# Tutorial: Automate your SP-API Calls using prebuilt PHP SDK

Automate your SP-API calls using prebuilt PHP SDK.

This tutorial shows you how to install and integrate prebuilt PHP SDK. You will learn the prerequisites required to install the prebuilt PHP SDK and also view an example using the Selling Partner API (SP-API) for sellers.

The PHP SDK is published on **Packagist** and supports PHP 8.3 or higher. The following steps help you install and integrate prebuilt PHP SDK.

## Step 1. Add the PHP SDK dependency to your application

Run the following command to add the PHP SDK dependency to your application using **composer**.

Bash

```
composer require amzn-spapi/sdk
```

## Step 2. Connect the PHP SDK to SP-API

To connect the PHP SDK to the SP-API, you must:

1. Configure your LWA credentials
2. Create an instance for a specific API
3. Call an operation

For an example, refer to the following sample code:

PHP

```
// Configure LWA credentials  
$lwaAuthorizationCredentials = new
```

Authorization Limits

```
LWAAuthorizationCredentials([
    "clientId" => "amzn1.application-
*****",
    "clientSecret" =>
"*****",
    "refreshToken" =>
"Atzr|*****",
    "endpoint" =>
"https://api.amazon.com/auth/o2/token"
]);

$config = new Configuration([],
    $lwaAuthorizationCredentials);
$config->setHost("https://sellingpartnerapi-
na.amazon.com");

// Create a new HTTP client
$client = new GuzzleHttpClient();

// Create an instance of Orders API
$api = new OrdersApi($config, null,
    $client);

// Call an operation from Orders API
$result = $api->getOrders($marketplace_ids =
    ['ATVPDKIKX0DER'],$created_after =
    '2024-01-01');
```
