What is the Selling Partner API?

Selling Partner API Onboarding Overview >

Verify that query processing is complete

Learn how to verify that processing has completed.

After you call the `createQuery` operation, Amazon receives the request and begins processing the query. Learn how to verify that processing has completed.

Step 1. Monitor the processing status

Periodically call the `getQuery` operation, passing the `queryId` value you received from `createQuery`, until the response contains a `processingStatus` value of one of the following:

- CANCELLED
- DONE
- FATAL

Terminology

Frequently Asked Questions >

The response also includes one of the following:

- A `dataDocumentId` value if data is available as a result of the query.
- An `errorDocumentId` value if there is an error while processing the query.
- Neither of these when there is no data returned as a result of processing the query.

If `processingStatus` is `IN_PROGRESS` or `IN_QUEUE` , then processing has not ended, and you should continue to poll the `getQuery` operation until `processingStatus` is `CANCELLED` , `DONE` or `FATAL` .
