SP-API Release Notes

Selling Partner API new features, software updates, and changelog.

For releases prior to January 19, 2022, refer to [Announcements](#) in the [Selling Partner API GitHub repo](#).

May 27, 2026

API changes

[Listings Restrictions API v2021-08-01](#)

- Added the optional `productType` query parameter to the [getListingsRestrictions](#) operation. You can use this parameter along with a brand name to evaluate GTIN exemption restrictions for a specific product type.

[Notifications API v1](#)

- Added the `filterExpressio`

n field to the [createSubscription](#) operation. You can use this field to filter events before notification delivery. Filters are applied to the notification payload using Common Expression Language (CEL) syntax.

- Added [DeliveryTipChangeEvent](#) as a supported order change type to the [OrderChangeEvent](#) notification schema. You can use this to track the status of a delivery tip for an order.

[Orders API v0](#)

The following updates apply to veterinary products:

- Added the [approvedAlternativeDetails](#) field to the [VerificationDetails](#) object in the [updateVerificationStatus](#) operation. You can use this field to submit pre-approved alternative product attributes.

- Added the `interimStatusDetails` field to the `VerificationDetails` object in the [updateVerificationStatus](#) operation. You can use this field to provide granular progress updates while an order is pending verification to indicate that a veterinarian has been contacted.
- Added the `ValidInterimStatusCodes` field to the `RegulatedOrderVerificationStatus` object in the [getOrderRegulatedInfo](#) response. This field returns the list of supported interim status codes and customer-facing descriptions that you can use when you provide an `interimStatusDetails`.

Orders API v2026-01-01

- Added the `breakdowns` array to the [getOrder](#) and [searchOrders](#) operations. You can use this attribute to show

an order's proceeds breakdown, including delivery tip information.

- Added the `FULFILLMENT_ORDERS` value to the `includedData` parameter in the `getOrder` and `searchOrders` operations. You can use this attribute to view the fulfillment ID for Easy Ship orders.

[Product Type Definitions](#) [API v2020-09-01](#)

- Added the optional `parentageLevel` query parameter to retrieve schemas for a specific listing parentage level. You can use this parameter to retrieve simplified schema requirements for standalone, variation child, or variation parent listings types. To learn how to use this parameter in your listings workflows, refer to the updated [Retrieve a Product Type Definition](#) and [Configure related Listings Items](#) guides.

Replenishment v2022-11-07

- Added the optional `filter` attribute to the `listOfferMetrics` and `getSellingPartnerMetrics` operations. You can use this `filter` to narrow metrics results by attributes such as `asins`, `skus`, `fulfillmentChannelTypes`, `brandNames`, `uniqueItems`, and `productGroups`.
- Added `DAY` as a new aggregation frequency for the `listOfferMetrics` and `getSellingPartnerMetrics` operations. You can use this aggregation to retrieve day-level metrics for intervals of up to 31 days.

Services API v1

- Updated the `getServiceJobByServiceJobId` operation to include vehicle information in the response, when relevant. Each element of the

`associatedItem`
`s` array that is a
vehicle has this
information in the
`linkedAssets`
array.

- Updated the `getServiceJobs` operation with the `productOrderIds` and `trackingIds` query parameters. You can use these parameters to find service jobs that use the products with the given product order IDs or tracking IDs. You can retrieve `productOrderIds` and `trackingIds` from the response to the `getServiceJobs` operation.

Documentation changes

- Added Industry Vertical Pricing (IVP) audience values to the [Listings Items API guide](#). Eligible third-party sellers in the US store can use IVP audience values in the `purchasable_off`
`er.audience` field.
- Added the [Create and Filter](#)

[Notifications](#)[Subscription](#) guide

for the

Notifications API.

This guide explains

how to create

subscriptions with

filter expressions

that control which

event notifications

you receive. You

can use the

`filterExpression` field to specify a

Common

Expression

Language (CEL)

expression that

evaluates each

event payload and

returns only events

that match your

criteria.

Deprecation notices

Deprecated SP-API

resources are no longer

in active development.

Calls to deprecated SP-

API resources will fail as

of their removal date.

SP-API deprecations,

refer to the [SP-API](#)

[Deprecation Schedule](#).

April 29, 2026

API changes

[External Fulfillment](#)

[Shipping v2024-09-11](#)

- Added support for the Easy Ship program for US

domestic
shipments.

- Added drop-off location details, such as the address, map URL, and distance, for shipments that the seller delivers to nearby drop-off locations.
- Added support for US customary units.

[Fulfillment Outbound v2020-07-01](#)

- Updated the `getPackageTrackingDetails` operation with two new `eventCode` values to support locker delivery:
 - `EVENT_801` : Package delivered to locker.
 - `EVENT_804` : Package picked up from locker.

[Orders API v2026-01-01](#)

- Added `TAX` and `PAYMENT` attributes to the `getOrders` and `searchOrders` operations to address discrepancies between Orders v0 and Orders v2026-01-01. These

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

April 1, 2026

API changes

[FBA Inbound Eligibility API v1](#)

- Added the `FBA_INB_0465` enum value to the `ineligibilityReasonList` in the [getItemEligibilityPreview](#) operation. You can use this value to better understand why a product is not eligible to inbound using the manufacturer's barcode.

[Feeds v2021-06-30](#)

- Added the optional query parameter

`enableContentEn`
`codingUrlHeader`
to the
`GetFeedDocumen`
`t` operation. You
can use this
parameter to allow
automatic
decompression by
HTTP clients.

ChannelType fields to the [listOfferMetrics](#)

response. You can use these fields to track performance at the offer level across AMAZON and MERCHANT fulfillment channels.

- Updated the [listOffers](#) operation to support inventory and delivery health filtering, sorting, and enriched offer details. You can use this operation to filter offers by delivery condition (paused, at-risk, or healthy), sort by inventory or price, and monitor stock levels and delivery health to better manage Subscribe and Save offers.
- Added the REVENUE_PENETRATION metric to [getSellingPartnerMetrics](#) operation. You can use this metric to measure the percentage of program revenue against total product revenue.

Fulfillment Outbound API >

Finances v0

- Financial events can now contain an `EBTRefundReimbursementOnlyEventList`, which is a list of EBT refund reimbursement events. EBT payments require that all transactions are between the seller and the customer. Because of this requirement, Amazon refunds the seller, and then the seller refunds the customer. This applies to the US marketplace.

Finances v2024-06-19

- Updated the `listTransactions` operation to filter by order ID, a unique identifier for an order. The order ID filter can be used to get the list of all transactions associated with an order. To use this filter, set the `relatedIdentifi`

`erName` query parameter to `ORDER_ID` and the `relatedIdentifierValue` parameter to the order ID.

INVOICING

Invoices API >

Invoices API FAQ

LISTINGS

Listings Items API >

[Invoices v2024-06-19](#)

- Added the `createGovernmentInvoice`, `getGovernmentInvoiceStatus`, and `getGovernmentInvoiceDocument` operations. These operations allow Brazilian sellers who use Fulfillment by Amazon (FBA) the ability to use the Invoices APIs for inbound shipments. This applies only to the Brazil marketplace.

[Orders API v0](#)

- Removed the `BuyerEmail` parameter from Fulfillment by Amazon (FBA) orders. Merchant Fulfilled Network (MFN) orders now require the Direct-to-Consumer Shipping role to access this field. Sellers should use the Buyer Communication role for the

Listings Items API Rate Limits

Listings Restrictions API >

Listings Restrictions API Rate Limits

Manage Product Listings with the Selling Partner API

Building Listings Management Workflows Guide

Messaging API to contact buyers after purchase.

Orders API v2026-01-01

- Launched a new version of the Orders API. The Orders API v2026-01-01 simplifies ten operations into two: `getOrder` and `searchOrders`. The `getOrder` operation retrieves complete order and item information in a single request. This reduces the number of requests that are needed and improves throttling.

Documentation changes

- Added the Orders API [migration guide](#) to assist with migration from the Orders API v0 to the new Orders API v2026-01-01. For more information about the Orders API v0 deprecation, refer to the [deprecation schedule](#).
- Added the [Get recommended browse nodes or item type](#)

December 3, 2025

API changes

[Data Kiosk API v2023-11-15](#)

- Added the `lostFeaturedOffer` to the `Traffic` data in the [Vendor Analytics dataset](#), available in the `manufacturingView` query. This value provides the percentage of product page views where your offer is not the Featured Offer. It is equal to the number of glance views where your item is not the Featured Offer divided by the total number of glance views.

[Delivery By Amazon API v2022-07-01](#)

- Added the `SelfShip` value to the `ProgramType`

enum. You can use this enum value to submit invoices for orders that sellers deliver directly to customers.

[External Fulfillment Shipping API v2024-09-11](#)

- Added the `reason` attribute to the `getShipments` and `getShipment` response. You can use this response to retrieve the corresponding reason for each shipment's `subStatus`. The reasons provide customers with more granular insight into why a shipment was marked as delivered or undelivered.

[Feeds API v2021-06-30](#)

- Updated the `JSON_LISTINGS_FEED` to include the `SKU` in the issues section. This change adds the `SKU` to the processing report to map issues back to the input in a more convenient way.

[Finances API v2024-06-19](#)

VENDOR RETAIL PROCUREMENT SHIPMENTS API

Vendor Retail Procurement Shipments API >

VENDOR RETAIL PROCUREMENT TRANSACTION STATUS API

Vendor Retail Procurement Transaction Status API >

Powered
by

- Updated the `listTransactions` operation to filter by `FinancialEventGroupId`, a unique identifier for the financial event group. To use this filter, set the `relatedIdentifierName` query parameter to `FINANCIAL_EVENT_GROUP_ID`. Set the `relatedIdentifierValue` parameter to the `FinancialEventGroupId` retrieved from the Finances API v0 `listFinancialEventGroups` operation.

**Fulfillment Inbound
v2024-03-20**

- Added `DISCOUNTED` and `BLOCKED` as possible `availabilityType` values, which describe the type of delivery window. A `DISCOUNTED` delivery window has an incentive for choosing it. A `BLOCKED` delivery window is unavailable for scheduling. This affects the `listDeliveryWin`

[dowOptions](#) and [getShipment](#) operations. You will not be able to select delivery windows with `BLOCKED` status after **February 28, 2026**.

- Updated delivery windows. All delivery windows will be set to one calendar week, a set of seven days starting on Sunday and ending on Saturday. Priority processing applies to shipments that arrive in their delivery window. Shipments arriving outside their delivery window may experience delays.

