Step 8: Call the SP-API in Production

Connect to the SP-API by using manual HTTP requests or an SDK.

After you test your application in the [sandbox](#) as much as possible, connect to the Selling Partner API (SP-API) production endpoint by making direct HTTP requests or by using an SDK.

For code samples for common use cases, refer to the [Selling Partner API samples](#) on GitHub.

Note

For information about SP-API fees, refer to [An Update on SP-API Fees](#) and [Understanding SP-API Metered and Unmetered Calls](#).

Prerequisites

Before you connect to the SP-API production endpoint, you must have the following prerequisites:

- The production endpoint for your target marketplace:
 - North America: <https://sellingpartnerapi-na.amazon.com>
 - Europe: <https://sellingpartnerapi-eu.amazon.com>
 - Far East: <https://sellingpartnerapi-fe.amazon.com>
- Your production credentials, which include:
 - Client ID:** The client ID that appeared after you registered your app in [Step 7: Register Your Production Application](#). To get this value, refer to [View your Application Information and Credentials](#).
 - Client secret:** The client secret that appeared after you registered your app. To get this value, refer to [View your Application Information and Credentials](#).
 - Refresh token:** The Login with Amazon (LWA) refresh token that you got when the selling partner authorized your application in [Step 6: Set up the Authorization Workflow](#).

Steps to connect to SP-API

Choose your connection method and perform the following steps.

Method 1: Make HTTPS requests

You can make direct HTTPS requests when you want complete control over API calls. This example shows a basic request.

Depending on your needs, you might also need to know about:

- Restricted operations (when you access customer data like shipping addresses)
- [Grantless operations](#) (when you don't need seller authorization, such as when you create or modify notification destinations)

For details about these scenarios, refer to [Connecting to the Selling Partner API](#).

1. Get an access token:

HTTP

```
POST https://api.amazon.com/auth/o2/token
Content-Type: application/x-www-form-urlencoded
```

```
grant_type=refresh_token
&refresh_token=YOUR_REFRESH_TOKEN
&client_id=YOUR_CLIENT_ID
&client_secret=YOUR_CLIENT_SECRET
```

2. Call the API with the required headers:

1. `host` : Your target endpoint
2. `x-amz-access-token` : Your access token
3. `x-amz-date` : Current timestamp
4. `user-agent` : Your application name and version

HTTP

```
GET https://sellingpartnerapi-na.amazon.com/sellers/v1/marketplaceParticipations
host: sellingpartnerapi-na.amazon.com
x-amz-access-token: YOUR_ACCESS_TOKEN
x-amz-date: 20250130T120000Z
```

Method 2: Generate and use an SDK

SP-API offers SDKs for C#, Java, JavaScript (Node.js), and Python.

These SDKs simplify integration by bundling multiple steps together, such as requesting access tokens and making API calls. For SDK documentation, refer to [SP-API SDKs](#).

Next steps

Proceed to [Step 9: Test Your Application](#).
