What is the Selling Partner API?

Selling Partner API Onboarding Overview

SP-API Security and Compliance Overview

Learn how to implement essential security controls for SP-API applications to meet Amazon's Data Protection Policy requirements and maintain secure access to seller data.

As a Selling Partner API (SP-API) developer, you must ensure that your application meets Amazon's [Data Protection Policy \(DPP\) requirements](#), passes mandatory data security assessments, and maintains secure access to SP-API services. These security frameworks protect your application from common threats like credential theft, data breaches, and malware attacks. They also establish the foundation for handling sensitive seller data responsibly.

Without these controls, your application risks

failing Amazon's compliance audits, losing API access privileges, and exposing your organization to security vulnerabilities. These vulnerabilities can compromise both your systems and the seller data that you protect.

Security requirements for all SP-API developers

To protect seller data and maintain API access, implement the following essential security controls:

- [Safeguarding Sensitive Credentials](#): To prevent credential theft and unauthorized access, don't hardcode credentials. Make sure to store credentials securely. Search your code for hardcoded keys, passwords, and tokens.
- [Network Protection Guidance](#): To block external attacks and malware, make sure to implement firewalls, anti-malware, and