[Fulfillment Outbound API v2020-07-01](#)

- Removed the `amazonFulfillmentTrackingNumber` query parameter. For tracking-related queries, use the `packageNumber` query parameter with the [getpackagetrackingdetails](#) to retrieve shipment tracking information.

[Seller Wallet API v2024-03-01](#)

- Updated the `CreateTransaction` request fields to include `payeeContactInformation`. This information is required when the `bankAccountOwnershipType` in the request is set to `THIRD_PARTY`, and is used to support mandatory payee verification and registration processes.

[Vendor Direct Fulfillment Shipping API v1](#)

- Added new fields to support regulatory compliance requirements. These updates include:
 - `lotNumberSourceReference` for FDA Food Safety Modernization Act (FSMA 204) compliance.
 - `lotNumberSourceType` for FDA Food Safety Modernization Act (FSMA 204) compliance.

- `countryOfOrigin` to support product origin tracking.
- `regulationReferences` object to capture EU Due Diligence Regulation (EUDR) compliance data, including reference numbers, verification codes, and exemption details.

Documentation changes

- Added the [Manage Listings Issues](#) guide. This guide explains how to identify, retrieve, and troubleshoot Listings issues.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

October 1, 2025

API changes

Data Kiosk v2023-11-15

- Added the `customerReviews` and `customerReturnTopics` metrics to the [Vendor Analytics Data Kiosk dataset](#). These metrics provide information about customer reviews and reasons for returns.

External Fulfillment APIs

- Added the [External Fulfillment Inventory](#), [External Fulfillment Returns](#), and [External Fulfillment Shipping](#) APIs. These APIs allow programmatic handling of inventory, returns, and shipping across multiple external fulfillment channels, including Seller Flex, Easy Ship, Self Ship, and MFN Self Delivery.

Fulfillment Outbound v2020-07-01

- Added the ability to request signature confirmation upon delivery. To require a signature from

the recipient upon delivery, set `featureName` to `SIGNATURE_CONFIRMATION` in the `creatorFulfillmentOrder` request. This is only supported in the US marketplace.

Merchant Fulfillment v0

- Added the `ShippingServiceAdjustmentItemList` array to the `getEligibleShippingServices` operation. You can use this array to view the Fulfilled by Merchant (FBM) Ship+ cashback amounts.
- Added the `ShippingServiceRateWithAdjustments` field to the `getEligibleShippingServices` operation. You can use this field to see the carrier charge without cashback.
- Added the `FBM_SHIP_PLUS` flag to `ShippingServiceBenefits.IncludeBenefits` in the `getEligibleShippingServices` operation. You can use this flag to identify shipping methods that are

eligible for the FBM Ship+ benefits.

[Orders v0](#)

- Updated the `getOrderAddress` operation's `Name` response attribute from required to optional.

[Vendor Direct Fulfillment Orders v2021-12-28](#)

- Added the `hasCustomizableItems` response attribute to the `getOrder` and `getOrders` operations. You can use this attribute to determine if an order has customizable items.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

August 27, 2025

API changes

[Data Kiosk API v2023-11-15](#)

- **Analytics Sales and Traffic v2024-04-24:** The `analytics_salesAndTraffic_2024_04_24` dataset now offers the `salesAndTrafficTrends` query, which provides ASIN-level trend analysis, and combines existing by-ASIN and by-date views to provide daily, weekly, or monthly metrics for specific ASINs over time.

[Fulfillment Inbound API v2024-03-20](#)

The `sourceAddress` property used in the requests to [createInboundPlan](#) and [updateShipmentSourceAddress](#) now includes the `districtOrCounty` property. This change allows you to use the [Fulfillment Inbound API](#) to create shipments in the TR marketplace.

The `districtOrCounty` property is included in the address values returned by the following operations:

- [listInboundPlans](#)
- [getInboundPlan](#)
- [getShipment](#)

[Fulfillment Outbound API v2020-07-01](#)

- The `getFulfillmentOrder` operation now returns the `amazonFulfillmentTrackingNumber` property. You can use this property in your request to the `getPackageTrackingDetails` operation to track Multi-Channel Fulfillment (MCF) packages.

[Product Fees API v0](#)

- Removed the `itemPrice` field from the `previewContext` attribute.
- Updated the `feeTransactionId` operation's response from `feeTransactionContext` to `transactionContext`.

[Reports API v2021-06-30](#)

- Added the `unitOnTimeDeliveryRate` response attribute to the [Seller Performance report](#)(`GET_V2_SELLER_PERFORMANCE_REPORT`). You can use this attribute to get a seller's on-

time delivery rate at a unit level within a reporting date range for one marketplace that you specify. This metric is only available in the US marketplace.

[Seller Wallet API v2024-03-01](#)

- The [Seller Wallet API](#) is now publicly available in the NA and EU regions.

Documentation changes

- Added the [Amazon listing status and seller-fulfilled inventory management](#) guide. This guide explains how to manage your Amazon product listings and inventory with the Selling Partner APIs.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

June 25, 2025

API changes

[Customer Feedback API v2024-06-01](#)

- The new [Customer Feedback API](#) retrieves insights from customer reviews and returns. This API provides the same information as the Product Opportunity Explorer on Seller Central and Vendor

Central. For more information, refer to the [Customer Feedback API v2024-06-01 Use Case Guide](#).

[Finances API v2024-06-19](#)

- The `listTransactions` operation now identifies Amazon Haul transactions. If a transaction is an Amazon Haul transaction, the value of the `storeName` property in the `listTransactions` response is `AMAZON_HAUL`.
- The `listTransactions` operation of the Finances API v2024-06-19 can now filter by transaction status. Include the `transactionStatus` query parameter in your request and set it to the status of transaction you want included in the response. Possible values are `RELEASED`, `DEFERRED`, and `DEFERRED_RELEASED`.

[Fulfillment Inbound API](#)

- The following operations in the Fulfillment Inbound API now have a rate limit of five requests per second, up from their previous limit of two requests per second:
 - [getShipment](#)
 - [listShipmentsBoxes](#)
 - [listDeliveryWindowOptions](#)
 - [listTransportationOptions](#)
 - [getInboundOperationStatus](#)
 - [getLabels](#) (Fulfillment Inbound API v0 operation)

Orders API v0

- Added the `FBM_SHIP_PLUS` value for the `AmazonPrograms` response object of the [getOrderItems](#) operation. You can use this value to determine if an order item is part of the FBM Ship+ program.

Product Pricing API v2022-05-01

- Added the `CompetitivePrice` value to the `getCompetitiveSummary` operation. You can use this value to determine featured offer eligibility based on the lowest price recently found at a reputable retailer outside of the Amazon store.

[Reports API v2021-06-30](#)

- Updated the [Search Query Performance Report](#) to include the ability to query a space-separated list of ASINs.

Documentation changes

- Added the granular [rate limit throttle messages](#) for the Listings Items API.
- Released the prebuilt SDK for C#. For more information, refer to [SP-API SDKs](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations,

refer to the [SP-API Deprecation Schedule](#).

[Reports](#)

The following report type values will be removed on December 11, 2025:

- GET_FBA_SNS_FOR
ECAST_DATA
- GET_FBA_SNS_PER
FORMANCE_DATA

[Feeds](#)

The removal date for the following Feeds type values has changed from June 30, 2025 to July 31, 2025.

- POST_PRODUCT_DATA
- POST_INVENTORY_AVAILABILITY_DATA
- POST_PRODUCT_OVERRIDE_DATA
- POST_PRODUCT_PRICING_DATA
- POST_PRODUCT_IMAGE_DATA
- POST_PRODUCT_RELATIONSHIP_DATA
- POST_FLAT_FILE_INVLOADER_DATA
- POST_FLAT_FILE_BOOKLOADER_DATA
- POST_FLAT_FILE_CONVERGENCE_LISTINGS_DATA
- POST_FLAT_FILE_LISTINGS_DATA

- `POST_FLAT_FILE_PRICEANDQUANTITY_ONLY_UPDATE_DATA`
- `POST_UIEE_BOOKLOADER_DATA`

For more information, refer to [Migrating product feeds workflows](#).

- The following operation in the [Product Pricing API v2022-05-01](#) will be removed on September 30, 2025:
 - `CompetitivePriceThreshold`

May 28, 2025

API changes

[Sales API v1](#)

- The `getOrderMetrics` operation of the Sales API now has an optional query parameter `amazonProgram` that you can use to retrieve sales metrics for the Amazon Haul program. The Amazon Haul program is only available in the US marketplace.

[Listings Items v2021-08-01 API](#)

- Added support for the JSON Patch `merge` operation to the Listings Items v2021-08-01 API. You can use this operation to update the quantity field in `fulfillmentAvailability` without including optional fields like `restock_date` or `lead_time_to_ship_max_days` . You can also use the `merge` operation to delete the `quantity_discount_plan` from `purchasable_offer` for B2B offers. For more information, refer to [Tutorial: Merge a listing](#).

[Product Pricing v2022-05-01](#)

- Added the `DEFAULT` enum value for the `customerMembership` operation that the `FeaturedOfferSegment` uses.
- Updated the enum value for the `OfferType` input in the `lowestPricedOffersInputs` array from `CONSUMER` to `Consumer` .

Documentation changes

- Added documentation that explains how service providers can migrate from Service Provider Central to Solution Provider Portal. For details, refer to [Service Provider Registration and Migration](#).
- Improved the structure and clarity of the authorization documentation. For the revised content, refer to the complete [Authorize Applications](#) section.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

[APIs](#)

- [Catalog Items API v0](#)
 - `listCatalogCategories`
-

April 30, 2025

API changes

[Seller Wallet API v2024-03-01](#)

- The Selling Partner API for Seller Wallet (Seller Wallet API) provides financial information that is relevant to a seller's Seller Wallet account. You can obtain financial events, balances, and transfer schedules for Seller Wallet accounts. You can also schedule and initiate transactions. For tutorials about how to use the Seller Wallet API, refer to the [Seller Wallet API v2024-03-01 Use Case Guide](#). **This API is only available in private beta.**

[Finances API v2024-06-19](#)

- Deferred transactions that become released are now distinguished with a `transactionStatus` of `DEFERRED_RELEASED`.

Documentation changes

- The [terminology page](#) now features a more comprehensive set of terms. Hover over underlined terms throughout the documentation to see their definitions.
Example: REST.
- Added [Onboarding to the SP-API](#), a step-by-step guide that walks you through Selling Partner API integration. This 10-step tutorial covers the complete integration process, from initial registration to listing an application. The tutorial includes sections on sandbox testing, authorization workflows, and production deployment.
- Added the [Shipment Invoicing API v0 Use Case Guide](#), which details how to retrieve shipment information and submit a shipment invoice.
- Added the [automated pricing](#)

[rules](#) guide, which details how to manage automated pricing rules programmatically.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

April 2, 2025

API changes

[Services API v1](#)

- Added the `estimatedArrivalTime` parameter to the [setAppointmentFulfillmentData](#) request. You can use this parameter to provide the range of time when a technician is expected to arrive at a fulfillment location.

