Submit an invoice for Delivery by Amazon and Self Ship orders

Learn how to submit an invoice for Delivery by Amazon and Self Ship orders.

Learn how to submit an invoice for Delivery by Amazon and Self Ship orders.

! Important

The `submitInvoice` operation is in Restricted Availability (RA) status and only available in the Brazil (BR) marketplace.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The [Tax Invoicing \(Restricted\)](#) role assigned to your developer profile.
- The [Tax Invoicing \(Restricted\)](#) role selected in the app registration page for your application.
- The XML file from an invoice approved on SEFAZ.
- Integrated development environment (IDE) software

Step 1. Convert the XML file to Base64 format

To convert the XML file into Base64 format, use the following Java sample code. The Java sample code takes a single input parameter `xmlPath`, which represents the file path, and returns the file's contents encoded in Base64 format. You need the Base64-encoded invoice for [Step 3. Submit the invoice](#).

Sample Java code

AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

Java

```
import java.nio.file.Files;
import java.nio.file.Paths;
import java.util.Base64;
import java.io.IOException;

public class XMLtoBase64 {
    public static String encodeXMLtoBase64(String
xmlPath) throws IOException {
        byte[] xmlBytes =
Files.readAllBytes(Paths.get(xmlPath));
        return
Base64.getEncoder().encodeToString(xmlBytes);
    }
}
```

Step 2. Get the invoice's MD5 hash

To get the invoice's MD5 hash, use the following sample Java code. The Java sample code takes a single input parameter `filePath`, which represents the path to the file for which you must calculate the MD5 hash. The code returns a string that contains the Base64-encoded MD5 hash of the file's contents. You need this value for [Step 3. Submit the invoice](#).

Sample Java code

Java

```
package com.util.hash;

import org.apache.commons.codec.binary.Base64;
import java.io.*;
import java.security.MessageDigest;
import java.security.NoSuchAlgorithmException;
import java.util.logging.Level;
import java.util.logging.Logger;

public class HashGenerator {
    private static final Logger LOGGER =
Logger.getLogger(HashGenerator.class.getName());

    public static String
computeMD5HashFromFile(String filePath) {
        try (FileInputStream fis = new
FileInputStream(filePath)) {
            MessageDigest md =
MessageDigest.getInstance("MD5");
            byte[] buffer = new byte[8192];
            int bytesRead;
            while ((bytesRead = fis.read(buffer))
!= -1) {
                md.update(buffer, 0, bytesRead);
            }
            return
Base64.encodeBase64String(md.digest());
        } catch (IOException |
NoSuchAlgorithmException e) {
            LOGGER.log(Level.SEVERE, "Error
computing MD5 hash for file: " + filePath, e);
        }
    }
}
```

```
        throw new RuntimeException("Failed to
compute MD5 hash", e);
    }
}
```

Step 3a. Submit the invoice for a Delivery by Amazon order

Call the `submitInvoice` operation. Specify the `orderId`, `MarketplaceId`, `invoiceType`, `programType` as `EasyShip`, `invoiceContent` (set to the Base64-encoded invoice) and `contentMD5Value` (set to the MD5 hash).

```
HTTP
POST /delivery/2022-07-01/invoice?orderId=952-
2412493-8803068 HTTP/1.1
Host: sellingpartnerapi-na.amazon.com
x-amz-access-token: Atza|IwEBI...
Content-Type: application/json

{
  "invoiceContent":
"PD94bWwgdMVyc2lvbj0iMS4wIiBlbmNvZGluZz0iVVRGL...",
  "contentMD5Value": "hESktZUvxVHQHDl52l9d/g==",
  "invoiceType": "Outbound",
  "programType": "EasyShip",
  "marketplaceId": "A2Q3Y263D00KWC"
}
```

Step 3b. Submit the invoice for a Self Ship order

Call the `submitInvoice` operation. Specify the `orderId`, `MarketplaceId`, `invoiceType`, `programType` as `SelfShip`, `invoiceContent` (set to the Base64-encoded invoice) and `contentMD5Value` (set to the MD5 hash).

```
HTTP
POST /delivery/2022-07-01/invoice?orderId=952-
2412493-8803068 HTTP/1.1
Host: sellingpartnerapi-na.amazon.com
x-amz-access-token: Atza|IwEBI...
Content-Type: application/json

{
  "invoiceContent":
"PD94bWwgdMVyc2lvbj0iMS4wIiBlbmNvZGluZz0iVVRGL...",
  "contentMD5Value": "hESktZUvxVHQHDl52l9d/g==",
  "invoiceType": "Outbound",
  "programType": "SelfShip",
  "marketplaceId": "A2Q3Y263D00KWC"
}
```
