Selling Partner API Roles

Learn how to use roles in the Selling Partner API.

Roles are the mechanism by which the Selling Partner API (SP-API) determines whether a developer or application has access to an operation or resource. Roles protect access to personally identifiable information (PII) and other sensitive data, and ensure that developers only access data that their application requires.

As a developer, you must request and qualify for a particular role to gain access to the operations and resources that the role provides. If you call an operation for which you don't have the required roles, you get a 403 error.

Choose your roles

Selling Partner API Roles >

Role Mappings for SP-API Operations

Role Mappings for SP-API Types

Use the following topics to identify which role you need for each SP-API operation and type:

- [Role Mappings for Operations](#)
- [Role Mappings for Types](#)

After you know which roles you need, you request them through your developer profile. Amazon evaluates the information you submit and approves or denies your request. If denied, you can address the reason for the denial and then resubmit your profile.

Add your approved roles to your application

When you [register your SP-API application](#), you can choose roles from among those that you were approved for in your developer profile. If the role that you need is missing, you must update the roles in your developer profile to include the new role, and then resubmit your profile for evaluation by Amazon. If you are approved, the added role will be available to select for your application.

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

Special Authorization Types >

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs >

Note

If you published a hybrid SP-API application, you must relist your application before reauthorization.

To add a new role:

1. Go to your developer profile and submit the role that you want to add.
2. After your [developer profile is approved](#), go to your application configuration and [apply the newly approved role](#) to your application. Save the changes and re-list the application.
3. After the application is approved, [get new authorizations](#) to generate a new refresh token that grants access to the API operations, reports, feeds, and notifications that the new role provides.

Role definitions

In the following sections, *Restricted* means that the role requires sensitive information, which might include personally identifiable information (PII). For these roles, you must provide additional information about your data use and security controls.

Account Information Service Provider

The Account Information Service Provider (AISP) role provides access to information about the Amazon Selling Partner account, including information about the seller's business and the marketplaces where the seller account is active. You can use this role to view payment methods and financial events for the seller.

- **Role available to sellers?** Yes
- **Role available to vendors?** No

► Select for examples of operations that require this role.

SECURITY AND COMPLIANCE

SP-API Security and Compliance Overview

Amazon Selling Partner API Guard Implementation Guide 

Amazon Fulfillment

The Amazon Fulfillment role provides access to Amazon fulfillment operations and shipping services such as Fulfillment by Amazon (FBA) and Amazon Fulfillment Network (AFN). You generally use this role for FBA sales reports, order tracking reports, and operations related to order fulfillment.

- **Role available to sellers?** Yes
- **Role available to vendors?** Yes

► [Select for examples of operations that require this role.](#)

Amazon Warehousing and Distribution

The Amazon Warehousing and Distribution (AWD) role provides access to AWD shipment and inventory operations. You generally use this role when you use the [Amazon Warehousing and Distribution API](#) to interact with AWD inventory information and shipment details.

- **Role available to sellers?** Yes
- **Role available to vendors?** Yes

► [Select for examples of operations that require this role.](#)

Brand Analytics

The Brand Analytics role provides access to marketplace analytics reports, such as seller and vendor performance metrics and consumer behavior insights that show how customers discover and purchase products on Amazon.

- **Role available to sellers?** Yes
- **Role available to vendors?** Yes

► [Select for examples of operations that require this role.](#)

Buyer Communication

The Buyer Communication role provides access to operations that manage messaging to and from Amazon buyers. You generally use this role when you

Inventory and Order Tracking

The Inventory and Order Tracking role provides access to operations that analyze and manage inventory. You generally use this role to get FBA sales reports, order tracking reports, and operations related to orders, vendor orders, sales order metrics, and inventory management. Operations that require this role do not use PII required to ship an order. Rather, this role is for applications that track shipments.

- **Role available to sellers?** Yes
- **Role available to vendors?** No

► [Select for examples of operations that require this role.](#)

Notifications in Seller Central

The Notifications in Seller Central role provides access to operations that send targeted notifications to sellers within Seller Central. For example, you can use the [App Integrations API](#) to send notifications that
