Tutorial: Retrieve Merchant Shipping Templates

Learn how to use the Product Type Definitions API to view Selling Partner Merchant Shipping Templates and enhance listing quality.

This tutorial explains how to use the [Product Type Definitions API](#) to retrieve Merchant Shipping Templates. The Merchant Shipping Template is a table in [Seller Central](#) that the selling partner can use to create freight rules. Selling partners use Merchant Shipping Templates to map a SKU to a shipping template. Additionally, selling partners use Merchant Shipping Templates to get the correct freight cost, based on factors such as location, weight location, weight, and size. This workflow is not applicable for Fulfillment by Amazon (FBA) items. For more information on the Product Type Definitions API, refer to the following links:

- [Product Type Definitions API Use Case Guide](#)
- [Product Type Definitions API FAQ](#)

The following steps outline how to use the `merchant_shipping_group` attribute to retrieve Merchant Shipping Template names. This attribute contains information about the shipping template that the merchant has registered and configured in their [Seller Central](#) account. With this information, selling partners can map the correct shipping templates to the SKUs in your application.

Step 1. Set up your workspace

1. Import the [Product Type Definitions API Model](#). This API provides programmatic access to attribute and data requirements for product types in the Amazon catalog.
2. Set up the workspace with the `SellerId` credentials.

Step 2. Use Product Type Definitions to set API call parameters

1. Import the [Product Type Definitions API Model](#) and call the `getDefinitionsProductType` operation. To set the variables,

use the following table:

Key	Value
sellerId	{{sellerId}}
marketplaceIds	{{marketplaceId}}
productTypeVersion	LATEST
requirements	LISTING
locale	DEFAULT
version	LATEST
productType	PRODUCT

2. To retrieve an Amazon product type definition from the [Product Type Definitions API](#), call the `getDefinitionsProductType` operation and include the preceding parameters.

```
JSON
{
  "metaSchema": {
    "link": {
      "resource": "https://selling-partner-definitions-prod-iad.s3.amazonaws.com/schema/amazon-product-type-definition-meta-schema-v1.json/.....",
      "verb": "GET"
    },
    "checksum": "rZ/2Yep0np022S38ZdEiNQ=="
  },
  "schema": {
    "link": {
      "resource": "https://selling-partner-definitions-prod-iad.s3.amazonaws.com/schema/PRODUCT.json/.....",
      "verb": "GET"
    },
    "checksum": "Hi42HJF0EDK0SFY09SSje+Ibq5Xg=="
  }
}
```

The `getDefinitionsProductType` response contains the following:

1. `metaSchema` : Contains the link to retrieve the [Amazon Product Type Definition Meta-Schema](#) document. The link works for seven days.
2. `schema` : Contains the JSON schema link for the product type definition. The link works for seven days.
3. `checksum` : A hash of the schema (Base64 , MD5). Use it to verify schema contents, to identify changes between schema versions, and for caching.

For all response attributes, refer to the [Product Type Definitions API Use Case Guide](#).

Step 3. Explore the schema usage

1. Choose the `resource` URL under the schema attribute from [Step 2](#). This retrieves a full schema that contains attributes for the requested product type.

JSON

```
{
  "$schema": "https://schemas.amazon.com/selling-partners/definitions/product-types/meta-schema/v1",
  "$id": "https://schemas.amazon.com/selling-partners/definitions/product-types/schema/v1/PRODUCT",
  "$comment": "Amazon product type definition for PRODUCT product type",
  "$defs": {
    "marketplace_id": {
      "default": "ATVPDKIKX0DER",
      "editable": false,
      "hidden": true,
      "examples": [
        "Amazon.com"
      ],
      "type": "string",
      "anyOf": [
        {
          "type": "string"
        },
        {
          "type": "string",
          "enum": [
            "ATVPDKIKX0DER"
          ],
          "enumNames": [
            "Amazon.com"
          ]
        }
      ]
    }
  }
}
```

2. Search for the `merchant_shipping_group` attribute to find its requirements.

Call Structure

Development Tools

Performance Management

JSON

```
{
  "merchant_shipping_group": {
    "title": "Merchant Shipping Group",
    "description": "The ship configuration group for an offer. The ship configuration group is created and managed by the seller through the ship setting UI.",
    "examples": [
      "\\\"Heavy Bulky Products\\\", \\\"CN ShunFeng Delivery\\\""
    ],
    "type": "array",
    "minItems": 1,
    "minUniqueItems": 1,
  }
}
```

SELLING PARTNER APPSTORE

What is the Selling Partner Appstore?

List Your App on the Selling Partner Appstore

```
"maxUniqueItems": 1,
"selectors": [
  "marketplace_id"
],
"items": {
  "type": "object",
  "required": [
    "marketplace_id",
    "value"
  ],
  "properties": {
    "value": {
      "title": "Merchant Shipping Group",
      "description": "The ship configuration group for an offer. The ship configuration group is created and managed by the seller through the ship setting UI.",
      "editable": true,
      "hidden": false,
      "examples": [
        "Heavy Bulky Products, NCR Large Appliance Delivery"
      ],
      "type": "string",
      "enum": [
        "legacy-template-id",
        "9bc08e3b-0e9f-40c3-96c7-0098525b901b",
        "a5a0d872-be8c-4f0c-a51a-3647ae4bedf5",
        "64c92253-d0bf-4970-897c-98ba16eca63a"
      ],
      "enumNames": [
        "Migrated Template",
        "Modelo dos EUA",
        "US Template",
        "US Template-16"
      ],
      "maxLength": 100
    },
    "marketplace_id": {
      "$ref": "#/$defs/marketplace_id"
    }
  }
},
"additionalProperties": false
```

3. Review the array properties in the `merchant_shipping_group` to find the `enum` and `enumNames` that are available in the Merchant Shipping Templates.

! Important

The `merchant_shipping_group` attribute contains the following values:

1. `enum` : Provides the Merchant Shipping Templates keys.
2. `enumNames` : The [Seller Central](#) template values.
3. `legacy-template-id` : The first template created in a selling partner's [Seller Central](#) account.

Tutorial: Retrieve Merchant Shipping Templates

To find the corresponding `enum` and `enumNames` attributes, use the following index value table:

Index	enum	enumNames
0	legacy-template-id	Migrated Template
1	9bc08e3b-0e9f-40c3-96c7-0098525b901b	Modelo dos EUA
2	a5a0d872-be8c-4f0c-a51a-3647ae4bedf5	US Template
3	64c92253-d0bf-4970-897c-98ba16eca63a	US Template-16
JSON		
<pre>"enum": ["legacy-template-id", "9bc08e3b-0e9f-40c3-96c7-0098525b901b", "a5a0d872-be8c-4f0c-a51a-3647ae4bedf5", "64c92253-d0bf-4970-897c-98ba16eca63a"], "enumNames": ["Migrated Template", "Modelo dos EUA", "US Template", "US Template-16"]</pre>		

To ensure proper mapping between the Merchant Shipping Template and the SKU, pass the `enum` key (**not** the `enumNames` value) into the `PUT` or `PATCH` listing item, or the `JSON` listings feed.