Documentation changes

- Released prebuilt SDKs for Java and PHP. For more information, refer to [SP-API SDKs](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

February 27, 2025

Documentation changes

[SP-API Product Metadata Update](#)

- Added a [SP-API Product Metadata Updates](#) page, which shows the metadata changes for all product types in the affected marketplaces.
-

February 26, 2025

API changes

[Amazon Warehousing and Distribution API v2024-05-09](#)

- Added the following operations to the Amazon Warehousing and Distribution (AWD) API v2024-05-09:
 - [createInbound](#) : Creates a

draft AWD inbound order with a list of packages for inbound shipment. The operation creates one shipment per order.

- [`getInbound`](#) : Retrieves an AWD inbound order.
- [`updateInbound`](#) : Updates an AWD inbound order that is in `DRAFT` status and not yet confirmed. Use this operation to update the `packagesToInbound` , `originAddress` , and `preferences` attributes.
- [`cancelInbound`](#) : Cancels an AWD Inbound order and its associated shipment.
- [`confirmInbound`](#) : Confirms an AWD inbound order in `DRAFT` status.
- [`getInboundShipmentLabels`](#) : Retrieves

the box labels for a shipment ID that you specify. This is an asynchronous operation. If the label status is `GENERATED`, then the label URL is available.

- [`updateInboundShipmentTransportDetails`](#) : Updates transport details for an AWD shipment.
- [`checkInboundEligibility`](#) : Determines if the packages you specify are eligible for an AWD inbound order.
- Added a tutorial that shows how to create an inbound order for shipment to AWD. For more information, refer to [Tutorial: Create an inbound order for shipment to AWD](#).

[Feeds API v2021-06-30](#)

- Added the `includedData` array to the [JSON_LISTINGS_FE](#)

[ED](#). If you specify the `includedData` array in the feed header, the report includes a list of issues that occur after the acceptance of your listing submission.

- The [Building Listings Management Workflows Guide](#) now includes guidance on how to use the `includedData` array of the `JSON_LISTINGS_FEED` to retrieve issues that occur after the acceptance of your listing submission. For more information, refer to [Create and update listings items in bulk](#).

[Fulfillment Outbound v2020-07-01](#)

- Added `deliveryWindow` to the `getPackageTrackingDetails` response. This property provides sellers with a time window that describes when a package is expected to be delivered.

[Reports API v2021-06-30](#)

- Added two new [Analytics Reports](#):
 - Search Catalog Performance Report:
Provides search engagement metrics such as impressions, clicks, cart adds, and purchases for a specified date range.
 - Search Query Performance Report:
Provides overall query performance, such as impressions, clicks, cart adds, and purchases for a given ASIN and specified date range.

[Vehicles API v2024-11-01](#)

- Added the Vehicles API v2024-11-01, which you can use to retrieve information about vehicles, including their unique identifiers. You can use this information and the [Listings API](#) to provide the list of

vehicles with which
your listed ASINs
are compatible.

Documentation changes

- Added a topic that lists the required roles for every SP-API operation, feed type, notification type, and report type. You can use this information to help you select roles when you register as a developer. For details, refer to [Role Mappings](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

[Feeds](#)

The removal date for the following Feeds Type Values has changed from Mar 31, 2025 to June 30, 2025.

- POST_FLAT_FILE_BOOKLOADER_DATA
- POST_FLAT_FILE_CONVERGENCE_LISTINGS_DATA
- POST_FLAT_FILE_INVLOADER_DATA

- `POST_FLAT_FILE_LISTINGS_DATA`
- `POST_FLAT_FILE_PRICEANDQUANTITY_ONLY_UPDATE_DATA`
- `POST_INVENTORY_AVAILABILITY_DATA`
- `POST_PRODUCT_DATA`
- `POST_PRODUCT_IMAGE_DATA`
- `POST_PRODUCT_OVERRIDE_DATA`
- `POST_PRODUCT_PRICING_DATA`
- `POST_PRODUCT_RELATIONSHIP_DATA`
- `POST_UIEE_BOOKLOADER_DATA`

For more information, refer to [Migrating product feeds workflows](#).

January 29, 2025

API changes

[Amazon Warehousing and Distribution API v2024-05-09](#)

- Added the optional response parameter `replenishmentQuantity` to the [listInventory](#) operation. You can use this parameter to review quantity

information for units that are in transit from Amazon Warehousing and Distribution (AWD) to a Fulfillment by Amazon (FBA) facility.

[Data Kiosk v2023-11-15](#)

- The Vendor Analytics dataset now includes metrics such as `sellableInTransitInventory`, `unsellableInTransitInventory`, `mostRecentSubmitted`, `netOrderedGMS`, and `netShipmentGMS`. You can use these metrics to monitor inventory availability, identify fulfillment issues, and understand your sales performance.

[Fulfillment Inbound API v2024-03-20](#)

- The response of the `listPackingOptions` operation now describes acceptable packing methods and package weights in the `supportedConfigurations` property. This

property replaces the `supportedShippingConfiguration` property.

[Product Pricing API v2022-05-01](#)

- Added `sampleLocation` to the response of the `getCompetitiveSummary` operation and the request of the `getFeaturedOfferExpectedPriceBatch` operation. You can use this metric to return location information for featured offers and to retrieve a location-specific feature offer expected price (FOEP).

[Reports API v2021-06-30](#)

- Updated the [End User Data Report](#) to include support for the Ireland (IE) marketplace.

Documentation changes

- Added a new, interactive [API reference](#) for each API, where you can dynamically create requests in

multiple languages.

- Added notes the [welcome](#) and [errors FAQ](#) pages to improve the discoverability of the [API Health Dashboard](#).
- Restructured the [VAT Calculation Service guide](#) to improve flow and readability.
- Updated the [Vendor Retail Procurement APIs v1 Use Case Guide](#) to include the following operations for business requirements:
`getPurchaseOrder`,
`SubmitShipmentConfirmations`,
`submitInvoices`,
and
`GetShipmentDetails`.
- Added a rate limit topic for each API. These new topics list the usage plans (rate limits and burst values) for each operation. For an example, refer to [Data Kiosk API Rate Limits](#).
- Added a tutorial that shows how to use SP-APIs to retrieve and pass a

purchase order number to UPS, FedEx, or USPS. For details, refer to [Tutorial: Retrieve and Pass a Purchase Order Number to a Carrier](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

- The removal date for select [Catalog Items API v0](#) operations has changed from December 11, 2024 to March 31, 2025. The affected operations are:
 - `listCatalogItems`
 - `getCatalogItem`

December 18, 2024

API changes

[Amazon Warehousing and Distribution API v2024-05-09](#)

- Added the expiration property to the

`listInventory`

and

`getInboundShipm`

`ent` responses.

You can use this property to get the expiration date of a perishable item in your shipment.

For more information, refer to [Track an inbound shipment with expected and received SKU details](#).

- Added the `prepDetails` property to the `listInventory` and `getInboundShipm`
`ent` responses. You can use this property to get the preparation details on an item, including the preparation owner, category, instructions, and label owner.

[Data Kiosk API v2023-11-15](#)

- The [Vendor Analytics dataset](#) now includes metrics such as Confirmed Units, Shipped COGS, MSRP, and customer ZIP Code data.

[Listings Items API v2021-08-01](#)

- Added the `searchListingsItems` operation. You can use this operation to return information for multiple listings items based on filters, which include listing IDs, issues, status, and creation date.

Replenishment API v2022-11-07

- Added `REVENUE_BY_DELIVERIES`, `SUBSCRIBER_RETENTION`, `REVENUE_PENETRATION_BY_SELLER_FUNDING`, and `SHARE_OF_COUPON_SUBSCRIPTIONS` metrics to the `getSellingPartnerMetrics` operation response. These metrics describe the revenue sources and subscription performance.
- Added the `SHARE_OF_COUPON_SUBSCRIPTIONS` metric to the `listOfferMetrics` operation response. This metric describes the coupon acquisition performance.

[Sellers API v1](#)

- Added the `storeName` property to the `getMarketplaceParticipations` response. You can use the `storeName` property to get the name of the seller's store as displayed in the marketplace.
- Added the `MarketplaceParticipationList` array to the `getAccount` response. The `MarketplaceParticipationList` array replaces the array of `MarketplaceLevelAttributes`.
- Removed the `sellingPlan` parameter from the `MarketplaceParticipationList` array and added it to the root level of the `getAccount` response. For more information, refer to the [Sellers API v1 Use Case Guide](#).
- The `getAccount` operation requires the [Account Information Service Provider \(AISP\)](#) role. For

more information about this role, refer to [Third-Party Provider Registration](#).

Transfers API v2024-06-01

- The [Transfers API v2024-06-01](#) is now generally available. You can use this API to retrieve information about the payment methods associated with a seller and initiate payouts to a seller's deposit method on file. To use this API, you must select one of the following roles in the app registration page for your application:
 - [Payment Initiation Service Provider \(PISP\)](#) role
 - [Account Information Service Provider \(AISP\)](#) role
 - [Finance and Accounting](#) role.

This API is available in the EU region.

Vendor Direct Fulfillment Shipping API v2021-12-28

- Added the `createContainerLabel` operation. You can use this operation to create a container (pallet) label.

Vendor Shipments API v1

- The `GetShipmentLabels` operation of the Vendor Shipments API v1 now supports the ability to retrieve small parcel labels for vendors.

Seller Central Marketplace Expansion to Ireland (IE)

On December 10, 2024, Seller Central launched support for the Ireland (IE) Marketplace. For more information, refer to the [SP-API Seller Central URLs](#), [SP-API Endpoints](#), and [Marketplace IDs](#) topics in the SP-API documentation.

Third-party provider support for UK and EU SP-API developers

Sellers in the UK and EU can now authorize third-party provider (TPPs) to access an account holder's account and payment

services using the [AISP](#) and [PISP](#) roles.

For more information, refer to [Third-Party Provider Registration](#) and [Third-Party Provider Signature Guidance](#).

Documentation changes

- Updated guidance on how to handle [null enum values](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For a complete list of SP-API deprecations, refer to the [SP-API Deprecation Schedule](#).

