Submit an inventory update

Learn how to use the Vendor Direct Fulfillment Inventory API to submit an inventory update.

Learn how to use the Vendor Direct Fulfillment Inventory API to submit an inventory update. There are two types of inventory feeds that can be submitted using this API. When `isFullUpdate` is set to true, the feed is a full update. When `isFullUpdate` is set to false, the feed is a partial update to inventory.

When you choose a full update, the operation updates the complete inventory for a specific warehouse. You must send information about all items in the warehouse. For any items not included, the Available Quantity will be updated to zero. This operation should

CHANGELOG[SP-API Release Notes](#)[SP-API Deprecation Schedule](#)[SP-API Product Metadata Updates](#)**DIRECTORIES**[SP-API Models](#)[SP-API Seller Use Cases](#)[SP-API Vendor Use Cases](#)[Seller Central URLs](#)[Vendor Central URLs](#)**REGISTRATION**[SP-API Registration Overview](#) >[Developer Registration Request Status](#)[Third-Party Provider Registration](#) >[Service Provider Registration and Role Approval Process Overview](#)[Website Guidelines for Public Developers and Service Providers](#)[User Permissions for Service Providers](#)[Register your Application](#)[Update your Application Information](#)[Rotate your Application's LWA Credentials](#) >[View your Application Information and Credentials](#)[Learn How Sellers Authorize Service Providers](#)[Selling Partner API Roles](#) >

only be used to perform a full warehouse synchronization, and should only be used if you don't have the ability to update the inventory for out of stock items to zero. If you can manage inventory for all your items, Amazon *does not recommend* that you choose a full update.

When you choose a partial update, you update only the inventory of selected items in a warehouse. This is typically called every few hours to update the items which are going out of stock or went out of stock since last update.

Verification of successfully submitted order inventory feeds

Vendors can verify the status of an inventory update using Vendor Central or using the Transaction Status API. For more information about how to use the Transaction Status API, refer to the business use case documentation for the Transaction Status API. Allow the system to

take up to 15 minutes to show the original/updated version after submission. If Vendor Central is not showing the correct values for the acknowledgement, open a [Contact Us](#) case in Vendor Central.

The following diagram shows the integration workflow for submitting inventory updates.

Business requirements

One inventory feed is required for each warehouse. If a vendor has multiple warehouses, then multiple inventory feeds submissions are

Delete an Application From Your Developer Account

required, with each feed containing items for a given warehouse.

CALLING THE SP-API

Configuration Details

>

For a full update, all the items in the warehouse which are in stock should be submitted. Any items not submitted will have their availability is set to zero in Amazon, and no new orders will be issued for those non-available items.

Call Structure

API Usage Metrics in Solution Provider Portal

When an item's status is set to obsolete using the `isObsolete` request body parameter, the item is marked as permanently unavailable. If the item becomes available and is back in stock, you must set `isObsolete` to false so that the item is marked as back in stock.
