Submit shipment confirmation

Learn how to submit shipment confirmations (Advance Shipment Notifications, or ASNs) to Amazon.

You can use the `SubmitShipmentConfirmations` operation to submit shipment confirmations (Advance Shipment Notifications, or ASNs) to Amazon.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API Applications](#).
- The [Vendor Retail Procurement Shipments role](#) assigned to your developer profile.

You must also meet the following business requirements for `SubmitShipmentConfirmations`:

- [General business requirements](#).
- [Date and lot number requirements for perishable items](#).

With your shipment confirmation Amazon can efficiently receive and process your shipments. It contains information about the items being shipped, including purchase order number, ship date, estimated delivery date, lot number, expiration date, and the [Serial Shipping Container Code \(SSCC\)](#).

Shipment confirmations improve collaboration with carriers for tracking shipments. This improves labor planning and speeds up receiving, which accelerates invoice processing. Amazon tracks incoming inventory and generates automated orders to prevent stockouts. Shipment confirmations show in-transit products, displaying accurate item availability to customers. Amazon's policies allow cancellation of outstanding shipments, so accurate confirmations flag in-transit orders in internal systems. This reduces unnecessary cancellations, chargebacks, and freight refusals.

By receiving a valid and timely shipment confirmation, we can correctly anticipate the shipments you send us.

The lack of valid shipment confirmations can result in:

- Inadequate visibility for incoming shipments.
- Errors in reconciling the physical shipments with purchase orders.
- Manual follow-ups to resolve discrepancies.
- The need to provide proof of delivery (PODs) for invoicing.

General business requirements

- When a vendor ships items that are sold by weight, they must provide the `totalWeight` field. The `totalWeight` field contains the weight of the items that the

vendor ships and the weight unit of measurement. The weight unit of measurement values include `POUNDS` , `OUNCES` , `GRAMS` , and `KILOGRAMS` .

- There is a limit of 100 shipment confirmations for every truckload shipment (FTL). This means you can send separate shipment confirmation at the purchase order level, or carton level, only if the total number of individual shipment confirmations is less than or equal to 100 for that truckload or less than truckload (LTL) shipment. We recommend that you send a single shipment confirmation for the entire FTL or LTL shipment, including all purchase order and carton details.
- Amazon must receive the shipment confirmation prior to the product being received at the Amazon fulfillment center. Missing or delayed shipment confirmations result in chargebacks.
- For Small Parcel Shipments, a shipment confirmation is required for every package/carton.
- Container-specific information (such as `purchaseOrder` , `lotNumber` , expiry references, `regulationReferences`) should be provided in the `itemDetails` array of the `packedItems` object for each specific container (pallet or carton). Avoid providing this information in the `itemDetails` array of the `shippedItems` object.
- The following are required by Amazon and are measured to track compliance:
 - For palletized deliveries, you must send a shipment confirmation before requesting a delivery slot at the Amazon fulfillment center, because appointments require a valid shipment confirmation in the Amazon systems. For exceptions, refer to the local shipment confirmation **Help** pages to understand the available options. For parcels, the shipment confirmation needs to be submitted before items are shipped. Missing or delayed shipment confirmations result in chargebacks.
 - A shipment confirmation must be for one delivery, from one vendor and for only one truck. Shipments in multiple trucks, to multiple Amazon fulfillment centers, from multiple vendor accounts, or with arrivals on multiple days require multiple shipment confirmations.
 - If several smaller shipments for the same vendor account are combined in a larger shipment, and multiple shipment confirmations are required, you can use the umbrella BOL option as shown in the following example:

Shipment confirmation 1:

```
JSON
{
  "billOfLadingNumber": "BOL1"
  "shipmentIdentifier": "SHIPMENT_CONFIRMATION_ID1"
}
```

Shipment confirmation 2:

```
JSON
{
  "billOfLadingNumber": "BOL1"
  "shipmentIdentifier": "SHIPMENT_CONFIRMATION_ID2"
}
```

Serial Shipment Container Code (SSCC)

Amazon processes receipts using a highly automated approach called License Plate or LP Receive and this process requires that you provide carton content details in your shipment confirmation messages. This required receive process scans a Serial Shipment Container Code (SSCC) barcode on the outside of a carton or pallet of received items, eliminating the need to scan each item within the carton or pallet. This process has a number of significant advantages, including increased efficiency, improved receiving accuracy, more accurate payment, and faster payment cycle time.

You can choose a technical solution, as Amazon decided not to strictly follow the GS1-128 solution. To be compliant with Amazon License Plate requirements, a SSCC must be a unique 18-digit code that defines a pallet or carton, it cannot be repeated within 365 days, and must include a barcode on both the carton label and in the shipment confirmation message. Additionally, the barcode on the physical label has to match 100% with the SSCC in shipment confirmation. Vendors who want to implement GS1-128 are asked to add a 00 at the beginning of their SSCC within the shipment confirmation.

For more information about generating an SSCC and the requirements for the physical shipment, refer to [Vendor Central](#). To locate the Vendor Manual with labelling requirements, select **Shipping**, then **License Plate label and receiving requirements**.

Date and lot number requirements for perishable items

Perishable items must be sent at item level. Cases and pallets can contain multiple items (ASINs) with individual dates or lot numbers. One item (ASIN) cannot have multiple dates or lot numbers within the same case or pallet. Dates must be in YYYYMMDD format.

