Submit an invoice

Learn how to use the Vendor Direct Fulfillment Payments API to submit an invoice.

Learn how to use the Vendor Direct Fulfillment Payments API to submit an invoice. The `submitInvoice` operation allows vendors to submit vendor invoices to request payment from Amazon for items shipped. Using this API, vendors can submit multiple invoices in a single API call.

Items should be invoiced only after they are confirmed and shipped. Otherwise, the invoice is rejected. An invoice with correct information is processed by Amazon without any human interaction, which means that the vendor receives payment more quickly. Invoices with incorrect information are rejected in Amazon's payee system. To learn how to create invoices with correct information, refer to the [business requirements](#) section.

Account configuration

To use the Vendor Direct Fulfillment Payments API, Amazon must configure the vendor account. Go to [Vendor Central](#) and from the **Support** page, select the **Contact Us** button to request account configuration.

Parallel testing of invoice submission

After you complete the API invoice integration, our Accounts Payable (AP) department requires you to send one successful API invoice in production before considering you as live. If there are any issues with your initial production invoice, our AP team will contact you. After the API invoice is integrated into production, you must send invoices via API only. If you want to return to using just the Vendor Central option, contact us to update your account. Before finalizing your API invoice integration, submit all invoices with a "Non-submitted" status in your account under the **Payments** tab in the Direct Fulfillment invoices section. Existing invoices with the "Non-submitted" status might be rejected and not paid if sent via API.

Verification of successfully submitted Invoices

The Transaction Status API doesn't show the actual status of invoice processing, it only shows the status of the semantic validations of the submitted invoices. Vendors can verify the actual status of the original/updated version of the invoices via **Vendor Central > Payments > Direct Fulfillment Invoices**. For more information on how to use the Transaction Status API, refer to the business use case documentation for Transaction Status. Allow the system to take up to 15 minutes to show the original/updated version after submission. If Vendor Central is not showing the correct values for the updated invoice, open a **Contact Us** case in [Vendor Central](#).

The following diagram shows the integration workflow for submitting invoices for direct fulfillment confirmed and shipped orders:

Business requirements

`Invoice numbers` must be unique, and they should never be reused (even after one year).

If an invoice sent using the API has failed due to incorrect data, but a paper invoice has the correct data, then the vendor should update the invoice through the API with the correct data using the same `Invoice ID`.

If an invoice has incorrect data (both paper and API) then the invoice is canceled and a new invoice should be sent with a new `Invoice ID`.

An invoice with a `total amount` = 0 should not be sent, as this would cause the invoice to fail.

Amazon requires the full address details in the address segments for tax compliance reasons. This is especially important for the bill-to party. For this segment the Amazon Payee system requires an exact match. For a complete list of Amazon bill-to party addresses and JSON code examples, refer to [SP-API Bill-to Party Addresses](#). If you do not know the Amazon Tax ID for a bill-to location, go to [Vendor Central](#) and from the **Support** page, select the **Contact Us** button to create a case.

- Payment terms sent in an invoice should match the payment terms agreed upon with the Amazon buyer.
- Item product identifier must match the order item product identifier that was sent to the vendor in the matching purchase order.
- The invoice total amount should be equal to the total sum of the items, charges, and allowances.
- The total of the tax amount for each line level must be equal to the total of the tax amount at the header level.
- The invoice total quantity should match the sum of the quantity of all items.
- Every different charge and allowance must be itemized on the header level (for example, freight charge, package charge, small ordering charge).

Country-specific business requirements

Invoices for Direct Fulfillment are not supported in India via the API.

Functionality	India	Europe	North America
Invoice type	Not supported.	Invoice type should always be Invoice .	Invoice type should always be Invoice .

		additional details for special purposes. For example, in the case of Polish split payment invoices, the selling party must send in the detail "mechanizm podzielonej płatności" of type "SUR" and languageCode "PL".	
referenceNumber	Not supported.	Not used.	Not used.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role assigned to your developer profile.
- The [Direct-to-Consumer Shipping \(Restricted\)](#) role selected in the app registration page for your application.

Submit an invoice

To submit one or more invoices, call the `submitInvoice` operation.