- The removal date for select [Catalog Items API v0](#) operations has changed from December 11, 2024 to January 28, 2025. The affected operations are:
 - `listCatalogItems`
 - `getCatalogItem`
- The removal date for the [Notifications](#) type value

`LISTINGS_ITEM_I`
`SSUES_CHANGE`
(payload version
1.0) has changed
from December 11,
2024 to March 26,
2025.

November 14, 2024

API changes

[Easy Ship v2022-03-23](#)

- Updated the [EasyShip API v2022-03-23](#) for additional marketplace support in the Netherlands (NL) and Poland (PL).
-

November 12, 2024

API changes

[Product Pricing API v2022-05-01](#)

- Added `WasPrice` to the `getCompetitiveSummary` operation (in the `referencePrices` list in the operation response). `WasPrice` is the 90-day median price that customers pay for the product on Amazon. You can use this value to set promotions and

discounts based on the typical price on the product detail page.

November 11, 2024

API changes

[Transfers API v2024-06-01](#)

- Updated the rate limit for the `initiatePayout` operation from 0.5 to 0.017 and updated the burst rate from 30 to 2.

November 6, 2024

API changes

[Finances V0 API](#)

- Added the `TransactionNumber` parameter to the `AdjustmentItem` object. You can use this parameter to identify what the adjustment is related to. For example, Amazon Shipping customers can use this to get an invoice number that they can use to identify an Amazon Shipping invoice.

[Fulfillment Outbound API](#) [v2020-07-01](#)

- Added the following to the [Fulfillment Outbound API v2020-07-01 Use Case Guide](#):
 - `items` now has quantity limitations (maximum of 100 line items with a maximum of 250 units per order).
 - `shippingSpecifiedCategory` now has shipping method service-level agreements that vary by marketplace.
 - `DeliveryPreferences` now has the default delivery preference set to leave the package unattended at the front door for eligible orders.

[Merchant Fulfillment API](#) [v0](#)

- Updated the `getEligibleShippingServices` and `createShipment` operations to

include new
increased
throttling rates.

[Product Pricing API](#) [v2022-05-01](#)

- Added Japan (JP) marketplace support for the [getFeaturedOfferExpectedPriceBatch](#) operation. You can now retrieve the Featured Offer Expected Price (FOEP) for all marketplaces.

Documentation changes

- Added the following information to [Usage Plans and Rate Limits](#):
 - Details about the rate-limiting algorithm
 - Factors that influence rate limits
 - How to find your rate limits
- Added the following API-specific rate limits pages:
 - [Catalog Items API Rate Limits](#)

- [Feeds API Rate Limits](#)
- [Listings Items API Rate Limits](#)
- [Listings Restrictions API Rate Limits](#)
- [Product Type Definitions API Rate Limits](#)
- Added new, interactive references for the following APIs:
 - [Catalog Items v2022-04-01](#)
 - [Orders v0](#)
 - [Reports v2021-06-30](#)
 - [Feeds v2021-06-30](#)
 - [Fulfillment Inbound v2024-03-20](#)
 - [Listings Items v2021-08-01](#)
 - [Vendor Invoices v1](#)
 - [Vendor Shipments v1](#)

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For more information about SP-API

deprecation dates, refer to the [SP-API Deprecation Schedule](#).

Notifications

- LISTING_ITEM_ISSUES_CHANGE
payload version 1.0

October 14, 2024

API changes

[Fulfillment Inbound API v2024-03-20](#)

- Added the `listPrepDetails` and `setPrepDetails` operations to get and set preparation details.

[Notifications API v1](#)

- Added the `TRANSACTION_UPDATE` notification that is sent whenever there is a new transaction posted to the seller's account.

Documentation changes

- Added the [Schedule Data Kiosk Queries](#) guide, detailing how to automatically make regular calls to `createQuery`.
- New [Fulfillment Inbound code samples](#).

September 25, 2024

API changes

[Data Kiosk API v2023-11-15](#)

- Added `GroupByAttributes` to the [analytics vendorAnalytics 2024 09_30](#) schema. These attributes detail the location to which items are shipped:
 - `shipToCountryCode`
 - `shipToCity`
 - `shipToStateOrProvince`

[FBA Inventory API v1](#)

- Updated the `GetInventorySummariesResponse` to include a new `Stores` array. `Stores` contains a list of seller-enrolled stores for the affected inventory item.

[Notifications API v1](#)

- Updated the [FBAInventoryAvailabilityChangeNotification](#) object to include a new `Stores` array. `Stores` contains a list of seller-enrolled stores for the affected inventory item.

[Finances API v0](#)

- Added the optional `storeName` field

to

`listFinancialEvents` response.

This field provides the store where the transaction took place, and is contained in the following objects:

- `ShipmentEvent`
- `PayWithAmazonEvent`
- `ServiceFeeEvent`
- `RemovalShipmentEvent`

[Finances API v2024-06-19](#)

- New [Finances API v2024-06-19](#) provides financial information that is relevant to a seller's business. You can use this API to obtain financial events for a specified order or date range without having to wait until a statement period closes.

[Invoices API v2024-06-19](#)

- New [Invoices API for Brazil marketplace](#) that you can use to search for and retrieve invoices based on specific criteria, and

asynchronously
download the
returned invoices.
For more
information, refer
to the [Invoices API
Use Case Guide](#).

[Orders API v0](#)

- Added the `AmazonPrograms` attribute to the `getOrderItems` response. This attribute contains the list of programs that are associated with an item, such as **Subscribe and Save**.

Documentation changes

- Updated the [Price Adjustment Automation Workflows Guide](#) to include Price Feed migration strategies and bulk price updates using the `JSON_LISTINGS_FEED`.
- Updated the [Product Pricing API and Notifications FAQ](#) to include:
 - [The differences between the PRICING HEADLINE and ANY OFFER_C](#)

[HANGED](#)

[notifications.](#)

- [How to use the `getCompetitiveSummary` operation.](#)
- New [Product Pricing API code samples](#), which demonstrate how to:
 - Retrieve and map SKU data.
 - Fetch SKU price.
 - Calculate new SKU price.
 - Submit new SKU price.
- New [B2C Pricing sample solution on GitHub](#), which includes:
 - Repricing against `PRICING_HEALT` notifications in Java and Python.
 - Repricing logic against `ANY_OFFER_CHANGED` notifications in Java and Python.
- [New B2B Pricing sample solution on GitHub](#), which includes:

- Repricing logic against `ANY_OFFER_CHANGED` notifications in Java
- Quantity Tier discount feature in Java

[Notifications](#)

- `LISTING_ITEM_ISSUES_CHANGE`
payload version 1.0

September 11, 2024

API changes

[EasyShip API v2022-03-23](#)

- Added support for the Japan (JP) marketplace. For more information on the marketplaces that support Easy Ship operations, refer to the [EasyShip API v2022-03-23 marketplace support table](#).

[Fulfillment Outbound API v2020-07-01](#)

- Added an optional field, `deliveryInformation`, to the `GetFulfillmentOrder` response. You can use this to get the

`deliveryDocumentList`, which can have a photo or signature for a delivered Multi-Channel Fulfillment Outbound shipment. You can use `dropOffLocation` to get where the shipment package was delivered.

[Listings Items API v2021-08-01](#)

- The [Listings Items API v2021-08-01](#) and [JSON_LISTINGS_FEED](#) feed type now support Amazon Business (B2B) pricing functionality.
- The new [Manage Advanced Multiple-Offer and Multiple-Fulfillment Use Cases guide](#) demonstrates how selling partners who are enrolled in the Amazon Business (B2B) program can create multiple offers on a listing, which creates differential pricing between regular buyers on Amazon websites (such as Amazon.com) and business buyers on

Amazon Business websites.

Orders API v0

- Added new optional verification details properties to the `regulatedInfo` operations. Sellers can use these details to verify orders that contain prescriptions.
- The [Regulated orders guide](#) includes a [new tutorial](#) on how to provide additional details about the verification of an order that contains regulated information.

Product Pricing API v2022-05-01

- Updated the `getFeaturedOfferExpectedPriceBatch` to no longer require `offerIdentifier` in the `FeaturedOfferExpectedPriceResponseBody`. The `offerIdentifier` parameter is now optional in order to correctly deserialize `getFeaturedOfferExpectedPriceBatch` error responses, as

`FeaturedOfferExpectedPriceResponseBody` doesn't provide `offerIdentifier` in the response when there are errors.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For more information about SP-API deprecation dates, refer to the [SP-API Deprecation Schedule](#).

August 19, 2024

API changes

[Amazon Warehousing and Distribution API v2024-05-09](#)

- Added the optional response parameter `totalInboundQuantity` to the [listInventory](#) operation. You can use this parameter to track inventory in transit to Amazon Warehousing and Distribution.
- Added a new optional request parameter `skuQuantities`

to the `getInboundShipment` operation. You can use this parameter to reconcile and compare expected and received inventory for each SKU in a shipment.

You can now use the Amazon Warehousing and Distribution API to:

- Track inventory in-transit to Amazon Warehousing and Distribution to improve end-to-end inventory view.
- Reconcile and compare expected and received inventory for each SKU in a shipment.

August 14, 2024

API changes

[FBA Inbound Eligibility API v1](#)

- Added a new inbound ineligibility enum value, `FBA_INB_0342` in the `getItemEligibilityPreview` operation. This value provides more information on why an offer can't use certain

manufacturer
barcodes.

Sellers API v1

- Added the `getAccount` operation to retrieve information about seller accounts.

Vendor Orders API v1

- Added a new `unitOfMeasure` variable to support variable weight products. This variable provides the unit of measure for prices of items sold by weight. If this field is absent, the item is sold by eaches. Operations that return this variable include:

- `getPurchaseOrders`
- `getPurchaseOrder`
- `submitAcknowledgement`
- `getPurchaseOrdersStatus`

Documentation changes

- The new [Services API v1 Use Case Guide](#) outlines how to access service job details and

confirm or
reschedule
appointments
using the [Services
API v1](#).

Deprecation notices

Deprecated SP-API
resources are no longer
in active development.
Calls to deprecated SP-
API resources will fail as
of their removal date.
For more information
about SP-API
deprecation dates, refer
to the [deprecations
table](#).

The following
operations in the
[Catalog Items API v0](#)
were deprecated on
September 30, 2022
and will be removed on
September 25, 2024:

- `listCatalogItems`
- `getCatalogItem`

July 31, 2024

API changes

[Fulfillment Outbound API v2020-07-01](#)

- Added the
`queryStartDate`
parameter to the
[getFeatureInventory](#)
operation.
You can use this
parameter to
select inventory
that has been
updated since a
specified date.

