Services API

Learn how to use the Services API.

You use the [Services API](#) to get and modify service orders and manage your resources. You can

- Access service job details.
- Confirm or reschedule appointments.
- Set appointment resource assignments.
- Set job fulfillment data.
- Set resource capacity schedules that drive appointment availability for customers.
- Integrate services data for route and fulfillment planning.

After fulfillment, service Sellers can audit resource (for example, technician) performance by tracking on-time start, service job completion within appointment windows, no-shows, and fulfillment breaks.

Post fulfillment, the Services API can measure seller and resource performance, set up payment dashboards for sellers, and analyze the actual demand against resource capacity schedules.

Current version	Legacy versions	Availability	Sandbox
v1 (Reference Model)	None	Sellers only	Static

About Facial Data

AUTHORIZATION

Authorize Applications

Renew Authorizations

Revoke Authorizations

Authorization Limits

The operations in the Services API fall into four categories:

Category	Operations
Getting Service Job Data	getServiceJobs getServiceJobByServiceJobId
Setting Service Job Appointments and Assigning Appointment Resources	addAppointmentForServiceJobByServiceJobId rescheduleAppointmentForServiceJobByServiceJobId assignAppointmentResources
Closing Service Jobs	setAppointmentFullfillmentData createServiceDocumentUploadDestination completeServiceJobByServiceJobId cancelServiceJobByServiceJobId
Setting Service Job Resource Capacity Schedules	updateSchedule createReservation updateReservation cancelReservation

The combination of operations a service seller requires depends on the specific case arranged between them and their Amazon business line partners.

For example, the operations in the Closing Service Jobs category may not be able to substitute for a field technician using an Amazon-required mobile app. Service sellers should consult their relevant Amazon business line partners to settle appropriate API usage scope before initiating integration with the Services API.

Use cases

The following use cases are available for the Services API:

- [Get Service Job data](#): Obtain Service Job data to determine the Jobs that require a service seller to take action and the Jobs that need additional API calls.

Special Authorization Types

>

- [Get service job appointment slots](#): Retrieve current appointment availability, available resource capacity, and existing jobs.
- [Setting service job appointments and assigning appointment resources](#): Add or reschedule appointments for service jobs, and assign appointment resources.
- [Closing service jobs](#): Set fulfillment data and set a job as complete.
- [Manage resource capacity schedules and reservations](#): Manage service resource capacity schedules and support appointment availability and reservations that exclude scheduled capacity from appointment availability.
