Tutorial: Automate your SP-API Calls using prebuilt Java SDK

Automate your SP-API calls using prebuilt Java SDK.

This tutorial shows you how to install and integrate prebuilt Java SDK. You will learn the prerequisites required to install the prebuilt Java SDK and also view an example using the Selling Partner API for sellers.

The Java SDK is published on Maven Central and supports [Java 11 or higher](#). You can integrate Java SDK to your application using **Maven** or **Gradle**.

Step 1. Add the Java SDK dependency to your application

You can add the Java SDK dependency to your application using Maven or Gradle. You can get the latest SDK version from the [release version](#).

Maven

Add the following code as a dependency in the `pom.xml` file.

XML

```
<dependency>
<groupId>software.amazon.spapi</groupId>
<artifactId>spapi-sdk</artifactId>
<version>1.0.0</version>
</dependency>
```

Gradle

Add the following code as a dependency in the `build.gradle` file.

Groovy

```
implementation 'software.amazon.spapi:spapi-
sdk:0.1.0'
```

Revoke Authorizations

Authorization Limits

Step 2. Connect the Java SDK to SP-API

To connect the Java SDK to the SP-API, you must:

1. [Configure your Login with Amazon credentials](#)
2. Create an instance for a specific API
3. Call an operation

For an example, refer to the following sample code:

Java

```
// Configure LWA credentials
LWAAuthorizationCredentials credentials =
LWAAuthorizationCredentials.builder()
    .clientId("amzn1.application-
*****")
    .clientSecret("*****")
    .refreshToken("Atzr|*****")
    .endpoint("https://api.amazon.com/auth/o2/token")
    .build();

// Create an instance of Sellers API
SellersApi api = new SellersApi.Builder()
    .lwaAuthorizationCredentials(credentials)
    .endpoint("https://sellingpartnerapi-
na.amazon.com")
    .build();

// Call an operation from Sellers API
GetMarketplaceParticipationsResponse response =
api.getMarketplaceParticipations();
```

Report issues

You can report issues on [GitHub](#).