- The [Fulfillment Outbound API v2020-07-01 Use Case Guide](#) provides steps on how to pass the `queryStartDate` parameter when retrieving a list of inventory items that are eligible for a specified fulfillment feature.

Documentation changes

The Selling Partner API Blog will be removed on **July 31, 2024**. For technical guidance on Selling Partner APIs, refer to the [SP-API Documentation site](#).

For supplementary guidance on Selling Partner APIs, refer to [Developer University](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail as of their removal date. For more information about SP-API deprecation dates, refer to the [deprecations table](#).

The following operations in the [Catalog Items API v0](#) were deprecated on **September 30, 2022** and will be removed on **September 25, 2024**:

- `listCatalogItems`
 - `getCatalogItem`
-

July 8, 2024

API changes

[Merchant Fulfillment v0 API](#)

- Added the `Benefits` object, which contains a list of included and excluded Amazon benefits from a shipping service offer. Each excluded benefit has a list of reason codes for why it is excluded. Benefits represent services provided by Amazon (for example, `CLAIMS_PROTECTED` for A-to-z Guarantee) when sellers purchase shipping through Amazon. Sellers gain insight into what comes with buying a label through Amazon.
-

June 28, 2024

API changes

- Removed the [June 27, 2024](#) updates to [Fulfillment Outbound API v2020-07-01](#) and

[Merchant](#)
[Fulfillment v0 API.](#)

June 27, 2024

API changes

[Fulfillment Inbound API](#) [v2024-03-20](#)

- The [Fulfillment Inbound API v2024-03-20](#) is now in general availability. You can use this API to select from multiple inbound placement service options and create inbound plans with support for up to 1500 SKUs.
- The [Fulfillment Inbound API v2024-03-20 Use Case Guide](#) provides tutorials on how to create shipments and guidance on the fulfillment inbound shipment workflow.
- The [Fulfillment Inbound API frequently asked questions](#) includes the benefits of the [Fulfillment Inbound API v2024-03-20](#) and guidance on migrating from the Fulfillment Inbound API v0.

- [Migrating Fulfillment Inbound workflows](#) guide you through migrating from the [Fulfillment Inbound API v0](#) to the new [Fulfillment Inbound API v2024-03-20](#).

[Transfers API v2024-06-01](#)

- You can use the new Transfers API to initiate payouts and retrieve instrument details sellers' accounts by calling the `initiatePayout` and `getPaymentMethods` operations. For tutorials on how to use the Transfers API v2024-06-01, sellers can refer to the [Transfers API v2024-06-01 Use Case Guide](#). This API is only available in private beta.

Documentation changes

- The [Finances v0 Use Case Guide](#) outlines how to retrieve financial information, such as the current balance, transactions, and fund transfer

status for your orders using the [Finances API v0](#).

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail beginning on their removal date. For more information about SP-API deprecation dates, refer to the [deprecations table](#).

June 19, 2024

API changes

[Amazon Warehousing and Distribution API v2024-05-09](#)

- Sellers can use the new Amazon Warehousing and Distribution API to track inventory inside AWD distribution centers and track shipments going into AWD distribution centers.

[Data Kiosk API v2023-11-05](#)

- The [Data Kiosk API v2023-11-05](#) is now in general availability.
- The new [Data Kiosk sample solution](#) provides all the resources that you need to

deploy a fully functional SP-API application that automates the creation and retrieval of Data Kiosk documents.

- The new [Data Kiosk workflow guide](#) offers insights into best practices, answers common questions about API usage, and outlines optimal workflows.
- The new [Vendor Analytics dataset](#) provides vendor data across multiple domains. You can aggregate data across any granularity (ASIN/Brand/Manufacturer/date) and access more than 100 metrics across sales, traffic, inventory, forecast, profitability, and new geographic sales metrics.

[FBA Inventory API v1](#)

- Developers who create or manage applications that integrate with the [FBA Inventory API v1](#) and [Fulfillment Outbound API v2020-07-01](#) can use the two dynamic sandbox environments to

test code integrations between the FBA and Fulfillment Outbound API domains. These sandboxes simulate order fulfillment and inventory movements that mimic Amazon's production responses. For more information, refer to the [FBA Inventory Dynamic Sandbox Guide](#).

Fulfillment Outbound API v2020-07-01

- Added the new `deliveryOffers` operation. Sellers can use this operation to display Multi-Channel Fulfillment (MCF) standard delivery offers on pre-checkout pages. This operation is only available in the United States (US) marketplace.
- Added the optional field `lockerDetails` to the `getFulfillmentOrder` response. Sellers can include the information that is needed to access the locker delivery boxes. This

field is only available in the Japan (JP) marketplace.

- Added the optional field `deliveryPreferences` to the `createFulfillmentOrder` request. Sellers can include the delivery preferences that are applied to the destination address. This field is only available in the Japan (JP) marketplace.
- Developers who create or manage applications that integrate with the [FBA Inventory API v1](#) and [Fulfillment Outbound API v2020-07-01](#) can use the two dynamic sandbox environments to test code integrations between the FBA and Fulfillment Outbound API domains. These sandboxes simulate order fulfillment and inventory movements that mimic Amazon's production responses. For more information, refer to the

[Fulfillment](#)
[Outbound](#)
[Dynamic Sandbox](#)
[Guide.](#)

[Product Pricing API](#) [v2022-05-01](#)

- The `getFeaturedOfferExpectedPriceBatch` operation is now available in all marketplaces except Japan (JP). Sellers can use this operation to get the featured offer expected price (FOEP) data for up to 40 SKUs.

[Replenishment API](#) [v2022-11-07](#)

- Added the metrics `LOST_REVENUE_DUE_TO_00S`, `SUBSCRIBER_NON_SUBSCRIBER_AVERAGE_REORDERS`, and `COUPONS_REVENUE_PENETRATION` to the `getSellingPartnerMetrics` operation response. These metrics describe sources of revenue and lost revenue.
- Added the metrics `LOST_REVENUE_DUE_TO_00S` and `COUPONS_REVENUE_PENETRATION` to the `listOfferMetric`

[s](#) operation response. These metrics describe sources of revenue and lost revenue.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail beginning on their removal date. For more information about SP-API deprecation dates, refer to the [Deprecations table](#).

June 4, 2024

API changes

[Fulfillment Inbound API v2024-03-20](#)

- **New feature:** View and select one of the available delivery windows for a shipment to arrive at an Amazon facility
- **New feature:** Print labels for individual items
- Select **Partnered Carrier** as an option for your less-than-truckload (LTL) shipments
- Update the name of inbound plans and shipments
- Update the quantity of units of

a SKU after
shipment
confirmation

- Add three new mandatory operations:
`confirmDeliveryWindowOptions`,
`generateDeliveryWindowOptions`,
and
`listDeliveryWindowOptions`

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail beginning on their removal date. For more information about SP-API deprecation dates, refer to the [Deprecations table](#).

The following operations in [Fulfillment Inbound API v0](#) are no longer deprecated:

- `getShipments`
- `getShipmentItemsByShipmentId`
- `getShipmentItems`

May 22, 2024

API changes

[Product Pricing API v2022-05-01](#)

- Added the `lowestPricedOff`

ers and
referencePrice
s attributes to the
[Product Pricing API
v2022-05-01](#). This
enhancement
provides the top
20 lowest priced
offers and
reference prices.

- In the [Product Pricing API v2022-05-01 Use Case Guide](#), the [Tutorial: Retrieve a list of featured offers for a batch of up to 20 ASINs](#) makes use of two new attributes:
lowestPricedOffers and
referencePrices.
- Added the [Price Adjustment Automation Workflows Guide](#) to our Selling Partner API documentation site. This guide outlines how to leverage the [Product Pricing API v2022-05-01](#) and Pricing notifications to build best-in-class workflows that automate pricing management.
- Added the [Product pricing API and notifications](#)

[frequently asked questions](#) to our Selling Partner API documentation site. This documentation covers common questions and details for the [Product Pricing API v2022-05-01](#).

[Catalog Items API v2022-04-01](#)

- Added a new `includedData` query parameter option called `classifications`, which replaces the deprecated `MWS GetProductCategoriesForSKU` and `GetProductCategoriesForASIN` operations. Sellers and vendors can use `classifications` to browse the classification trees assigned to an ASIN.

[Feeds API v2021-06-30](#)

- The [Order feeds attributes](#) `POST_ORDER_FULFILLMENT_DATA` and `POST_FLAT_FILE_FULFILLMENT_DATA` are updated with a new field: `ship-from-supply-source-id`.

Deprecation notices

Deprecated SP-API resources are no longer in active development. Calls to deprecated SP-API resources will fail beginning on their removal date. For more information about SP-API deprecation dates, refer to the [Deprecations table](#).

April 24, 2024

API changes

[Orders API v0](#)

- Added the the `CompanyName` attribute to the [Orders API v0](#) API.
- Updated the rate limit for the `getOrder`, `getOrderAddresses`, and `getOrderBuyerInfo` operations from .0167 to .5 and increased the burst from 20 to 30.
- Updated the `IsBuyerRequestedCancel`, `IsGift` and `NumberOfItems` object types from Boolean/integer to string.
- Updated the `getOrders` operation to return

the

`AutomatedCarrier`

and

`AutomatedShipMethod`

attributes.

[Easy Ship API v2022-03-23](#)

- Updated the license from the Amazon Software License to the Apache License 2.0.
- Added the 413 HTTP code to each operation's list of possible responses.

Report schema changes

Added The

`lastUpdatedDate`

field to the following

Vendor reports:

- [GET_VENDOR_SALE_S_REPORT](#)
- [GET_VENDOR_NET_PURE_PRODUCT_MARGIN_REPORT](#)
- [GET_VENDOR_TRAFFIC_REPORT](#)
- [GET_VENDOR_FORECASTING_REPORT](#)
- [GET_VENDOR_INVENTORY_REPORT](#)

Vendor Central Marketplace Expansion to Ireland (IE)

On April 23rd, 2024, Vendor Central launched support for Ireland (IE)

Marketplace. For more information, refer to the [SP-API Vendor Central URLs](#), [SP-API Endpoints](#), and [Marketplace IDs](#) topics in the SP-API documentation.

Documentation changes

- The [Orders API v0 Use Case Guide](#) includes new details about order age. Orders more than two years old will not be returned in the API response. The JP, AU, and SG marketplaces are an exception. In those marketplaces the Orders API v0 supports orders from 2016 to present.

Deprecation notices

Deprecated SP-API resources will no longer receive technical support. Calls to deprecated SP-API resources will fail beginning on their removal date. For more detailed information about SP-API deprecation dates, refer to the [Deprecations table](#).

