AUTHORIZATION

Authorize Applications >

Renew Authorizations

Revoke Authorizations

Authorization Limits

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API Applications](#).
- The [Vendor Retail Procurement Invoices role](#) assigned to your developer profile.
- Complete [parallel testing with our payments system](#).

You must also meet the following business requirements for `submitInvoices` :

- [General business requirements](#)
- [Country-specific business requirements](#)

Parallel testing of invoice submission

You need to complete parallel testing with our payments system before you can start using the `submitInvoices` operation for payment processing.

When you begin sending invoices using the API, the parallel testing phase begins. During the parallel testing phase, you send Vendor Central and API invoices for all orders shipped. You are required to parallel test until the content of at least three invoice files are validated. Parallel testing is conducted with production purchase orders and invoices.

The Amazon Accounts Payable (AP) team contacts you when parallel testing is complete, or if there are any content discrepancies in your invoices.

When you receive an email saying parallel testing is complete, you no longer need to send Vendor Central invoices; you can use the API to send invoices.

General business requirements

- For items priced by weight, you must provide the `totalWeight` field. The `totalWeight` field contains the aggregate weight of the item that is invoiced. Additionally, the `netCostUnitOfMeasure` field must reflect the unit of measure for the items that you price by weight. The unit of measure values include `POUNDS` , `OUNCES` , `GRAMS` , and `KILOGRAMS` .
- **Invoice numbers** must be unique and must never be reused.
- If an invoice sent by API fails due to incorrect data, but a Vendor Central invoice has the correct data, then you must update the invoice through the API with the correct data using the same **Invoice ID**.
- When you submit incorrect invoice data through either Vendor Central or the API, Amazon cancels the invoice. Send a new invoice with a new **Invoice ID**.
- Invoices with `total amount = 0` fails.

Special Authorization Types

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs

- Include complete address details in all address segments to comply with tax requirements. If you do not know the Amazon Tax ID for a bill-to location, refer to the [Vendor Central](#) help pages. The bill-to party address must match exactly with the Amazon Payee system. To view all valid addresses, refer to [SP-API Bill-to Party Addresses](#). You can also find this list, including Amazon's tax IDs, on the **EDI Resources help page** in your Vendor Central account.
- **Payment terms** sent in an invoice must match the payment terms agreed upon with the Amazon buyer.
- **Item product identifier** must match the order item product identifier that was sent to the vendor in the matching purchase order.
- The invoice **total amount** must be equal to the total sum of the items, charges, and allowances.
- Total of **tax amount** for each line level must be equal to total of tax amount at the header level.
- The invoice **total quantity** must match the sum of the quantity of all items.
- Each different **charges and allowance** must itemize on the header level (for example freight charge, package charge, and small ordering charge).

! Warning

The remit-to address must match the address that Amazon has on file. If the address doesn't match, the invoice fails.

Submit an invoice

Call the `submitInvoices` operation to request payment from Amazon for items shipped.

Items must be invoiced only after they are confirmed and shipped to Amazon. Otherwise, the invoice is rejected.

An invoice with correct information is processed by Amazon without any human interaction, which means that you receive payment more quickly.

Invoices with incorrect information are rejected in Amazon's payee system, so sending correct information is important. Refer to the [General business requirements](#) to learn how to create invoices with correct information.

 Note

An invoice can be successfully submitted, then rejected. If your invoice is rejected after a successful submission, you will receive an email with details about why it was rejected.

Bill-to-party addresses

When submitting an invoice, bill-to party address details must be complete and formatted correctly, or the API call fails. If you do not know the Amazon Tax ID for a bill-to location, refer to the [Vendor Central](#) help pages.

For a complete list of Amazon bill-to party addresses and JSON code examples, refer to [SP-API Bill-to Party Addresses](#). You can also find this list, including Amazon's tax IDs, on the **EDI Resources help page** in your Vendor Central account.

Invoice with multiple items with no tax

You can call the `submitInvoices` operation to submit multiple invoices in a single API call.
