VAT Calculation Service

Learn how to use Amazon's VAT Calculation Service.

Amazon's VAT Calculation Service (VCS) provides sellers with VAT calculation services and invoicing functionality. Amazon Business sellers who enroll in our VAT Calculation Service can offer VAT-exclusive prices to Amazon Business customers.

 Note

VCS is only available in the following stores:
Ireland, Spain, United Kingdom, France,
Belgium, Netherlands, Germany, Italy,
Sweden, and Poland.

After you enroll, you get a **Downloadable VAT Invoice** badge for your offers, which increases the visibility of your products on Amazon Business. If you're located outside the EU and ship goods to from non-EU locations to customers within the EU (you act as an importer of records), your offers display a **Downloadable Receipt** badge.

If you choose to enroll in VCS, you can use Amazon-provided tax data to create your invoices. You then have the option to have Amazon automatically create invoices for you or, if you have the `invoice upload` feed type, you can create and upload your own invoices. If you don't want to enroll in VCS, you can use your own tax data to create your invoices, then upload them using Seller Central or SP-API. These options are outlined in the following flowchart.

- [Option 3 workflow](#): Use your own tax data to create invoices

Product Tax Code

When you enroll for VCS, you can provide a default Product Tax Code (PTC), which is used for VAT calculation on all offers. If you want to create some offers with a different PTC, you can also override this value at the SKU level using feeds. A `ProductTaxCode` attribute is present in `Product.xsd` (XML), the Inventory Loader, the Listing Loader, and the category-specific flat files, all of which are available in Seller Central.

Sending the Product Tax Code in feeds is optional and its possible valid values are listed in the category flat files.

The following is an example in XML. The element's name is `ProductTaxCode`.

```
XML
<Product>
  <SKU>mySKU0001</SKU>
  <StandardProductID>
    <Type>EAN</Type>

    <Value>XXXXXXXXXXXXXXXX</Value>
  </StandardProductID>

  <ProductTaxCode>A_GEN_TAX</ProductTaxCode>
  <Condition>

    <ConditionType>New</ConditionType>
  </Condition>
  <DescriptionData>
    <Title>MyBrand – Women Summer Sandals 35 C (M) EU/ 4 B(M) US Black</Title>
    <Brand>HB</Brand>
    ...
  </DescriptionData>
</Product>
```

Special Authorization Types

```
</DescriptionData>
...
</Product>
```

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs

The following image is a flat file example. The column's name is `product_tax_code`.

TemplateType=homeimprovement	Version=2016.1123	amazon.de vorgesehen. Verändern oder löschen Sie die obersten drei				b2b
Verkäufer-SKU	Hersteller-Barcode	Barcode-Typ	Titel	Marke	Steuernummer	Business-Preis
item_sku	external_product	external_product_id_type	item_name	brand_name	product_tax_code	business_price
mysku001	XXXXXXXXXXXX	EAN	Title	Brand	A_BOOKS_GEN	12

VAT not calculated

Amazon cannot calculate VAT for shipments that are missing a VAT number for the country from which the item was shipped. For these shipments, sellers must perform their own VAT calculation and upload the invoices to Amazon with the Feed type `UPLOAD_VAT_INVOICE` using the Feeds API. The method of uploading an invoice for such an order is exactly the same as described in **Section XXXXXXXXXXXXX**, except that Amazon does not perform any validation on the **TotalAmount** and **TotalVATAmount** fields. Sellers are expected to input a valid VAT amount based on what their tax advisor recommends.

★ Tip

For information about how Amazon calculates VAT, refer to [European VAT Calculation Services Methodology](#) and [VAT Calculation Service - FAQ](#).

For EU and UK PTCs and VAT rates, refer to [VAT Rates and My PTCs](#).

CALLING THE SP-API

Configuration Details

VCS prices

There is no change in price feeds when a seller is in the VCS program. For sellers enrolled in VCS, all prices must remain VAT inclusive in the price feed. VAT exclusive prices are automatically derived from the inclusive price. Offers from VCS sellers automatically show VAT-exclusive prices to Business Customers in search results, product detail, cart, and checkout pages.

Call Structure

Development Tools

★ Tip

If your SKU has special characters, such as a back or forward slash (\ , /), it requires URL encoding. You can do this programmatically. For example:

List Your App on the Selling Partner Appstore

```
import java.net.URLEncoder;
import java.nio.charset.StandardCharsets;
import
java.io.UnsupportedEncodingException*;

// Method to encode a SKU using the UTF-8
encoding scheme
private static String encodeSKU(String
sSKU) {
    try {
        return URLEncoder.encode(sSKU,
StandardCharsets.UTF_8.toString());
    } catch (UnsupportedEncodingException
ex) {
        e.*printStackTrace*()*;*
    }
}
```

Enroll in VCS

To use VCS, you must first enroll in Seller Central. After you enroll, you can create and upload invoices using your [preferred method](#).

You must comply with all applicable laws when you create invoices.

1. Go to the [Enroll in the VAT Calculation Service](#) page in the Seller Central.

Invoice Generation

Amazon will calculate the VAT amount based on your VAT calculation settings. You can either let Amazon generate the invoices on your behalf, or generate and upload them yourself. Your offers will show with a Downloadable VAT invoice badge.

☒ I want Amazon to automatically generate VAT invoices

Recommended

It is that easy. Invoices generated by Amazon will be available to your customers immediately after shipment. You will also be able to download these invoices for your records.

☐ I will upload my own VAT invoices

It is your responsibility to upload VAT invoices within one business day after shipment. If you do not upload the VAT invoice within one business day after shipment, Amazon may remove you from VAT calculation service, or suspend your account.

[How to upload invoices](#)

When do you want the tax settings to take effect?

Activation is for all sales on any Amazon marketplace for private and corporate customers. Once the tax calculation is active you should no longer send invoices directly to Amazon customers.

☒ Select a date

☐ Do not activate now

Note

The **I will upload my own VAT invoices** option is only available for sellers who work with solution providers that have implemented the **invoice upload** feed type.

2. Enter your VAT registration numbers.
3. Enter your default ship-from address for seller-fulfilled orders.
4. Enter the default Product Tax Code (PTC) for your products. In the absence of PTCs for offers, Amazon uses the default PTC to calculate VAT. For more information about the EU and UK PTCs and

[Edit Your Appstore Listing](#)[Check Listing Status](#)[Appstore Ratings and Reviews](#)[Press Releases and Promotions](#)**SERVICE PROVIDER NETWORK**[List Your Service](#)**SECURITY AND COMPLIANCE**[SP-API Security and Compliance Overview](#)[Amazon Selling Partner API Guard Implementation Guide](#) >

VAT rates, refer to [VAT Rates and My PTCs](#) in the Seller Central Help.

5. Choose an invoicing option. You can upload your own invoices or let Amazon create invoices on your behalf. Note that you only get the option to upload your own invoices if your third-party developer has implemented the VAT calculation service as described in this guide.
6. Choose an activation date for Amazon to begin calculating and displaying VAT-exclusive prices. If you chose the Amazon invoicing option, this is the date on which Amazon will begin creating invoices for all shipments. If you chose the self-invoicing option, this is the date that you are expected to begin uploading invoices for every shipment.