March 20, 2024

API changes

[Shipping API v2](#)

- Added the `AdditionalAddressNotes` , `NdrAction` , `NdrRequestData` , and `SubmitNdrFeedbackRequest` objects to the `ndrFeedback` parameter .
- Added tutorial for [Using the ndrFeedback API to submit Non-Delivery Reports for eligible shipments.](#)

[Merchant Fulfillment API v0](#)

- Added the Dangerous Goods attributes `LiquidVolume` , `IsHazmat` , and `DangerousGoodsDetails` to the `Item` object.

Reports API v2021-06-30

- Updated [Marketplace ASIN Page View Metric](#) report to include support for the UK. For more information about this report, refer to [Regulatory Compliance Report Type Values](#). This change applies to the UK marketplace only.
- Published new [Request and retrieve a bulk invoice report for Multi-Channel Fulfillment \(MCF\) orders for India](#) tutorial to the [Request a report tutorial](#) page. The bulk invoice report lets MCF Sellers download the Goods and Service Tax invoice associated with their MCF order in a batch/zip format. Sellers can pass a date range to generate the download request and receive a zip file with delivered MCF order invoices.

Notifications API v1

- Updated [FEED_PROCESSING](#) [FINISHED](#) and

REPORT PROCESSI

NG FINISHED to include support for vendors. Both notifications include a new `accountId` property, which identifies the selling partner on whose behalf the feed or report was submitted. This change applies to all marketplaces.

Fulfillment Outbound v2020-07-01

- Added the `PaymentInformation` attribute, which is required for India but is optional for all other marketplaces.
- Added tutorial on how to create an MCF order for India in the [Fulfillment Outbound API v2020-07-01 Use Case Guide](#).

Documentation changes

- Added Python and Javascript client libraries for SDKs in the SP-API. To learn more about SP-API SDKs, refer to [Using SDKs, Tutorial: Automate your SP-API calls using JavaScript](#)

[SDK for Node.js](#),
and [Tutorial:](#)
[Automate your SP-](#)
[API calls using](#)
[Python SDK](#).

- Reformatted the Report Type Values pages and consolidated the report type attributes for optimized discoverability.

API changes

Reports API v2021-06-30

- Added new Report Type Value [EndUserDataReport](#) provides personal customer data, including contact information, Glance View, and Orderdata for customers who have elected to share this data with the seller when completing a transaction in DE, FR, IT, ES, NL, PL, SE and BE (EU-8) marketplaces.

Application Management API

- Promoted the Application Management API v2023-11-30 from Public Beta to Production. This API lets you programmatically rotate your Login with Amazon

Documentation updates

- Added six new code tutorials that detail how to do various tasks such as previewing orders, creating orders, and canceling orders. Find them in the [Code Samples](#) section.

Deprecation notices

API changes

[Listings Items API v2021-08-01](#)

- Added a new validation mode for the `putListingsItem` and `patchListingsItem` operations. Use the `mode=VALIDATION_PREVIEW` query parameter to validate a listings item without persisting the data in the catalog. This feature allows you to preview listing errors in production without creating listings.

[Fulfillment Inbound API v0](#)

- Added the `ShipsInProductPackaging` value to the `PrepInstruction` enum. `PrepInstructionList` is returned in the response for calls to

`prepInstruction`
`s` .

Orders API v0

- Added `ExtendedFields` and `AddressExtendedFields` objects. These objects are only available for Brazil addresses and are returned in responses for a Brazil shipping addresses that contain extended fields.

Deprecation notices

SP-API resources announcing deprecation will no longer be supported after their deprecation date. Calls to deprecated resources will fail beginning on their removal date. For more detailed information about SP-API deprecation dates, refer to the [Deprecations table](#).

December 13, 2023

API changes

Application Management API v2023-11-30 Public Beta

- New Application Management API lets you programmatically rotate your Login with Amazon (LWA) credentials (client secrets). Available in public beta.

Shipping API v2

- Launched support for dangerous goods (DG) shipping in the US and UK markets.

Listings Items API v2021-08-01

- India (IN) is now a supported marketplace
- Two new fields added to the

Issue object:
Enforcements
and Categories

[Product Type Definitions API v2020-09-01](#)

- `searchDefinitionsProductTypes`
operation type
updated to string

[Notifications API v1](#)

- Added an optional `payloadVersion` parameter
- New [Listings Item Issues Change Notification version 2023-12-13](#) has three new enforcement actions:
`LISTING_SUPPRESSED` ,
`ATTRIBUTE_SUPPRESSED` , and
`CATALOG_ITEM_REMOVED`

Documentation updates

[Vendor Direct Fulfillment Orders API v1 Use Case Guide](#) was updated to include a section on [Direct Fulfillment customer data transmission](#).

Vendors do not receive customer data such as name, address, or phone number for certain shipments fulfilled through the `getOrder` and `getOrders`

operations. For Amazon label only vendors, certain fields will be replaced with the fictitious value `XXXXX`.

The [Vendor Retail Procurement APIs v1 Use Case Guide](#) has been updated to include information on using the Operations [SubmitShipments](#) and [GetShipmentDetails](#).

[GET_FBA_FULFILLMENT_LONGTERM_STORAGE_FEE_CHARGES_DATA](#) now includes updated column names. A note has been added to the FBA Long Term Storage Fee Charges Report on the [Fulfillment by Amazon \(FBA\) Report Type Values](#) page, outlining the correct way to generate the report.

The Fulfillment by Amazon (FBA) bulk invoice report (`FBA_BULK_INVOICE`) shares the invoices for a seller within the given date range. These invoices include customer orders served by the seller.

Deprecation notices

API changes

[Supply Sources API](#) [v2020-07-01](#)

- New Supply Sources API configures and updates information on seller supply sources, such as stores and warehouses.

[Product Pricing API](#) [v2022-05-01](#)

- The United Kingdom is now a valid marketplace.
- `getFeaturedOfferExpectedPriceBatch` (FOEP) has been extended to [Amazon.co.uk](https://www.amazon.co.uk).
- `ASIN_NOT_ELIGIBLE` is now a value for `resultStatus`.
- The new `competitiveSummary` operation returns the competitive

summary response including featured buying options for the ASIN and `marketplaceId` combination.

[Product Type Definitions API v2020-09-01](#)

- Updated for three new parameters (`itemName` , `locale` , and `searchlocale`) and one new `displayName` product type.

[Finances API v0](#)

- Updated `ListFinancialEvent` and `ListFinancialEventGroups` operations more clearly communicate expected responses and scope. The response for `ChangeRefundTransactions` was modified from an object to an array.

[Vendor Direct Fulfillment Shipping API v2021-12-28 and v1](#)

- Updated `weight` field is now mandatory. This change will generate an error when invoking `shipmentconfirmations` so that

vendors do not have to wait for an error during transaction status.

Documentation updates

- New [Multi-Location Inventory \(MLI\) Integration guide](#) advises Selling Partners on the APIs and operations that are mandatory for integration with MLI , which allows multi location sellers to provide Amazon with location-level data on their inventory and actual fulfillment capabilities.
- Updated Building Listings Management Workflows Guide now includes steps to retrieve a recommendation using the `itemName` or `keywords` in the [List an item that does not already exist in the Amazon catalog](#) workflow.

[Orders API v0](#)

- The `ShipmentService`
`LevelCategory` property of the order definition has been updated to include the value `Priority`. This value is available from the new shipping template available in the France, Spain, Germany, Poland, Netherlands, Sweden, and Belgium marketplaces to support seller-fulfilled Prime orders. If your integration uses the new shipping templates for these regions, you might need to update your integration to accept the `Priority` value for

ShipmentService
LevelCategory .

Catalog Items API v2022-04-01

- The `generic_keyword` attribute is proprietary seller-specific data and will no longer be returned by the Catalog Items API. Selling Partners can use the Listings Items API to view submitted values.

Documentation updates

- The SP-API developer documentation site recently published a new [Welcome](#) topic. This topic provides resources for migrating to and integrating with SP-API, tips for searching the documentation site, and quick links to popular SP-API content.
- The SP-API developer documentation site has been updated to include new and improved developer registration topics including how to [Register as a public](#)

[developer](#), how to [Register as a private developer](#), how to [Register as a private vendor](#), how to [Apply for restricted \(PII\) roles](#), and how to [Check the status of your request to register as a developer](#).

Deprecation notices

We have adjusted the removal date for the following APIs:

- [Feeds API v2020-09-04](#)
- [Reports API v2020-09-04](#)

Calls to these APIs will have a lower throttle rate from **Aug 16, 2023** through **October 18, 2023**. Calls to these APIs will fail on **October 18, 2023**.

For more detailed information about SP-API deprecation dates, refer to the [Deprecations table](#).

June 21, 2023

API changes

Replenishment API

- New [Replenishment API v2022-11-07](#) returns a selling partner's replenishment

program
(Subscribe & Save)
metrics and offer
information. This
API is available in
the following
marketplaces:
United States of
America, Canada,
Brazil, Mexico,
United Kingdom,
Germany, Spain,
Italy, France,
Netherlands,
United Arab
Emirates, India,
Japan, and
Australia.

Reports API

- New
[MARKETPLACE ASIN_PAGE_VIEW_METRICS](#)
[ICS](#) report
provides
information on the
ASIN page view
(glance view)
metrics for the DE,
FR, IT, ES, NL, PL,
SE and BE (EU-8)
marketplaces, with
data available up
to the last seven
days.

Rapid Retail Analytics

- New
[GET_VENDOR_REALTIME_SALES_REPO](#)
[RT](#) shares sales
data at an ASIN
level, aggregated
hourly. Requests
can span multiple
date range periods.

- New
[GET_VENDOR_REALTIME_TRAFFIC_REPORT](#) shares data on the customer traffic to the detail pages of the vendor's items, aggregated hourly. Requests can span multiple date range periods.
- New
[GET_VENDOR_REALTIME_INVENTORY_REPORT](#) shares inventory data at an ASIN level, aggregated hourly.

Listings Items API

- [Listings Items API](#) now available in the Belgium (BE) marketplace.

Notifications API

- New
[LISTINGS_ITEM_MODIFIED_NOTIFICATION](#) notification is sent whenever there is change in the available quantity of a listings item.
- New
[ORDER_CHANGE](#) notification is sent whenever there is an important change in the order. Important changes include order status changes and buyer

requested
cancellations. This
notification
replaces
`ORDER_STATUS_CHANGE`.

- The `B2B_ANY_OFFER_CHANGED` notification has been updated to include the Quantity Discount (QD) pricing in the `Offer` section, with new attributes including multiple quantity tiers, discount type, and price. You can now use this notification to build QD re-pricing solutions, which eliminates the need to use pricing APIs for this purpose.