The following fields are mandatory for perishable items where the `isExpirationDatedProduct` attribute is `Yes` on the new item set-up (NIS) form.

Expiration date

The expiration date determines the limit of consumption or use of a product based on the trade item context. For food, this indicates possible direct health risk after the date; for pharmaceuticals, it indicates possible indirect health risk from product ineffectiveness. Also referred to as "use by date" or "maximum durability date."

Shipment identification

This field is a unique ID (uniqueness is defined within the context of the vendor) that represents this shipment confirmation. Failure to provide a **Shipment Identification** results in the shipment confirmation being rejected. Ensure that the ID being sent is not used in the last 365 days.

Manufacturing date

The date goods were packaged or manufactured. Required for perishable items or items with defined shelf life.

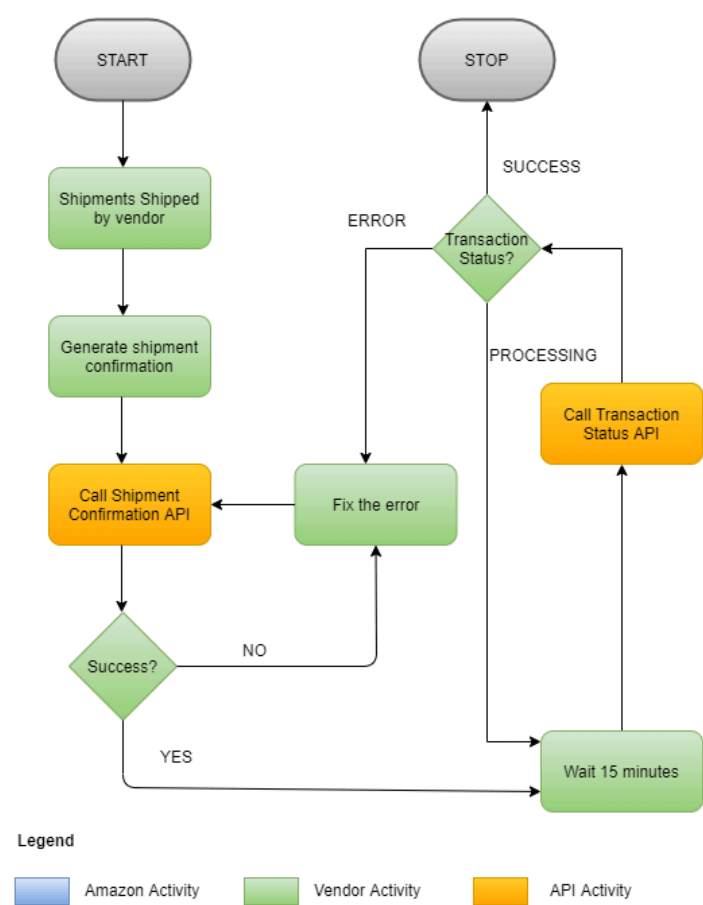

Lot number

The batch or lot number associates an item with manufacturer traceability information for the item or its ingredients. Can indicate production lot, work shift, machine, time, or internal production code.

Verify successfully submitted shipment confirmations

You can verify the status of your original or replaced shipment confirmations using the [Vendor Central](#). Select **Orders**, and then **Shipments** or by using Transaction Status API. It can take the system up to 30 minutes to show the original/replaced version after submission. If the [Vendor Central](#) is not showing the correct values for the replaced shipment confirmation, open a **Contact Us** case in the [Vendor Central](#).

The following diagram shows the integration workflow when submitting shipment confirmations.

shipmentConfirmationType of type replace

When a shipment confirmation has a `shipmentConfirmationType` of `replace`, you can correct previously submitted shipment confirmations by sending an updated version. The second shipment confirmation call overwrites the first shipment confirmation data if the `shipmentIdentifier` and `sellingParty.partyId` are identical for both transactions.

MERCHANT FULFILLMENT API

Merchant Fulfillment API

The main advantage is to improve booking accuracy by updating faulty shipment confirmations after initial submission.

You must send a second shipment confirmation in order to replace a previously submitted shipment confirmation. The `shipmentIdentifier` and `sellingParty.partyId` need to be identical for both transmissions.

Regulatory compliance requirements for product shipment

Products subject to specific compliance regulations require additional regulatory reference data to satisfy legal requirements and must be transmitted using the Shipment Confirmation API. These products are identified by specific attributes in their product catalogue that mark them as regulatory in-scope based on factors such as material composition or product type.

EU Deforestation-free Products Regulation (EUDR)

To comply with the EU deforestation-free products regulation (EUDR) and prevent the sale, import and export of products within the EU from contributing to global deforestation and forest degradation, in-scope products must include EUDR Due Diligence Information (DDI). This information should first be submitted to Amazon through **Vendor Central**, then select **Items** and then **Manage Product Compliance**.

When using Submit Shipment Confirmation API, you must provide the already registered reference at either of these two levels:

- At the lot number level: Traceability information is provided through the `LotNumber` field within the item details section of the `packedItems` object.
- At the shipment-assigned level: Due diligence reference information must be included within the `regulationReferences` object to ensure complete regulatory compliance for the entire shipment within the given Due Diligence reference options.
