Submit a shipment invoice

Learn how to use the Shipment Invoicing API to submit a shipment invoice for Fulfillment by Amazon (FBA) orders in the Brazil marketplace.

Learn how to use the Shipment Invoicing API to submit a shipment invoice for Fulfillment by Amazon (FBA) orders in the Brazil marketplace.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The [Tax Invoicing \(Restricted\) Role](#) role assigned to your developer profile.
- The [Tax Invoicing \(Restricted\) Role](#) role selected in the app registration page for your application.
- The XML file from an invoice approved on SEFAZ.

Step 1. Encode the XML file in Base64

Convert the XML file into Base64. You need the Base64 encoding for [step 3](#).

Sample Java code

The following Java sample code takes a single input parameter `xmlPath` , which represents the file path, and returns the file's contents encoded in Base64 format.

```
Java
import java.nio.file.Files;
import java.nio.file.Paths;
import java.util.Base64;
import java.io.IOException;

public class XMLtoBase64 {
    public static String
```

Authorization Limits

Submit a shipment invoice

```

encodeXMLToBase64(String xmlPath) throws
IOException {
    byte[] xmlBytes =
Files.readAllBytes(Paths.get(xmlPath));
    return
Base64.getEncoder().encodeToString(xmlBytes);
}
}

```

Step 2. Calculate the invoice's MD5 digest

Calculate a Content-MD5 digest for the invoice XML file. You need this value for [Step 3](#).

Sample Java code

The following Java sample code takes a single input parameter `filePath`, which represents the path to the file for which you must calculate the MD5 digest, and returns a string containing the Base64-encoded MD5 digest of the file's contents.

Java

```

package com.util.hash;

import org.apache.commons.codec.binary.Base64;
import java.io.*;
import java.security.MessageDigest;
import java.security.NoSuchAlgorithmException;
import java.util.logging.Level;
import java.util.logging.Logger;

public class HashGenerator {
    private static final Logger LOGGER =
Logger.getLogger(HashGenerator.class.getName());

    public static String
computeMD5HashFromFile(String filePath) {
        try (FileInputStream fis = new
FileInputStream(filePath)) {
            MessageDigest md =
MessageDigest.getInstance("MD5");
            byte[] buffer = new byte[8192];
            int bytesRead;
            while ((bytesRead =
fis.read(buffer)) != -1) {
                md.update(buffer, 0, bytesRead);
            }
            return
Base64.encodeBase64String(md.digest());
        } catch (IOException |
NoSuchAlgorithmException e) {
            LOGGER.log(Level.SEVERE, "Error
computing MD5 hash for file: " + filePath, e);
            throw new RuntimeException("Failed
to compute MD5 hash", e);
        }
    }
}

```

Special Authorization Types

Step 3. Submit the invoice

Submit the invoice by calling `submitInvoice`. Specify the Amazon Shipment ID in the `shipmentId` path parameter, the Base64-encoded invoice in the `InvoiceContent` body parameter, and the MD5 digest in the `ContentMD5Value` body parameter.

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs

Step 4. Check the invoice submission status

Check the invoice status by calling `getInvoiceStatus`. Specify the Amazon Shipment ID to verify that the invoice submission was successful.