Rapid Retail Analytics

- New `ITEM_SALES_EVENT_CHANGE` notification is sent five minutes after the beginning of each hour. This notification shares sales data at an ASIN level and includes data for the previous hour, as well as any delayed data from up to 24 hours

earlier. ASINs are included when they have orders or cancellations during a given hour. Each notification can include multiple ASINs, and a selling partner can expect to receive multiple notifications every hour.

- New

- ITEM_INVENTORY

- EVENT_CHANGE

notification is sent five minutes after the beginning of each hour. This notification shares inventory data at an ASIN level, and includes data for the previous hour, as well as any delayed data from up to 24 hours earlier. ASINs are included if the number of units available for purchase by customers has changed. Each notification can include multiple ASINs, and a selling partner can expect to receive multiple notifications every hour.

- New

- DETAIL_PAGE_TRA

FFIC_EVENT

notification is sent five minutes after the beginning of each hour. This notification shares traffic data at an ASIN level and includes data for the hour before the previous hour, as well as any delayed data from up to 24 hours earlier. ASINs that have glance views are included. Each notification can include multiple ASINs, and a selling partner can expect to receive multiple notifications every hour.

Documentation updates

- New [Migrating Listings Management Workflows guide](#) helps you migrate your existing listings management workflows from XML-based and flat file feeds to the Selling Partner Listings Items API and JSON-based feeds.
- Updated reports schemas repo includes

[GET_B2B_PRODUCT](#)
[OPPORTUNITIES_R](#)
[ECOMMENDEED_FOR_Y](#)
[OU](#) and
[GET_B2B_PRODUCT](#)
[OPPORTUNITIES_N](#)
[OT_YET_ON_AMAZO](#)
[N](#)

Deprecation notices

SP-API resources announcing deprecation will no longer be supported after their deprecation date. Calls to deprecated resources will fail beginning on their removal date

- [ORDER_STATUS_CHANGE](#)
- [MFN_ORDER_STATU](#)
[S_CHANGE](#)
- [Feeds API v2020-09-04](#)
- [Reports API v2020-09-04](#)

For more detailed information about SP-API deprecation dates, refer to the [Deprecations table](#).

May 17, 2023

API changes

[Vendor Direct Fulfillment Shipping v2021-12-28](#)

- Updated the dynamic sandbox to include the [createShippingLabels](#) operation.

Orders V0

- Remove the Generic Orders Approvals workflow.
Removed `ItemApprovalTypes` and `ItemApprovalStatus` attributes.

Documentation updates

- New [Reports attributes directory](#) lists all the available attributes in SP-API reports.
- New [Vendor Retail Procurement FAQ](#) includes frequently asked questions regarding the SP-API Vendor Retail Procurement API.

Deprecation notices

- [Feeds API v2020-09-04](#)
- [Reports API v2020-09-04](#)
- [POST FLAT FILE FBA_CREATE_INBOUND_PLAN](#)
- [POST FLAT FILE FBA_UPDATE_INBOUND_PLAN](#)

April 19, 2023

API changes

[Fulfillment Outbound API](#)

- Updated the `city` property in the `address` attribute from **required** to **optional**.

[Fulfillment By Amazon \(FBA\) Inventory API](#)

- Updated the `sellerSku` field to include and parse commas.

Documentation updates

[Product Type Definition Meta Schema](#)

- The Amazon Product Type Definition Meta-Schema (v1) has been updated to include the following keywords:
`$lifecycle` ,
`replacedBy` ,
`replaces` ,
`enumDeprecated` ,
and
`enumReplacement` .

C# guide updates

- Added two new C# guides: [Generate a C# SDK with LWA Token Generation and Authentication](#) and [Connect to the Selling Partner API using a generated C# SDK](#).

Deprecation notices

- [Feeds API v2020-09-04](#)

-

March 29, 2023

API changes

[Fulfillment By Amazon \(FBA\) Inventory API](#)

- Update `nextToken` to expire after 30 seconds.

[Orders API](#)

- Added `confirmShipment` operation.

[Fulfillment Outbound API](#)

- Updated `address` attribute to include city.
- Updated to employ a dynamic sandbox for testing instead of a static sandbox. Includes one new sandbox-only operation.

Documentation updates

- New [Orders API Use Case Guide](#) for the Orders v0 shipment confirmation operation. The `confirmShipment` operation confirms the shipment status

for a specified order. It can also be used to edit shipment details of orders that have been shipped. include link to guide (when available)

- New use case guide
 - [Fulfillment Outbound API Dynamic Sandbox v2020-07-01](#) explains how test your applications without affecting production data or initiating real-world events.
- Expanded library of reports schemas available on [selling-partner-api-models](#) GitHub repo
- Three new Listings Items API resources to address common questions:
 - [Listings Items API FAQ](#)
 - [Listings Items API issues troubleshooting](#)
 - [Guidance for complex attributes](#)

Deprecation notices

- [Feeds API v2020-09-04](#)

- [Reports API v2020-09-04](#)

February 22, 2023

API changes

[Merchant Fulfillment API](#)

- Updated static sandbox mock responses to display names of select UPS domestic (US) ship methods on SP-API.

[Orders V0 API](#)

- Added the following delivery preferences attributes to `getOrderAddress` to support Amazon Business customer orders:
 - `PreferredDeliveryTime`
 - `BusinessHours`
 - `OtherAttributes`
 - `AddressInstructions`

These attributes contain information about how and when a package is delivered.

[Vendor Direct Fulfillment Orders API](#)

- The `customizedUrl`

attribute of
buyerCustomized
Info , returned by
the [getOrder](#) and
[getOrders](#)
operations, is now
a Base 64 encoded
URL using the UTF-
8 character set.

Vendor Retail Procurement Orders API

- Updated to pass
six-month-past-
in-date as a
query parameter.

Documentation updates

- New [Amazon
Business Orders
Use Case Guide](#)
introduces
operations to
obtain information
about Amazon
Business customers
and their delivery
preferences.
- New [Sales API Use
Case Guide](#)
provides sellers
with sales
performance
information. This is
achieved through
returning
aggregated order
metrics for a given
period of time,
broken down by
granularity, and
buyer type.
- New [FBA Small &
Light Use Case
Guide](#) introduces

operations to help access the Small and Light FBA program.

Deprecation notices

- [Feeds API v2020-09-04](#)
- [Reports API v2020-09-04](#)

January 25, 2023

API changes

[Product Pricing API](#)

- New `getFeaturedOfferExpectedPriceBatch` operation retrieves responses to a batch of up to 40 featured offer expected price (FOEP) requests.

[Vendor Direct Fulfillment Orders API](#)

- New `buyerCustomizedInfo` attribute, containing buyer information for products the vendor has configured as customizable, specifying the types of customization or configurations along with types and ranges for their product.

Orders API

- New `serialNumber` attribute returns a list of serial numbers for electronic products that are shipped to customers. Returned for FBA orders only.

Finances API

- New financial event type: `CapacityReservationBillingEventList` allows you to retrieve details related to a Capacity Reservation Billing charge.

Documentation updates

- New use case directories identify the APIs, notifications, and reports that you'll need for general SP-API [Seller](#) and [Vendor](#) use cases. Additionally, the [SP-API models table](#) indicates whether each API is available for sellers or vendors and includes links to each model's reference and any relevant release notes.

- New [Vendor Direct Fulfillment Orders API v2021-23-28 use case guide](#) covers the Vendor DF Orders API, which provides programmatic access to a direct fulfillment vendor's order data.
- New [Vendor Direct Fulfillment Transaction Status API v2021-12-28 use case guide](#) covers the Vendor DF Transaction Status API, which provides programmatic access to a direct fulfillment vendor's transaction status.
- Updated dynamic usage plans topic for the [Usage Plans and Rate Limits in the SP-API Guide](#) includes the Product Pricing API and `getFeaturedOfferExpectedPriceBatch` operation.

Deprecation notices

December 6, 2022

API changes

[Catalog Items API](#)

The Catalog Items v2022-04-01 API has been updated to include several additional attributes in the summary to bring the Catalog Items API to parity with the Marketplace Web Services Catalog Items section:

- `ItemContributor`
- `ItemContributorRole`

In addition, the following attributes have been added to `ItemSummaryByMarketplace` :

- `adultProduct`
 - `autographed`
 - `memorabilia`
 - `releaseDate`
 - `tradeInEligible`
-

November 9, 2022

API changes

[Reports API](#)

- New GST Merchant Tax Report B2B
[GET_GST_MTR_B2B_CUSTOM](#) provides detailed information about sales, refunds, and cancellations from Amazon Business invoices issued within a date range that you specify. Only available in the India Marketplace.
- New GST Merchant Tax Report B2C
[GET_GST_MTR_B2C_CUSTOM](#) provides detailed information about sales, refunds, and cancellations from consumer invoices issued within a date range that you specify. Only available in the India Marketplace.
- New GST Merchant Stock Transfer Report
[GET_GST_STR_ADHOC](#) provides details on inventory movements from Amazon fulfillment centers (FC) (FC removals or FC-to-FC transfers). The report contains transaction level details required for accounting and GST tax filing. Only

available in the
India Marketplace.

Documentation updates

- New [Building Listings Management Workflows Guide](#) describes the steps you can take to build best-in-class listings creation and management workflows by integrating with the Selling Partner API.

October 19, 2022

API changes

[Notifications API](#)

Updated for new [FBA_INVENTORY_AVAILABILITY_CHANGES](#) notification that is sent whenever there is a change in the Fulfillment By Amazon (FBA) inventory quantities. This notification includes a snapshot of the FBA inventory in all eligible marketplaces in a particular region.

[Reports API](#)

- Updated [GET_SALES_AND_TRAFFIC_REPORT](#) , which now includes B2B traffic data regarding traffic

originating from Amazon Business customers. As of 08/28/2022 B2B conversion metrics have changed to use the new B2B traffic data. Data before 08/28/2022 is set to zero to avoid confusion.

- New Subscribe and Save Forecasting report

[GET_FBA_SNS_FOR_ECAST_DATA](#)

provides an eight-week forecast of sales based on existing subscriptions and sales history.

- New Subscribe and Save Performance report

[GET_FBA_SNS_PERFORMANCE_DATA](#)

provides a trailing four-week view of items shipped, percentage of orders missed due to being out of stock, average post-discount sale price, and average discount for each SKU.

Documentation updates

- New [Selling Partner API Guard Implementation](#)

[Guide](#) describes architectural considerations and configuration steps for deploying Amazon Selling Partner Guard in AWS Cloud.

