Vendor Direct Fulfillment Workflow Guide

Integrate and use APIs supporting the Direct Fulfillment Program.

Amazon provides vendors with several APIs for the Direct Fulfillment business program. This guide summarizes the steps you can take to integrate with these Selling Partner APIs (SP-APIs).

Direct Fulfillment integration overview

Integrating with the Direct Fulfillment APIs starts with the vendor pulling the orders for fulfillment using the [Vendor Direct Fulfillment Orders API v1](#), then sending an acknowledgement for the order.

After the order is packed and ready to be shipped, the vendor uses the synchronous `createShippingLabels` operation to print a shipping label, and ships the order. After the order is shipped, a shipment confirmation is sent from the vendor to Amazon.

Vendor Direct Fulfillment Payments API	v1	Vendor Direct Fulfillment Payments API Use Case Guide
Vendor Direct Fulfillment Transactions API	v2021-12-28	Vendor Direct Fulfillment Transaction Status API Use Case Guide

To learn more about the terms that are used on this page, refer to [Terminology](#).

Prerequisites

To complete the following tutorials, you must:

- [Register yourself as a developer](#) with the [Direct-to-Consumer Shipping role](#)
- [Register your application](#)
- [Authorize your SP-API application](#)

Special Authorization Types

>

- [Test your application with sandbox endpoints](#)

INTEGRATION

Building Robust Amazon SP-API Applications

SP-API SDKs

>

 Note

Direct Fulfillment APIs support dynamic sandbox. Refer to the [Vendor Direct Fulfillment Dynamic Sandbox guide](#) and [demo video](#) for more details.

Tutorial: Fetch the list of Direct Fulfillment orders to fulfill and acknowledge the orders

Step 1. Retrieve the list of Direct Fulfillment orders to fulfill

 Note

This is a restricted operation and requires a Restricted Data Token (RDT) for authorization. Some operations require restrictions because they contain customer PII data. These operations require passing an additional security review. For more information on RDT, refer to the [Tokens API](#) guide.

Delete an Application From Your Developer Account

CALLING THE SP-API

Configuration Details

>

Call the `getOrders` operation to retrieve a list of new Direct Fulfillment purchase orders yet to be fulfilled. Use the parameters `createdBefore` and `createdAfter` to get the orders created within last 24 hours. The order status should be `NEW` to fetch un-acknowledged items.

>

**Fetch direct fulfillment orders to fulfill**[Open Recipe >](#)

Performance Management

>

Step 2. Acknowledge the order

You must provide an order acknowledgment code for all line items in order for Amazon to update the order status.

SELLING PARTNER APPSTORE

- What is the Selling Partner Appstore?
- List Your App on the Selling Partner Appstore

Using the `submitAcknowledgement` operation, acknowledge the orders. The purchase order can be accepted or rejected. Vendors should submit accurate acknowledgements as fast as possible, within at most 24 hours. You can also confirm the purchase order through Electronic Data Exchange (EDI) or Vendor Central.

Code sample

Acknowledge direct fulfillment order
Open Recipe >

You must submit a complete acknowledgement, including all purchase order line items in the purchase order. Partial acknowledgements are not accepted.

Step 3. Check order acknowledgement transaction status

Using the `getTransactionStatus` operation, check the transaction status of the `submitAcknowledgment` operation.

Code sample

Check transaction status
Open Recipe >

After you acknowledge the order, allow the system up to 15 minutes to show the status.

Tutorial 2: Generate shipping label and submit confirmations

Step 1. Get the shipping label

Get the shipping label for the order by using the `createShippingLabel` operation. This is a synchronous operation that creates and then returns the shipping labels for a purchase order.

Partial shipping label requests are rejected. Direct fulfillment does not allow partial fulfillment. Use one shipping label request for all the items in the order, even if the items cannot fit in one box. You must cancel the entire order if size or

weight limits prevent single-label shipping.

Code sample**Get Shipping Label**
Open Recipe >

You can generate one or more shipping labels for each purchase order. Multiple purchase orders in a single request is not supported.

**Note**

You can discard the shipping label if you no longer require it (for example, if you need to re-pack). You can submit a new shipping label request and call the `getShippingLabel` operation to retrieve the new label. In general, however, try to avoid discarding labels. Discarding labels can result in carrier pick-up issues and might negatively impact your metrics.

Step 2. Confirm the shipment

Use the `submitShipmentConfirmations` operation to confirm the shipment of a Direct Fulfillment order with the shipping information. Shipment confirmations allow Amazon to collaborate more effectively with carriers in tracking shipments.

Code sample**Confirm the shipment of a direct fulfillment order**
Open Recipe >**Step 3. Check shipping confirmation transaction status**

Use the `getTransactionStatus` operation to check the transaction status of the `submitShipmentConfirmations` operation.

After you submit the shipment confirmation, allow the system to take up to 10 minutes to show the status.

For more information about these APIs, refer to the [Vendor Direct Fulfillment Shipping API Use Case Guide](#).

Tutorial 3. Request payments from Amazon

Step 1. Submit invoices

Using the `submitInvoice` operation, the vendor sends the invoice to Direct Fulfillment to get payment released for the shipped items.

Important

Items should be invoiced only after they are confirmed and shipped. Otherwise, the invoice will be rejected, in which case the vendor must review the reason for rejection and submit a new invoice.

Step 2. Check invoice transaction status

Using the `getTransactionStatus` operation, check the transaction status of the `submitInvoice` operation. The Transaction Status API shows the status of the semantic validations of the submitted invoices; it doesn't show the actual status of invoice processing.

After you submit the invoice to Amazon, allow 15 minutes for the status to update.

Note

As a supplement to this guide, the [SP-API Direct Fulfillment Sample Application](#) provides complete end-to-end code and instructions to build and run the given sample codes using AWS services.
