Track a partially fulfilled order

Learn how to track a partially fulfilled order for items that are low inventory.

Learn how to track a partially fulfilled order for items that are low inventory.

Prerequisites

To complete this tutorial, you need:

- Authorization from the selling partner for whom you are making calls. Refer to [Authorizing Selling Partner API Applications](#) for more information.
- The [Amazon Fulfillment role](#) assigned to your developer profile.
- The [Amazon Fulfillment role](#) selected in the App registration page

for your
application.

Learn How Sellers Authorize Service Providers

Selling Partner API Roles >

Step 1. Get a fulfillment preview

Call the

[getFulfillmentPreview](#)

operation with two line items and make sure they are available for a given shipping option (Standard, Expedited, or Priority).

An unsuccessful response has a non-2xx code and includes the following objects. If the `PackageNumber` does not exist, a 404 response provides the ineligibility errors.

Step 2. Create an MCF outbound order

Call the

[createFulfillmentOrder](#)

operation with a unique Order ID and at least two line items, or one line item with a quantity greater than 1 for the same shipping option.

Step 3. Validate the order details

Call the

[getFulfillmentOrder](#)

SP-API SDKs

Track a partially fulfilled order

[r](#) operation to validate that

`fulfillmentAction` is equal to `Ship` and `fulfillmentOrderStatus` is equal to `Received`.

Step 4. Order status changes

The order goes through status changes from

`Planning` to `Processing` to `Complete`, in case one or more items do not have enough inventory as requested in the `createFulfillmentOrder` operation. To get status change updates, subscribe and listen to [FULFILLMENT_ORDER_STATUS](#) notifications.

Step 5. Get the fulfillment order to view the latest order details

After the order is `Shipped`, the order status notification for `Complete` is triggered. Now call the [getFulfillmentOrder](#) operation to view the latest order details.

Step 6. Validate the order status

Delete an Application From Your Developer Account

and line item quantities

Validate that

`fulfillmentShipmentStatus` is equal to `Shipped` and `fulfillmentOrderStatus` is equal to `CompletePartialled`.

If there are items that have `unfulfillableQuantity` not equal to `0`, then the order is partially fulfilled.

Step 7. Get the package number

Copy the package number of the order from the `getFulfillmentOrder` response from [Step 5](#). There could be multiple package numbers based on the number of Amazon shipments for that order.

Step 8. Get the tracking details

Call the `getPackageTrackingDetails` operation using the package number from [Step 7](#) and get the complete tracking details of the package.
