Search for listings items by product identifier or other listings parameters

Learn how to retrieve information about multiple listings based on SKU, ASIN, or supported product identifiers.

Learn how to retrieve information about multiple listings based on SKU, ASIN, or supported product identifiers. Responses can include a number of optional datasets that provide important information about the state of a listing.

! Warning

SP-API cannot distinguish encoded commas (`%2C`) from literal commas (`,`).

Learn How Sellers Authorize Service Providers

This means that you can't include SKUs that contain commas within comma-delimited queries, because commas in SKUs cannot be distinguished from commas that separate arguments.

When a SKU contains a comma, you must search for the SKU individually. For more information, refer to [How do I encode a URL?](#)

Even though there can be more than 1,000 SKUs that match the search criteria, the maximum number of results that can be returned and paged through is limited to 1,000. For example, if you set the `pageSize` to 10, the maximum number of possible pages is 100.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. Refer to [Authorizing Selling](#)

[Selling Partner API Roles](#)[Partner API](#)

Applications for more information.

[Policies and Agreements](#)[About Facial Data](#)

AUTHORIZATION

[Authorize Applications](#)

- Approval for the Product Listing role in your developer profile.
- The Product Listing role selected in the App registration page for your application.

[Renew Authorizations](#)[Revoke Authorizations](#)[Authorization Limits](#)[Special Authorization Types](#)

INTEGRATION

Submit a listings item search request

To return details for multiple listings items, call the `searchListingsItem` operation.

Note

If you use `packageHierarchySku` with a family size that exceeds 20 SKUs, only the first 20 SKUs are returned in the response.

You can use `sortBy` and `sortOrder` to sort your results.

Include any `IncludedData` values that you want in your response.

		Value	Description
Delete an Application From Your Developer Account		summaries	Summary details of the listing item
CALLING THE SP-API			
Configuration Details	>	attributes	A JSON object containing structured listing item attribute data keyed by attribute name