September 21, 2022

API changes

[Vendor Direct Fulfillment Shipping API v2021-12-28](#)

- Updated for new [createShippingLabels](#) synchronous operation that creates shipping labels for a purchase order and returns the labels. Note that the `createShippingLabels` operation does not have any sandbox support at this time.
- Updated for production and dynamic sandbox support for all of the equivalent Vendor Direct Fulfillment Shipping V1 operations.

[Tokens API v2021-03-01](#)

- Updated for the following restricted operations to support Vendor

Direct Fulfillment

Shipping API

v2021-12-28:

- `createShippingLabels`
- `getPackingSlip`
- `getCustomerInvoice`
- `getShippingLabel`

Reports API v2021-06-30

- Updated [Inventory Ledger Report](#) (`GET_LEDGER_DETAIL_VIEW_DATA`) now includes a new `eventType` filter to filter on particular warehouse events.

Documentation updates

- New [VAT Calculation Service Guide](#) provides developers in EU marketplaces with guidance for Amazon's VAT Calculation Service.
- New [Solicitations API v1 Use Case Guide](#) covers the Selling Partner API for Solicitations (Solicitations API) which helps you build applications that let sellers send consistent, high-quality

solicitations to buyers.

- New [Messaging API v1 Use Case Guide](#) discusses the Messaging API.
 - New [URL encoding](#) guide explains how to encode URLs to avoid errors with SKUs.
 - Updated [Vendor Direct Fulfillment Dynamic Sandbox Guide](#) includes support for Vendor Direct Fulfillment Shipping v2021-12-28 operations. Note that the `createShippingLabels` operation does not have any sandbox support at this time.
-

August 10, 2022

API changes

[Orders V0 API](#)

- Improvements to the Orders API in support of Easy Ship shipments.

[Services V1 API](#)

- Updated for new `getRangeSlotCapacity` operation that provides capacity slots in a format similar to availability records.

- Updated for new `getFixedSlotCapacity` operation that provides fixed capacity slots.

May 18, 2022

API changes

[Catalog Items API](#)

- New Catalog Items API version 2022-04-01 improves the API experience and addresses developer feedback with the following changes:
 - Added identifier-based searches to the `searchCatalogItems` operation, enabling batch-like requests with up to 20 identifiers per request (such as ASINs, UPCs, and EANs)
 - Added `dimensions` data set, providing normalized item and package dimensions
 - Added display names for product

category,
product
subcategory,
and browse
classification

- Expanded identifying attributes to item summaries (item classification, package quantity, part number, website display group)
- Added browse classifications and website display groups to sales ranks
- Aligned `searchCatalogItems` and `getCatalogItem` operations to use the same data sets, including `attributes`
- Replaced `variations` with `relationships` to allow for multiple relationship types to be represented, such as package hierarchies

- Added variation theme details (name to the relationships details)

Notifications API

- Added a `processingDirective` parameter that lets you pass additional information to the subscription to control the processing of notifications. This parameter is used by the `ANY_OFFER_CHANGED` notification.
- Updated the `ANY_OFFER_CHANGED` notification to support filtering notifications to only specific `marketplaceIds`, and limiting notifications to one every five or ten minute interval.

Orders API

- Updated to include support for the Purchase Shield program that manages regulated orders in the UK. Regulated orders are a limited set of orders that fulfill products requiring

a prescription (pet medication, prescription contacts, and prescription glasses). Two new operations have been added:

`getOrderRegulatedInfo` and `updateVerificationStatus`.

- New `IsAccessPointOrder` attribute to support identifying MFN (fulfilled by seller) orders that have been shipped to access point (AP) hubs.

[Product Fees API](#)

- Updated for new `getMyFeesEstimates` operation that retrieves product fee estimates for a list of products and marketplaces.

[Product Pricing API](#)

- Updated for new `getItemOffersBatch` and `getListingOffersBatch` operations that retrieve product pricing and offer information in a list for products.

[Reports API](#)

- New [EPR Monthly Report, EPR](#)

[Quarterly Report, and EPR Annual](#)

[Reports](#) report types include data on the Extended Producer Responsibility (EPR) declarations for service providers in France and Germany to help sellers maintain compliance with EU regulations.

April 13, 2022

API changes

[Easy Ship API](#)

- New [Easy Ship API](#) helps you build applications that help sellers manage and ship Amazon Easy Ship orders.

[FBA Inventory API](#)

- Updated FBA Inventory API for global availability and released new FBA Inventory Use Case Guide.

[Notifications API](#)

- New [PRICING_HEALTH](#) notification is sent whenever a seller offer is ineligible to be the Featured Offer (Buy Box offer) because of

an uncompetitive price.

- New [FulfillmentChannel](#) property in the [ORDER_STATUS_CHANGE](#) notification that allows you to filter order status change notifications based on whether the order is fulfilled by Amazon (AFN) or fulfilled by seller (MFN).

Vendor Direct Fulfillment APIs

- New [Vendor Direct Fulfillment Orders API v2021-12-28](#) provides programmatic access to a direct fulfillment vendor's order data. This v2021-12-28 release adds support for dynamic sandbox testing.
- New [Vendor Direct Fulfillment Sandbox Test Data API v2021-10-28](#) provides programmatic access to vendor direct fulfillment sandbox test data.
- New [Vendor Direct Fulfillment Shipping API v2021-12-28](#)

reference provides programmatic access to a direct fulfillment vendor's shipping data. This v2021-12-28 release adds support for dynamic sandbox testing.

- New [Vendor Direct Fulfillment Transactions API v2021-12-28](#) provides programmatic access to a direct fulfillment vendor's transaction status. This v2021-12-28 release adds support for dynamic sandbox testing.

Documentation updates

- New [Vendor Direct Fulfillment Dynamic Sandbox Guide](#) introduces the available dynamic sandbox operations for the Vendor Direct Fulfillment APIs.
- New [Vendor Retail Analytics Reports Migration Guide](#) that explains changes to the vendor retail analytics reports and provides steps for migration.

March 23, 2022

API changes

[Orders API](#)

- New `buyerRequestedCancellation` parameter provides information on whether a buyer requested order cancellation and reason for cancellation.

[Reports API](#)

New [Seller retail analytics reports](#)

- New **Sales and Traffic Business Report** helps you manage your analytics better by providing key sales performance metrics such as ordered product sales, revenue, units ordered, and claim amount, as well as page traffic metrics such as page views and buy box percentage of the seller's entire catalog of items aggregated by date and ASIN. This report requires the Brand Analytics Selling Partner API role which is now

available to all sellers.

New [Performance reports](#)

- New **Coupons Performance Report** helps you optimize your promotions and adjust your advertising strategies. The report includes campaign-level details (total clips, redemptions) and coupon-level details (start/end date, clips, redemptions, and budget information). Available to vendors who have the Brand Analytics Selling Partner API role.

New [Vendor retail analytics reports](#)

- New **Vendor Sales Report** helps you manage your inventory better by providing key retail sales metrics such as ordered/shipped revenue and units. Data is reported at the aggregate level across a vendor's catalog of items and at the ASIN level across DAY , WEEK , MONTH ,

QUARTER , and
YEAR reporting
periods. Available
to vendors who
have the Brand
Analytics Selling
Partner API role.

- **New Vendor Traffic Report**
helps you manage
your inventory
better by providing
key retail traffic
metrics such as
detail page views.
Data is reported at
the aggregate level
across a vendor's
catalog of items
and at the ASIN
level across DAY ,
WEEK , MONTH ,
QUARTER , and
YEAR reporting
periods. Available
to vendors who
have the Brand
Analytics Selling
Partner API role.
- **New Vendor Forecasting Report** helps you
manage your
inventory better by
providing forward
looking mean, P70,
P80, and P90
weekly customer
demand forecasts.
The forecasting
system produces
forecasts for an
ASIN at various P-
levels, also known
as confidence
levels. If you are

setting a forecasting P-level of .80 ("P80"), it means that there is an 80% probability customer demand will not exceed the weekly forecasted units. Data is reported at the ASIN level for the most recent weekly forecast generation date. Available to vendors who have the Brand Analytics Selling Partner API role.

- **New Vendor Inventory Health Report 2.0** helps you manage your inventory better by providing inventory and operational health metrics such as sellable on hand units and vendor confirmation rate. Data is reported at the aggregate level across a vendor's catalog of items and at the ASIN level across week, month, quarter, and year reporting periods. Available to vendors who have the Brand Analytics Selling Partner API role.

Documentation update for [Invoice data reports](#)

- **Flat File VAT Invoice Data Report and XML VAT Invoice Data Report** are now available in documentation. These reports are for sellers enrolled in Amazon's VAT Calculation Service and who opt to upload their own invoices.

Documentation updates

- New Migration Hub page aggregates all Amazon MWS to Selling Partner API migration-related timelines, planned deprecation dates, and resources into a single reference page.
- New Selling Partner API Blog site includes articles from Amazon Solutions Architects and API experts covering a range of topics including customer stories, migration, best practices, tips and tricks, and much more.

January 19, 2022

API changes

[Fulfillment Inbound](#)

- New error code `PRODUCTASSURANCE_SAFETYDOCUMENTATION` returned for non-compliant products that do not have safety compliance documentation. This error code is returned for the following operations:
 - `CreateInboundShipmentPlan`
 - `CreateInboundShipment`
 - `UpdateInboundShipment`
 - `PreviewItemEligibility`

Read more about this change on [Seller Central](#).

[Orders API](#)

- New `buyerTaxInformation` attribute for the Turkey Marketplace. This attribute includes business tax information when the buyer is a business.

[Notifications API](#)

- New **Order Status Change** notification is sent

whenever there is a change in the status of order availability.

[Reports API](#)

- New **FBA Manage Inventory Health Report** helps you manage your inventory better by providing a consolidated view across your sales (7, 30, 60, and 90 days), shipment statuses (working, received, and shipped), estimated storage and long-term storage fees, and aged and excess units. This report includes metrics across sales, inbound, estimated fees, and recommended actions.
- New **On Demand Stock Transfer Report** that provides transaction level information like invoice value, invoice number, tax rate, and Goods and Services Tax Identification Numbers (GSTINs) for interstate movement transactions.

Documentation updates

[Amazon MWS to Selling Partner API Migration Guide](#)

- Updated documentation with additional migration guidance and resources, including the [Selling Partner API \(SP-API\) Video Series on YouTube](#) for step-by-step migration assistance and the [Selling Partner API on AWS Quick Start](#) for configuring IAM resources and deploying SP-API on the AWS Cloud.
