Static

Messaging API	>

Product Fees API

You use the [Product Fees API](#) to retrieve estimated fees for a product. You can then account for those fees in your pricing. You can use the `getMyFeesEstimates` operation to get product fee estimates for a list of products and marketplaces, and then set prices based on those fee estimates. You must specify your products by ASIN or SKU (not UPC, ISBN, or other identifiers).

You must include an original identifier in each product fees request. This identifier is included in the fees estimate so that you can correlate a fees estimate with an original request.

! Important

The estimated fees returned by this API are not guaranteed. Actual fees can vary.

Current version	Legacy versions	Availability	Sandbox
v0 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

Product Pricing API

You use the [Product Pricing API](#) to retrieve product pricing and offer information for products in the Amazon catalog. The Product Pricing API is designed to help you develop automated solutions that sellers can use to update and manage their prices. Building in automation for your sellers allows them to react faster to keep their prices competitive and attractive to customers.

★ Tip

The Product Pricing API supports the development of repricers. Repricers are automated pricing tools that can continuously monitor price points, competitor prices, and other relevant factors in order to adjust a seller's prices in real-time. Repricers use data and insights from Product Pricing and Notifications APIs to help sellers maintain a competitive price advantage.

REPLENISHMENT API
Replenishment API

Current version	Legacy versions	Availability	Sandbox
v2022-05-01 (Reference Model)	v0	Sellers only	Static

► [Release notes](#)

Product Type Definitions API

You use the [Product Type Definitions API](#) to search and retrieve attribute and data requirements for product types in the Amazon catalog. Amazon Product Type Definitions describe the attribute and data requirements for items in the Amazon catalog using JSON schemas.

Refer to the [Product Type Definitions API v2020-09-01 Reference](#) for details about API operations and associated data types and schemas.

Current version	Legacy versions	Availability	Sandbox
v2020-09-01 (Reference Model)	None	Sellers and Vendors	Static

► [Release notes](#)

Replenishment API

You can use the [Replenishment API](#) to retrieve information about a selling partner's replenishment program business. Currently, the Subscribe & Save replenishment program is supported. With the Replenishment API, you can create applications that return metrics about a selling partner's replenishment business performance and information about their replenishment program offers.

Some attributes or use cases might not be applicable to both sellers and vendors. Refer to the [Replenishment API v2022-11-07 reference](#) for details.

The Replenishment API is available wherever Amazon Subscribe & Save is live. The API is also available to vendors and Fulfillment by Amazon (FBA) selling partners.

Sellers API

You use the [Sellers API](#) to retrieve essential information about seller accounts and marketplaces. The returned information includes:

- The marketplaces in which the seller can list items
- The default language and currency of a marketplace
- Whether the seller has suspended listings
- Business information of the seller

For details about the operations, data types, and schemas of the Sellers API, refer to [Sellers API v1 Reference](#).

Services API

You use the [Services API](#) to get and modify service orders and manage your resources. You can

- Access service job details.
- Confirm or reschedule appointments.
- Set appointment resource assignments.
- Set job fulfillment data.
- Set resource capacity schedules that drive appointment availability for customers.
- Integrate services data for route and fulfillment planning.

After fulfillment, service Sellers can audit resource (for example, technician) performance by tracking on-time

start, service job completion within appointment windows, no-shows, and fulfillment breaks.

Post fulfillment, the Services API can measure seller and resource performance, set up payment dashboards for sellers, and analyze the actual demand against resource capacity schedules.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Static

► [Release notes](#)

Shipment Invoicing API

You use the [Shipment Invoicing API](#) to retrieve shipment invoice information for Fulfillment by Amazon (FBA) orders in the Brazil marketplace.
