Welcome to SP-API Documentation

What is the Selling Partner API?

Selling Partner API Onboarding Overview >

Onboarding as a Developer >

Step 1: Prepare for Registration

Step 2: Create a Solution Provider Portal Account

Step 3: Create a Developer Profile

Step 4: Register a Sandbox Application

Step 5: Make Your First Call to the SP-API Sandbox

Step 6: Set up the Authorization Workflow

Step 7: Register Your Production Application

Step 8: Call the SP-API in Production

Step 9: Test Your Application

Step 10: List Your Application

Onboarding as a Service Provider >

Terminology

Frequently Asked Questions >

Step 1: Prepare for Registration

Gather the information and resources that you need to become an SP-API developer.

The Solution Provider

Portal is the central hub that you use to manage your Selling Partner API (SP-API) applications. Through the Solution Provider Portal, you create a developer profile that defines your organization's identity and intended use of the SP-API. Before you begin registration, review this guide and gather everything that you need.

Determine your developer type

Determine which developer category you fall into:

CHANGELOG

SP-API Release Notes

SP-API Deprecation Schedule

SP-API Product Metadata Updates

DIRECTORIES

SP-API Models

SP-API Seller Use Cases

SP-API Vendor Use Cases

Seller Central URLs

Vendor Central URLs

Learn How Sellers Authorize Service Providers

Selling Partner API Roles >

- **Public developer:**

You build applications for multiple selling partners. Your applications appear in the [Selling Partner Appstore](#) and require a complete security review.

- **Private developer:**

You build applications for your organization. These applications aren't listed in the Selling Partner Appstore and have a streamlined review.

Determine the roles that you require

Roles determine which API operations you can call. While you can submit additional role requests later, it's helpful to have a general idea of which roles you want to start with, because the developer profile registration form requires you to select which roles you might need:

- **Restricted roles:**

Provide access to personally identifiable information (PII)

Policies and Agreements

About Facial Data

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

Special Authorization Types >

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs >

Step 1: Prepare for Registration

and require enhanced security.

- **Unrestricted roles:** Handle general marketplace data with standard security requirements.

To identify the roles that you need:

1. Review the [roles overview](#) for a high-level understanding.
2. Browse the [role mappings documentation](#) to see which roles grant access to specific operations.

Gather the required information

Before you begin registration, have the following documentation ready.

For account creation and identity verification:

- Business information such as your company registration number and your registered business address
- Government-issued ID or passport

Delete an Application From Your Developer Account

CALLING THE SP-API

Configuration Details >

Call Structure >

Development Tools >

Performance Management >

- Recent bank or credit card statement

For developer profile setup:

- Use case descriptions
- If you require any restricted [roles](#), gather your security and compliance documentation, data handling documentation, implementation timeline and architecture, data retention policies

Review the required policies

The security and compliance framework for the SP-API is built on three core policies: the Acceptable Use Policy (AUP), the Data Protection Policy (DPP), and the Solution Provider Agreement. These policies help support the security and proper functioning of the SP-API and provide guidelines for responsible API usage. You must follow these policies to maintain your API access privileges. To review the policies, refer to
